THE SANITAS

PATENT

KITCHEN SINK AND FLUSH-POT

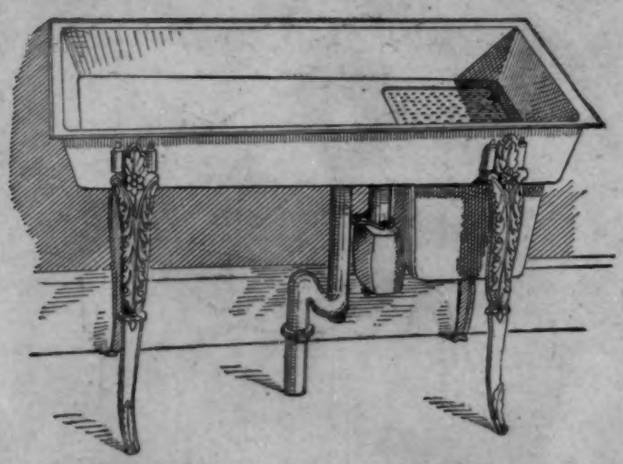

FIG. 45. The Sanitas Kitchen Sink and Flush-pot.

This device has successfully solved the problem of the disposal of kitchen and pantry waste water.

It is absolutely automatic in its action, and to this feature is largely due its great success.

It is so constructed that it must always do its work correctly and completely and it *cannot be made to do otherwise*, even by the greatest ignorance or neglect on the part of the user. It operates on the principle of the intermittent automatic flush tank, keeps the waste pipes clean, and obviates the necessity of using a grease trap. It is provided with an accessible seal-retaining trap constructed on the principle of the Sanitas Trap, and is altogether the only complete sanitary Kitchen Sink ever offered to the public.

SANITAS MFG. CO., 207 Tremont St., Boston, Mass.

Branch Offices: 54 Gold St., New York, N. Y. 197 West Fourth St., Cincinnati, O. 47 to 49 Dearborn St., Chicago, Ill. 511 Walnut St., St. Louis, Mo. Sole Agents for California: Arnold & Co., 40 California St. San Francisco. Sole Agent for Canada: O. Higman, 236 Sparks Street, Ottawa.

A SCHEME which has long been discussed in New York has finally taken definite shape, in the incorporation of the American Fine Arts Society, which includes representatives of the present Society of American Artists, the Architectural League, the Art Students' League, the Society of Painters in Pastel, and the New York Art Guild, and is to be maintained under the joint patronage and control of these societies, and of such others as may join the movement hereafter. The object of forming the new corporation is to give the societies interested a better opportunity than they have yet had for combining their efforts and influence for the purpose of promoting the good of the fine arts, in whatever way may seem advisable, and the first step toward that end which has occurred to the managers of the new society is to consist in the erection of a building, which is to contain rooms where works of art may be exhibited, as well as permanent accommodations for the various societies represented in the new federation. The rents have been fixed at the moderate rate of fifty cents per annum per square foot of floor-space occupied, for the portion permanently taken up by the societies, and twenty-five dollars a day for the use of the galleries. The New York daily papers say that this small sum pays for the use of all the galleries together, and that they are to be arranged to be used for concerts and other entertainments, as well as for exhibitions, so that we imagine that there must have been some slip in the original report, which we leave our readers to correct according to their own judgment. The capital to be used for carrying out this modest plan is fixed at fifty thousand dollars, and is to be raised by subscriptions of one hundred dollars each. Besides the stock, coupon bonds are to be issued, the interest on which is to be paid, if earned from rents, but if the rents should not be sufficient to pay the interest, the holders of the bonds, by surrendering their coupons, may obtain free tickets to the various exhibitions to be held in the building during the year. Beside the stock-holders and the bond-holders, there is to be a class of Fellows, who, by the contribution of one hundred dollars, are to be entitled through life to five season tickets to all the exhibitions given by the Architectural League, the Society of American Artists, and the Society of Painters in Pastel. The proceeds from the sale of such fellowships is to be devoted partly to extinguishing the bonded debt of the corporation, while the rest is to be distributed among the constituent societies in equitable proportion.

ANOTHER artistic association, with, however, a special purpose, which has just been formed in New York, is the National Free Art League, an organization of artists and other persons interested in art, intended to promote, by the number and character of its members, and the influence they may exert, the repeal of the unjust, ridiculous and injurious laws in regard to the importation of foreign pictures and statues which have so long annoyed our artists. The names of the officers of the League are in themselves sufficient to show the seriousness of the movement, and the energy with which it is likely to be carried on. The President is Mr. J. Carroll Beckwith, the Vice-President is Mr. William M. Chase, the Treasurer is Mr. Henry Marquand, and the Secretary is Mr. Kenyon Cox. Besides the officers, more than five hundred artists and lovers of art are enrolled as members, and many applications for membership are daily received. There are no membership dues, and persons interested in the purposes of the League are invited to send their names to the Secretary, Mr. Kenyon Cox, 145 West Fifty-fifth Street, New York, upon which they will be enrolled, upon signing the Articles of Association, and will be kept informed, from time to time, of the progress of the movement, and the success of the work undertaken by the League.

THE Brockton *Enterprise* makes some suggestions in regard to obtaining designs for a new city-hall for that town, which are open to criticism, in the interest of the citizens. It remarks that a competition among architects has been proposed, but says that the fear has been expressed that "an open race of the kind would only be entered by second-class architects, and that the big firms would not submit any plans." As the people of an ambitious and prosperous town like Brockton naturally want something better than second-class professional service, the *Enterprise* proposes to meet the difficulty by having the City-hall Committee do "as a similar committee has done in Haverhill," that is, "to advertise in the Boston papers that at a certain hour of a certain day they will be in session at the present City-hall to consult with architects who will submit plans for the proposed building." We should say that it would be well for the people interested, before following this advice, to find out what result such a course has had in Haverhill. Among respectable architects the idea of dancing attendance on "a certain day" upon a committee that does not know what it wants, and has taken no pains to find out, and can think of no better way of enlightening itself than to let a lot of builders' clerks and draughtsmen talk to it for an hour, all at the same time, would be about as uninviting as anything that could be proposed, unless, perhaps, it should be surpassed by the next piece of counsel offered by the *Enterprise*, which is that "the right to reject any or all, and not to pay for any not accepted, could be reserved," and it adds, as if it could think of nothing more enchanting to the professional mind than this prospect, that, "The more architects that compete, the better for Brockton."

WE had supposed that this way of thinking and talking about architects and competitions was obsolete in any civilized community. To show how absurd and ridiculous it seems to any one who knows anything about plans and buildings, we will suppose that, instead of a city-hall, the people of Brockton want a map of the town. They appoint a committee, which sets an hour on which all its members will be at leisure from their respective avocations, and invites engineers and surveyors to meet it. The first surveyor asks whether the town requires a topographical survey, or one showing merely boundaries. The committee reflects. None of its members have ever heard of a topographical survey, and have not the least idea what it may be, but they do not like to say so, and the name sounds well, so they answer that that is what they want. The next visitor is a scientific person, who thinks that the survey ought to be geological, and is made happy by being told that it will be an excellent thing to have it geological as well as topographical. Each of the other inquirers has a different idea, and all the ideas seem to the committee, which comprehends few of them, to be excellent. The intending competitors go back to their offices, each with a different notion of what is required, and set at work. At a given time a mass of plans, of the most diverse description, and involving immense labor, is presented to the bewildered committee. Even then, the idea of asking for advice from some

one who understands the subject does not occur to them, and after looking at the drawings, with a feeble pretence of understanding them, for a few hours, they adjourn. On reassembling, they find that a member has brought a friend along with him, a person of local reputation and influence, whom, after much persuasion, he had induced to "take part in the competition," and who has "brought in his plan." The "plan" is simply a collection of old plots, gathered partly from imagination, and partly from the Registry of Deeds, harmonized and "doctored" as the case may require, and with the streets dashed in with a bold hand. The author of this "design," which represents about half-a-day's work, explains that he is "no hand at making pretty pictures," but "looks to the common-sense of the thing," and stands, wreathed in smiles, while the delighted committee examines his production. As one after another discovers his grandmother's wood-lot on the plan, the satisfaction of the members increases, and without more ado, the chairman puts the vote, all the other plans are rejected, and the new comer is unanimously selected to prepare a map, which is only found to be incorrect and valueless after he has got his pay.

OF course, American committees will resent the idea that they are not perfectly capable of giving any instructions as to the preparation of designs for a city-hall, and of judging the designs after they are submitted, but the fact is that they are not capable of doing so, and architects know that they are not, and nearly all the most reliable architects in Massachusetts have agreed to have nothing to do with public competitions where their work is not to be judged by experts, and where the designs submitted are not to be made in accordance with a programme drawn up by competent hands, and issued to all alike, in which proper compensation is promised without reserve to the author of the best plan. Nothing else, as they know, offers any chance of satisfaction either to architects or to the people for whom they build. It ought not to be necessary to say that the essential part of a public building is the plan. With a good plan, a good building can be made with cheap materials; without a good plan, no expenditure of money can make a good building. On the plan of such a building depends not only whether large sums of money shall be buried forever in tortuous corridors, dark courts, useless space where it is not needed, and rooms too small for use, but whether an additional outlay shall be required every year for burning gas in places which "turned out" not to have daylight, and for extra service for overcoming inconveniences of arrangement; and no lay committee-man can judge for such details. Every architect has seen plans which pass muster with lay committees, in which important rooms are supposed to be illuminated by areas marked "Light and Air," in which there would be no more light or air than at the bottom of a well, while partitions stand over nothing, towers appear unexpectedly, supported on the roof, and the stairs in one story prove to be entirely independent of the story above or below. The only remedy for these inadvertences, after the building is executed, is a very costly process of remodelling. The best means of prevention, which is in this case a hundred times cheaper than cure, is the employment of a first-rate architect. From quacks in medicine a sick man may, with the help of his imagination, and, perhaps, a lucky chance, get relief from his pains, but the architectural quack cannot administer doses of brick and mortar at random with good effect, and he who would have his brick and mortar distributed judiciously, economically and beautifully must apply to persons capable of doing so, and must offer them what they consider fair treatment to obtain their services.

LA SEMAINE DES CONSTRUCTEURS publishes an account of a long-forgotten competition, which took place in Russia in the year 1764, when, we must remember, Russia was little better than an empire of Cossacks and Tartars. The city of St. Petersburg was at that time rapidly developing from a cluster of huts into the capital of a powerful government, and it was decided to try to improve it after some definite and well-considered plan. With this view, the Empress Catherine appointed a commission, which announced a competition on a model which might have been familiar then, but has, unfortunately, since gone out of use. All architects and amateurs in Russia were invited to furnish suggestions for a plan for laying out the city, a map of which was supplied them on application. Three months was allowed for the preparation of the sketches, which were to be handed in under cipher. The judgment which followed was the most curious part of the affair, for the jury consisted of all the people in Russia most skilled in the subject; namely, the competitors themselves. Immediately on the delivery of the sketches, they were to be exhibited for fifteen days in a place where all the competitors could have free access to them, and there each competitor was requested to examine them, and write a careful criticism of all the plans except his own, designating particularly the portions of each plan which appeared to him most successful and best adapted for carrying out. At the end of the appointed period the commissioners were to consider the designs and the criticisms, and decide for themselves what plans, or portions of plans, should be carried into execution, and it was promised that the authors of schemes, or parts of schemes, selected for execution should be employed, by preference, in carrying them out; while even those whose projects were not approved were to receive a compensation "in proportion to their labor." Whether this curious competition was ever carried so far as to the actual selection of a plan in the way promised we do not know, but some student of Russian history can, perhaps, inform us.

SOME unfortunate official in England recently took it into his head to improve Westminster Hall, which has long been a sort of neglected corner among the Government buildings, by putting a staircase in it, and, as he might have expected, has brought a storm of criticism and ridicule about his ears by doing so. It is very likely that nobody wanted the staircase for use, but that probably would have made no difference in the criticisms, which appear to be directed at everything, whether of any importance or not, which has any connection with the structure. As it happens, the unfortunate official in question, thinking to make the building under his charge more interesting, had some heraldic animals carved on the top of the newel-posts. He could hardly have put anything more innocent there, but no sooner had they appeared than a member rose in the House of Commons, to inquire "why those stone carvings of birds and beasts" had been put on the pedestals flanking the Westminster Hall stairs. The supervising official explained that the "birds and beasts" were simply heraldic objects, which were taken from the coats-of-arms of various Kings and Queens of England, and served to designate, in an indirect way, the sovereigns who had done most, since the time of William Rufus, for the improvement and decoration of the Hall. One would think that this answer would be enough for a sensible man, but it was not enough, it appears, for a member of the House of Commons, and a second question was propounded, inquiring whether "the Right Honorable gentleman was himself responsible for many of the fearful creatures in Westminster Hall." This sort of interpellation seems to have been too much for the temper of the "Right Honorable gentleman," who replied that "he was not responsible for the fearful creatures, either in Westminster Hall or in this House." "Much laughter" followed these elegant dialectics, and the original questioner, who appears to have felt that he had got the worst of the discussion, avenged himself by threatening to move for a reduction of his opponent's salary. Why the official did not retort by demanding an investigation into the state of his questioner's account with the washerwoman, we cannot see, but it is possible that a sense of decency may have come, somewhat late, to his aid. In fact, the circumstance that he had consented to putting anything so harmless as heraldic leopards on the newel-posts indicates that this may have been the case, while the well-regulated mind must shudder at the thought of the decorations that would have been suited to his opponent's taste, if their official positions had been reversed.

MR. A. W. BLOMFIELD, a well-known English architect, has just received the honor of knighthood, to the great satisfaction of the editor of the *Builder*, who thinks that architects in England have of late been altogether too much overlooked in the distribution of honors of the kind. It does not appear that any particular work of Mr. Blomfield's has earned for him this recognition, but, like most things of the kind in England, it seems to have been the long-delayed reward of many years of skilful and honorable practice. Americans know very little of the effect upon a man's happiness of the addition of a title to his name, but very many American architects, to whom his name and reputation are familiar, will be glad to join with the English friends of Sir Arthur Blomfield in congratulations suitable to the occasion.

OLD COLONIAL WORK OF VIRGINIA AND MARYLAND.[1] — II.

THE WYTHE HOUSE.

JUST north of the church-yard, and fronting upon a grassy open known as "Palace Green," on the upper side of which stood Lord Dunmore's house, or "the Governor's Palace," as it was called among the patriots of '75, stands a fine, old, square brick house which, the inquiring stranger will be informed, "was once General Washington's headquarters." Historical accuracy, however, resolves this tradition into the lesser fact that Washington spent the night at this house, the house of his friend George Wythe, on his way to join Lafayette at Yorktown in the latter part of September, 1781.

The old house is, however, quite interesting on its own account, and on going up to have a look at it, I was very courteously admitted, and had the pleasure of walking about the broad hall and large square rooms, and the further good fortune of hearing a sketch of the history and a legend or two about the old house, which, I think I cannot do better than transcribe here, as literally as may be.

The Wythe House, as this old homestead is called, was built by Colonel Louis Taliaferro and given as a marriage portion to his daughter, the wife of George Wythe, who, to quote one of his biographers, was "the pure and virtuous Chancellor, a member of the House of Burgesses, a signer of the Declaration of Independence, a Member of Congress, Speaker of the House of Delegates, Judge of the Court of Appeals, a member of the Conventions on the Constitution of the United States, and Professor of Law at William and Mary College. To him was reserved the honor of devising the emblems and motto of the shield of Virginia." Wythe enjoyed the intimacy of Jefferson, Mason, Washington, and, in short, of the brightest minds of his day in Virginia.

The Chancellor's end was a tragic one, for he was poisoned by a nephew to whom he had bequeathed a large portion of his property. Though he died in Richmond, Williamsburg claims his ghost, and it is said that on the anniversary of his death, the 8th of June, a shadowy form in antique garb glides from out the closet of his chamber in the old house, and a cold hand is gently laid upon the face of the sleepers in the room.

After the Chancellor's death the property passed into the hands of Mr. Henry Skipwith, the third husband of the beautiful Elizabeth Byrd, of Westover on the James.

The wraith of the fair Elizabeth, also, occasionally honors Wythe House with a manifestation, appearing in full ball dress, with sweeping train of rich brocade and high-heeled scarlet slippers with diamond buckles.

Yet another spectral tenant was known in the flesh as the consort of Governor John Page, who purchased Wythe House upon the death of Colonel Skipwith, and it is whispered that even the stately form of the Father of his Country himself, who was always a great friend of Wythe's, has been seen in the halls and on the broad stairway.

Time would fail me to tell of the wierd sounds that are heard, the doors that open without the touch of mortal hands, the phantom shapes which have been seen gliding through the halls and corridors. But, one and all, these ghosts are ghosts of high degree and of unexceptionable deportment, and never in the least have they encroached upon the peace and comfort of the residents of Wythe House.

There is nothing especially noteworthy in the architecture of this old mansion unless it is the air of solid and substantial comfort which it wears. The plan is a very simple one — a wide central hall through the middle of the house, and two rooms on either side of this, each having four windows and a great fireplace. I did not examine the arrangement of the second story. The kitchens and offices are in a rear building.

WILLIAM AND MARY.

The college buildings stand marshalled on three sides of the old campus at the western end of Duke of Gloucester Street, the main house facing toward the street while the President's house and Brafferton stare at one another across the campus. The two latter are plain square buildings of considerable age. The schools have been three times destroyed by fire. The original buildings were "the composition of Sir Christopher Wren," and presumably very fine. They were burned in 1705, "the Governor and all the gentlemen that were in town coming to the lamentable spectacle, many of them getting out of their beds." Of the second structure we only know that Mr. Jefferson, who, by the way, was a tremendous critic in architectural matters, though perhaps not always successful in the application of his theories to practice, thought it looked very like a brick-kiln. There is now very little of interest about the place from an architectural point-of-view, or to one in search of the picturesque.

The statue in white marble of Narborne Berkeley, Baron of Botetourt, which stands in the centre of the campus, was erected by the Assembly shortly after the death of Lord Botetourt in 1770, in grateful memory of a governor who was everywhere esteemed throughout the colony. He was a liberal patron of the college to which he gave many prizes, and at the time of his death he was earnestly striving to win from the home government repeal of the acts which had given such offense to the colonists. The ravages of time or fortunes of war have despoiled the marble baron of his aristocratic nose, and some night-prowling and irreverent undergraduate has recently affixed a gory streak of red sealing-wax across the august countenance, lending an ensanguined and hostile look to the benign features.

Old William and Mary enjoys the distinction of being, after Harvard, the oldest college in America, and she has counted among her sons very many of the great ones of our land, having "sent out for their work in the world twenty-seven soldiers of the Revolution, two attorney-generals, nearly twenty members of Congress, fifteen senators, seventeen governors, thirty-seven judges, a lieutenant-general and other officers, two commodores, twelve professors, four signers of the Declaration, seven cabinet officers, a chief justice, and three presidents of the republic."

In colonial times it was the only educational establishment of the rank of a college in all Virginia, and directed the intellectual training of a majority of the best men in the colony, although a very aristocratic few of the sons of the wealthier families were sent over to Eton and Oxford.

The history of the college is closely interwoven with that of James Blair, Commissary to the Bishop of London and Rector of Bruton Parish, who was its founder, first president and lifelong defender. The colony sent him to England on a mission to King William in behalf of the projected institution, and he returned in 1693 with the charter of the college signed by their august majesties, William and Mary. It was liberally endowed with rich lands, a sum of £2,000 arrears of quit-rents, one penny per pound on exports of tobacco, the office-fees and emoluments of Surveyor-General and a seat in the Assembly, and was founded as "a seminary of ministers of the Gospel where youths may be piously educated in good letters and manners; a certain place of universal study, or perpetual college of divinity, philosophy, languages, and other good arts and sciences."

The English Attorney-General Seymour, when ordered to draw up the charter, objected to the expenditure of public funds for making divinity-students while England was at war and wanted soldiers, and to the redoubtable Blair, who urged that Virginians had souls to save as well as the English, he thundered out, "Souls! Damn your souls! Make tobacco!"

In the library, among many costly treasures in rare old volumes and prints, are two portraits of Parson Blair done at different periods in the stormy and eventful life of that fiery old polemic.

THE POWDER-HOUSE.

There are to be seen at the post-office, in Williamsburg, some very interesting old files of the *Virginia Gazette*, a journal which was started at Williamsburg in 1736, and was the first and, for many years, the only newspaper published in the colony. Its columns contained, beside a preponderance of local news, the latest advices from England and the Continent not more than a month or two out of date, the fortnightly mail from the North and the monthly post from the South, dignified commentaries on current topics, and advertisements of quaint and curious flavor. Among the locals this one about the old powder-house affair is worth reading:

"This morning, between three and four o'clock, all the powder in the magazine to the amount, as we hear, of twenty barrels, was carried off in His Excellency the Governor's wagon escorted by a detachment of marines from the armed schooner '*Magdalen*,' now lying at Burwell's Ferry, and lodged on board that vessel" — whereupon "the whole city was alarmed and greatly exasperated." In a later issue, account is given of indignation meetings among the citizens, and the full text of a long-winded and eloquent address of remonstrance by the Hon. Peyton Randolph and a deputation, upon hearing which Lord Dunmore flies into a fine rage, and talks of burning the town.

A few days after, we read, the people seize all the arms in the powder-house, and His Lordship sends over to the "*Fowey*," lying at Yorktown, for troops. A squad of soldiers are marched over to Williamsburg, and mount guard on Palace Green before the Governor's house. The "*Fowey's*" captain meanwhile has informed Mr. Thomas Nelson, the principal citizen of Yorktown, that in case the Williamsburgers attack his men the guns of the "*Fowey*" will open upon Yorktown without further warning. The warlike aspect of affairs finally reaches a climax when news is brought that Patrick Henry is marching on the capital, at the head of 5,000 men, to demand redress of these tyrannous abuses. In the last chapter of the story Lord Dunmore pays the value of the powder, and Mr. Henry's forces disband and return to their homes.

The powder-house was built by Alexander Spottswood early in the eighteenth century. This Governor is said to have done more for the general improvement of the colony than any of his predecessors. He was the son of a distinguished Scottish cavalier who had died upon the scaffold for devotion to his King. A brave soldier — he served, it is said, on the staff of Marlborough — and a most accomplished gentleman, Spottswood possessed administrative abilities of a high order. His policy of peace with the Indians was eminently successful, and his project of requiring the chiefs of tribes to send their sons to be trained in the schools of the whites was productive of great good.

[1] Continued from No. 703, page 281.

The most picturesque incident of Governor Spottswood's rule was his leading a party of young explorers from Williamsburg across the Alleghanies and into the unknown regions beyond. It was a royal frolic, and in about six weeks the expedition rode back covered with glory and stocked with romantic stories of the marvels of that *ultima Thule*, the beautiful Valley of Virginia. Spottswood dubbed his young adventurers "Knights of the Horseshoe," and before disbanding the company he gave them each a golden horseshoe to be worn thereafter upon the lapel in memory of the affair. King George hearing of these brave doings intimated his gracious pleasure by sending over to Spottswood a little jewelled horseshoe and a baronetcy.

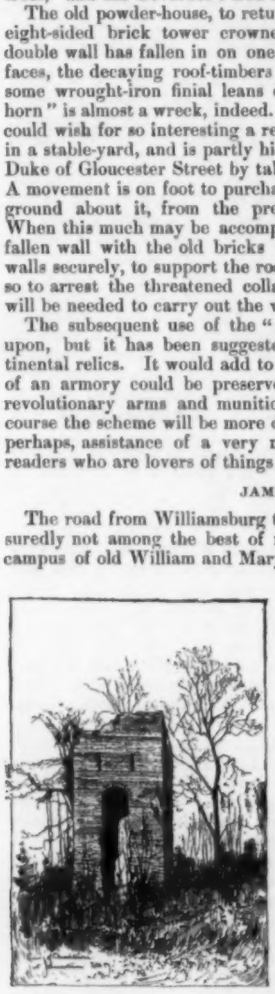
On leaving office the Governor retired to his country-seat at Germanna, whither came Colonel Byrd, of Westover, in due course, to visit his old-time friend, finding "Colonel Spottswood's enchanted castle on one side of the street and a baker's dozen of ruinous tenements on the other side; there was, also, a chapel about a bow's-shot from the Governor's house, at the end of an avenue of cherry-trees," and the Governor's iron foundries, the first in the colony.

The old powder-house, to return from our little digression, is a tall eight-sided brick tower crowned with a high conical roof. The double wall has fallen in on one side and bulges badly on the other faces, the decaying roof-timbers threaten to collapse, and the handsome wrought-iron finial leans dismally askew. The old "powder-horn" is almost a wreck, indeed. The surroundings are not what one could wish for so interesting a relic; in fact, the old magazine stands in a stable-yard, and is partly hid from the view of the passer-by on Duke of Gloucester Street by tall and very unbeautiful board-fences. A movement is on foot to purchase the building, with a small plat of ground about it, from the present rather unappreciative owner. When this much may be accomplished, it is proposed to rebuild the fallen wall with the old bricks which lie where they fell, to tie the walls securely, to support the roof with some auxiliary framing, and so to arrest the threatened collapse of the tower. But a small sum will be needed to carry out the work.

The subsequent use of the "powder-horn" has not been decided upon, but it has been suggested to use it as a museum of Continental relics. It would add to its interest if its ancient character of an armory could be preserved, and a collection of colonial and revolutionary arms and munitions of war stored therein. In due course the scheme will be more definitely stated in this journal, and, perhaps, assistance of a very modest character besought from its readers who are lovers of things quaint and beautiful.

JAMESTOWN.

The road from Williamsburg to the ancient site of Jamestown, assuredly not among the best of roads, passes out of the town by the campus of old William and Mary, and, soon leaving behind the straggling houses, bears off toward the southwest over a rolling country. Plunging into little valleys, scaling steep, short hills, winding through belts of the forest primeval, or diving into dark, damp places where gnarled roots and stumps combine with mud-holes of amazing muddiness to produce an interesting variety of sensations, the old road meanders on toward the river, growing ever worse. Descending at last into a reedy marsh of broad extent, which is crossed upon a bed of roughest corduroy, bearing evidence of complete submergence at high water, and suggestive of being a very uncomfortable place on a dark night and a full tide, and on the further side of the marsh going over a shaky bridge which spans the inside channel of the river, the road arrives upon the historic soil of Jamestown Island.



From this point there formerly stretched to the mainland a narrow neck of land, where readers of colonial history will remember Sir William Berkeley and his motley troop from Accomack making their famous stand against the invading army of the rebel Bacon. But the isthmus is long since sunk out of sight, and now the yellow waters of the James lap all sides of the former peninsula. The island contains nearly seventeen hundred acres, lying in a long, narrow strip of land, two-thirds of whose entire area is marsh subject to overflow. Near the western end of the island is the crumbling, mossy, ivy-grown ruin of a brick church-tower, about all that is left of the ancient place. Standing in a copse of fine old trees, the ruined tower is very picturesque, and has an interest in itself apart from that which clings to it as the oldtime place of worship of that wonderful band of adventurers who founded Jamestown, the first permanent English settlement in America. The tower is eighteen feet square, and is pierced on two of its sides by high, round-arched openings. It is built of a small, dull-red English brick laid in the Flemish bond.

Beyond it the foundations of the old church are traceable, covering an oblong square of twenty-eight (28) by fifty-six (56) feet, and close by is a mossy, crumbling wall built in the latter part of the eighteenth century from the ruined wall of the old enclosure around about one-third of the original churchyard. Within are some ancient tombs, upon which one deciphers, under the moss and rime, quaint epitaphs of old Amblers and Jacquelines, Sudwells and Lees. Of these, the Jacquelines and Amblers for many generations were the principal owners of the island, while the Lees and Sudwells were of Green Spring, some few miles distant, and famous as the home and place of retirement of that staunch old royalist, Sir William Berkeley. When the worshipped head of his august master, Charles, fell on that dismal morning in 1649 at Whitehall, the old cavalier, his governorship given to the hated Roundhead, his idol dead, the faith for which he had lived and would gladly have died, the *jus divinum*, trampled under foot by clods and boors, found in that peaceful rural life, in the company of his wife and friends at his modest house at Green Spring, a balm for all his wounds. Here he waited and watched events, through those long, stern years of the Protectorate, until old Noll was gone and the son of Charles had come unto his own again, when the fierce old knight held the reins once more over the young colony. Berkeley died in England in 1677, leaving Green Spring to his widow, who afterward married Colonel Philip Sudwell.

"Something special in the way of notice is due to the condition of the tombs of Commissary and Mrs. Blair, the latter being the daughter of Philip Sudwell, of Green Spring, who married Sarah Grymes, of Middlesex. The tombs were placed side by side, and were very heavy and strong. The platform, sides and ends were of white freestone, and the interior filled with bricks well cemented. The top slabs, on which the inscriptions were made, are of dark ironstone or black marble. A sycamore shoot sprang up between the graves, and is now a large tree. In its growth it embraced, on one end and on the top, the tomb of Mrs. Blair, one-third of which lies embedded in the body of the tree and is held immovable. All the interior, consisting of brick, and two of the side stones, have been entirely forced out of their places by the tree, and lie scattered around, while the dark ironstone is held in the air three feet above the surface of the earth, fast bound by the embrace of the body of the tree, into which it is sunk between one and two feet, the inscription being only partially legible. On the other side, the whole tomb of Commissary Blair has been forced from its place by the roots and body of the tree, and is broken to pieces in all its parts." This account of the old graveyard is from Bishop Meade's "*Old Churches*," and the date of the ruined tower is discussed at some length by the same eminent authority, who says:

"As there are conflicting opinions concerning the date of the erection of this old church — some affirming that what we see are the ruins of that which was destroyed in Bacon's Rebellion, while others affirm the building of a new one after that event — we will briefly state the facts bearing on the case. The history of the succession of the Jamestown churches is as follows: The first place of worship, as described by Captain Smith, was made of the awning, or old sails, taken from vessels and fastened to trees. The second was a very plain log building, which was burned down in the second or third year of the colony, during the ministry of the Rev. Mr. Hunt."

In his "*History of Virginia*," Captain Smith, himself, writes at some length about the church and its pastor:

"The log church first erected was burned down the following winter with many other houses. Mr. Hunt lost all his books and everything else but the clothes on his back. Yet none ever saw him repine at his loss."

Robert Hunt came over in 1606 with the first company, and was by all accounts a most noble character.

"Upon any alarm he was as ready at defence as any, and till he could not speak he never ceased to his utmost to animate us continually to persist."

The "Advertisements for the Unexperienced Planters of New England or Elsewhere, etc.," a pamphlet published by John Smith in 1631, contains a more detailed account of the churches during his stay in the colony:

"When I went first to Virginia, I well remember, we did hang an awning — which is an old sail — to three or four trees, to shadow us from the sun; our walls were rails of wood, our seats were unhewed trees till we cut planks, our pulpit a bar of wood nailed to two neighboring trees; in foul weather we shifted into an old rotten tent, for we had few better, and this came by way of adventure for new. This was our church till we built a homely thing like a barn, set up on crotchets, covered with rafts, sedge and earth; so was also the walls. The best of our houses were of the like curiosity, but the most part far much worse workmanship, that could neither well

defend wind nor rain; yet we had daily Common Prayer morning and evening, every Sunday two sermons, and every three months the holy communion till our minister died. . . ."

During Smith's survey of the Chesapeake, not the least of his great achievements, the Indians burned the church. He had it rebuilt at once upon his return. "Now the building of the palace was stayed as a thing needless, and the church was repaired."

Of the further history of the churches, Meade says: "The third was a larger and better one, probably of wood, built during the presidency of Captain Smith, and in a ruinous or neglected condition when Lord De La War arrived, in 1611," who immediately ordered that the church be thoroughly repaired. Strachey, Secretary and Recorder of the colony, gives this description of it: "It is in length three-score foot, in breadth twenty-four, and shall have a chancel in it of cedar, a communion-table of black walnut, and all the pews of cedar, with fair, broad windows, to shut and open — as the weather shall occasion — of the same wood, a pulpit of the same, with a font hewn below like a canoe, with two bells at the west end. It is so caste, as it be very light within, and the Lord Governor and Captain-General doth cause it to be kept passing sweet, and trimmed up with divers flowers, with a sexton belonging to it. Every Sunday, when the Lord Governor and Captain-General goeth to church, he is accompanied by all the counsellors, captains, other officers and all the gentlemen, with a guard of Halberdiers in his Lordship's livery of fair red cloakes, to the number of fifty, on each side and behind him. His Lordship hath his seat in the Quoir, in a great velvet chair, with a cloth, with a velvet cushion spread before him, on which he kneeleth, and on each side sit the council, captains and officers, each in their place, and when he returneth home again he is waited on to his house in the same manner."

"This was doubtless the same," says Meade, "in which Governor Yeardley, with the Councillors and Burgesses, held their legislative session in 1619; and, as we read of no other church being built between that time and 1676, when the town and church were burned down by Bacon, it is most probable that this was the building. In opposition to the theory that the present are the ruins of the old church which was burned in the rebellion, is the fact that the dimensions of the church which Smith built and Lord De La War repaired were different from the one whose ruins are now seen. The dimensions of the former were twenty-four by sixty; those of the latter twenty-eight by fifty-six. Other circumstances there are which render it almost certain that another church had been built since the destruction of the one by Bacon. Not only was there a goodly number of families residing in the place for some time after this, but the Court-house and House of Burgesses were there until the removal of the seat of government to Williamsburg after the year 1705. Although the governors may have lived at Green Spring, yet some of the officers of the Government belonging to the port and legislature were there; and it is not to be supposed that they would live for thirty years without a church."

Our reverend author goes on to cite the circumstance of Governor Andros presenting communion-plate to the Jamestown Church in 1694, that a silver font was given to it by the Amblers, which is still in evidence, and that no marks of fire are discoverable about the ruins, and he finally concludes "that the ruins which we now behold are those of a church put up since the rebellion of Bacon in 1676." As one sees the old tower standing, dismantled, but beautiful, among the ancient, stately trees, memory almost unconsciously tries to rehabilitate the times and the men who have made the place famous in the world's history. Foremost of them all stands forth the grand plebeian name of John Smith, the chief actor in the settlement of Virginia. There is hardly in all history a figure more picturesque than that of this indomitable man. His life was a romance, and full of marvel. Dying quietly in London in 1631, he sleeps in St. Sepulchre's, where a stone bearing his arms, his three Turk's heads, and his motto, "*Vincere est vivere*," is to be seen before the communion-table. A tablet to his memory, engraved with a sonorous epitaph, beginning:

> "Here lies one conquered that hath conquered kings,
> Subdued large territories, and done things
> Which, to the world, impossible would seem."

was destroyed in the great fire of London in 1666.

About the only memorial of Captain Smith, and at the same time the only specimen of the architectural achievements of the first settlers to be found in Virginia, is the chimney of the log-house built by Smith for Powhattan at Werowocomoco. The stone of which the chimney is built appears to be a shell rock. There is a great fireplace, eight feet wide, four feet deep and six feet high. Before many years the rapid encroachments of the river will have undermined the ruined tower, and the last relic of Jamestown will sleep beneath Powhattan's turbid flood.

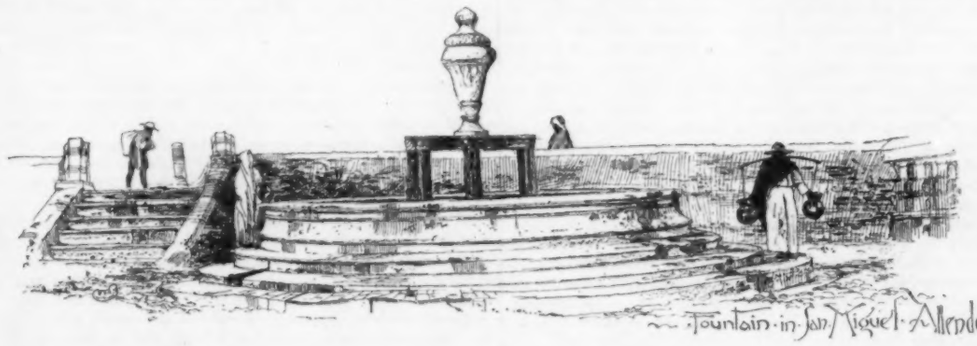
AUTUMN JOURNEYS IN MEXICO. — VI.

QUERÉTARO.

EVERY one who has heard of Mexico has some idea of Maximilian and that he was in some way connected with the political history of the country. And all who have heard of Maximilian know that he met his sad fate in Querétaro. Consequently every tourist in Mexico is strongly inclined to make a pilgrimage to Querétaro in the interests of an historical knowledge which, in most cases, is limited to the Spanish Conquest and the death of Maximilian. But for this, few tourists would ever see that city, though once attracted to it by affection for the amiable Austrian whose melancholy end endeared him to the world, a great deal of interest is to be found there.

It is a beautiful city, in a lovely situation. As one surveys, from the Convent de la Cruz, (where Maximilian had his headquarters), or from the Cerro de las Campanas (the Hill of the Bells), where he laid down his sword with the sad words, "I am no longer an Emperor," and where he was afterwards executed, the city with the picturesque towers of its fifty-six churches, the broad level fields which surround it, all under cultivation, and the beautiful hills which close it in on every side, one may suspect that the Austrian Archduke, who was already tired of the Imperial task he had undertaken, disgusted with the treachery of his pretended friends, and sorrowing over the loss of his beloved Carlotta, found other attractions in Querétaro than its ecclesiastical strength, and the promises of the Imperialists who thronged the town. For Maximilian was eminently æsthetic. He was a far better judge of scenery than of human character or of political probabilities.



He used a happy expression, however, when he called the place "the mouse trap." After he had established himself in the town, the Republican armies began to gather from every quarter. In a short time they had a line of artillery upon the hills encircling the valley. Then followed the siege with all the horrors which always pertain to a seige: the treachery of Lopez, the surrender, the farcical trial, the heroic death. These are the subjects upon which one reflects as one stands upon the Cerro and looks out over Querétaro.

Surely Maximilian left his impress upon the city. It is impossible to dissociate his memory from the place. The Church of the Cross (de la Cruz) still stands, so does the old monastery in which the Emperor was held a prisoner. And the town is full of staunch Imperialists still, who warmly cherish the memory of their fallen chief. Some years ago they petitioned the government for permission to erect a memorial of their unfortunate Emperor. The government would permit only a mark to be placed upon the *site of the*

[1] Continued from No. 703, page 282.

execution. The memorial erected in accordance with this reluctant concession is a model of good taste. Three blocks of feldspar, of a pinkish hue, such as is found in quarries in the neighborhood and is extensively used for building purposes in Querétaro, mark the spot where Maximilian and his two brave companions in arms and in death, fell. They are simply inscribed, Maximiliano, Miramon, and Mejia, respectively, and each bears the fatal date, "*Junio* 19 *de* 1867." They are enclosed by a high iron railing upon a stone base, supported by corner posts of the same colored stone. Each post is surmounted by a plain Roman cross.

There is at least one object of especial architectural interest to be found in Querétaro. It is the stone aqueduct which supplies the city with water from springs five miles distant. The aqueduct leads up to the mountains two miles away, and a tunnel completes the distance. Some of the arches in this aqueduct are ninety feet high. Good masonry was executed in those old days in Mexico, and the mortar between the huge stones which compose this aqueduct shows no signs of crumbling, though the work was done over a hundred and fifty years ago. The cost of the work is set down as $124,000, and the greater part of the money was furnished by Baltasar de Zuniga, Marques de Velero de Aguila, who was Viceroy

of Mexico in the years 1716 to 1722. It was not every Spanish Viceroy who looked out for the requirements of his subjects as well as Zuniga, and the gratitude of the city has been expressed by erecting a monument to his memory in the plaza. Thus Querétaro perpetuates the memory of two men distinguished in the history of Mexico. One was the unfortunate Austrian who undertook to "regenerate Mexico." The other was the thirty-sixth viceroy. It might be suspected that it is not a very loyal republican city: it is one of the Church's strongholds, and the Church and the Republic "agreed to disagree" some time since.

Querétaro is reached from the capital by means of the Mexican Central Railway, which places many and great opportunities at the disposal of the tourist, for making autumn journeys in Mexico. A former correspondent has embraced these opportunities and given the readers of *The American Architect* the benefit of his busily employed pen and pencil in Guanajuato, Lagos, Chihuahua, and elsewhere. This railway brings to the tourists' especial notice one of the most stupendous works of engineering to be found anywhere. It is the famous Tajo de Nochistongo, or drainage-cut, designed to drain one of the lakes of the Mexican Valley which imperiled the City of Mexico.[1] It was first constructed as a tunnel four miles in length. Failing to accomplish its work in that form it was subsequently opened as a deep cut. When the Mexican Central Railway sought an entrance through the mountain wall surrounding the Mexican Valley, the Tajo de Nochistongo, having served its original purpose, furnished the desired means of ingress. The railway runs along a shelf excavated upon the side of the cut, and affords an excellent opportunity to examine this interesting relic of the engineering skill of the seventeenth and eighteenth centuries, without leaving the train.

In a short time lateral branches of this railway will be opened, connecting the Gulf with the Pacific, Tampico with the San Blas, and opening up other interesting portions of Mexico for the inspection of tourists, and provide opportunities for other autumn journeys in Mexico, without necessitating roughing it to the extent of employing the primitive modes of travel, the *litera*, the pack mule, and the *diligencia*.

THE ILLUSTRATIONS

[Contributors are requested to send with their drawings full and adequate descriptions of the buildings, including a statement of cost.]

HOUSE OF G. G. HAVEN, ESQ., LENOX, MASS. MR. J. D. JOHNSTON, ARCHITECT, NEWPORT, R. I.

[Gelatine Print, issued only with the Imperial Edition.]

HOUSE FOR I. W. ALLEN, ESQ., YORK, PA. MR. B. F. WILLIS, ARCHITECT, YORK, PA.

THE materials of this house are: native dark-blue limestone in large blocks with red-brown pointing for first story. Second story, shingles, light-red stained. Roofs, dark-blue slate. Windows filled with 26-oz. Chance sheet crystal glass. Interior, sand-finished walls for oil painting, hard-wood floors, selected ordinary sawed oak and rift or comb-grained selected North Carolina pine.

PERSEVERANCE LODGE NO. 46, KNIGHTS OF PYTHIAS, CHESTNUT HILL, PHILADELPHIA, PA. MR. GEORGE T. PEARSON, ARCHITECT, PHILADELPHIA, PA.

THE building is pointed stone, contains two stores, two dwellings, a large lodge-room and open-timbered roof with ante-rooms in the third story. It has been contracted for at $12,500.

A FAMILY HOTEL, MINNEAPOLIS, MINN. MR. H. M. JONES, ARCHITECT, MINNEAPOLIS, MINN.

THIS building is built of brick and brownstone.

MEMORIAL LIBRARY, ACTON, MASS. MESSRS. HARTWELL & RICHARDSON, ARCHITECTS, BOSTON, MASS.

HOUSE AND STABLE, HAVERFORD COLLEGE STATION, PA. MR. W. EYRE, JR., ARCHITECT, PHILADELPHIA, PA.

PARIS EXHIBITION.

IN my last article or prologue to the studies which we are going to make on the Exhibition of 1889, I passed in rapid review the Universal Exhibitions which have preceded it. To-day, that of 1889, has been opened for more than a month, and the echo of its colossal success has certainly reached you. The magnificent fête which marked the inauguration on the 6th of May, at which 200,000 persons were present, has been described in all the newspapers, and I need not dwell on this point. I only wish to lay stress on the enormous number of paying visitors during the month of May, namely, 2,208,045. In 1878 there were only 1,269,675. This difference was all the more remarkable, for in 1878 the Exhibition was opened the 1st of May, and this one was opened only on the 6th.

We are going to enter the Exhibition through the Trocadéro, and the glance that we shall cast over the Champ de Mars will give the most exact idea of the general arrangements of the buildings. But, first, let me speak a moment of the classification adopted, which differs slightly from that of 1878. The creation of special classes for hygiene, viticulture and pisciculture are good minor changes. In the language adopted for exhibitions, the manifestations which respond to a general idea is styled a "group," and a "class" is each special order of the manifestation. Group 1 is consecrated to the fine arts, and is divided into three classes. Group 2, to education and educational supplies, and to the liberal arts. It is divided into twelve classes which have a connection, of course, with the fashioning and enlarging of the human intelligence. Group 3, furniture and accessories, contains twelve classes. Group 4, tissues and clothes, contains eleven classes. We have next group 5, the extractive industries, raw and manufactured products. Group 6, tools and processes of mechanical industry, and electricity. Group 7, alimentary products. Group 8, agriculture, viticulture, pisciculture, and group 9, horticulture.

Now let us begin our visit and enter the Trocadéro. The gardens of the Trocadéro are occupied by the exhibitions of horticulture and arboriculture, and contain no other structures save a restaurant, the pavilion of Public Works, the very original one of Waters and Forests, and several little kiosks and greenhouses. From beyond the Pont de Jéna the Eiffel tower raises its giant height, and lets us see between its arches the palaces and gardens on the Champ de Mars. At the back, like the horizon line, lies the machinery-gallery, cut in two parts by the elegant silhouette of the central dome of the palace of the industrial sections. On the right and left, corresponding with the galleries of the foreign sections are the two palaces of the liberal and fine arts, whose domes glitter in the sun.

[1] See No. 604, of *The American Architect*.

At the foot of the great tower, on the terraces, in the gardens, on the bank, everywhere in fact, is a very ant heap of picturesque constructions, projections, pavilions, towers, pointed roofs and domes, which declare themselves against the clear sky or stand out on the greensward. In the first plane, perhaps in a little too regular form, we note the marshalling of the "history of the dwelling-place." On the left, along the quays are the galleries of agriculture stretching out to join the esplanade of the Invalides, the colonial exhibitions and those of history and hygiene. Passing under the tower without stopping, since it is not yet finished, and the elevators only operate as far as the first story, let us direct our steps towards the central dome, admiring as we go the beautiful monumental fountain which occupies the middle of the garden. This fountain, the work of M. Coutan, represents the vessel of progress bearing the City of Paris who stands erect surrounded by Fame, with her trumpet, and allegorical figures personifying modern life. The fountain consists in all of twenty-four figures, fifteen of which are colossal, and from 3.60 to 4 metres in height. The silhouette is agreeable, full of movement and very decorative.

We arrive thus before the central dome, which serves as triumphal entrance to the industrial sections. This entrance is declared by a great bay cut at half its height by a projecting balcony. The coving is decorated with cartouches and medallions in brilliant colors. On each side is a pylon crowned by an enormous head in the round. A frieze of the escutcheons of cities occupies the length of the pediment, which is crowned by the ship of the City of Paris. The dome is decorated with *cabochons*, with cartouches, winged sphinxes, and lions' heads and garlands. A monumental statue crowns it, which represents France distributing crowns to the nations. This is the work of M. Delaplanche. Two groups, one by M. Gautherin, "Commerce," and the other by M. Gauthier, "Industry," placed at the foot of the pylons, complete this luxurious composition, which we can only criticise when we examine very near at hand a decoration which is somewhat exaggerated and heavy in its details. This dome has been built by M. Bouvard, architect of the galleries of the industrial section. Now the interior is altogether magnificent. Its diameter is 30 metres and its height 50 metres. An enormous frieze of figures by M. Lavastre, the decorator of the Opéra, decorates the entire circumference above the balcony of the first story, and represents all the nations coming to pay their respects to France at the Exhibition of 1889. The yellow tone of the interior decoration of the dome has a very brilliant and warm effect. It is magnificent. Before us stretches the Gallery of Honor 30 metres wide and 175 metres long, which leads to the machinery-gallery. Before entering, let us cast a glance at the exhibition of national manufactures, which occupies the lower floor and first story of the central rotunda. The ground-floor is occupied by the exhibition of Sèvres, arranged on two platforms or in niches of green, where are arranged decorative vases. One of the important pieces is the Paon, 3.54 metres in height by 1.90 in breadth, and all white. At the right and left two halls, 11 metres by 20, contain the tapestries of Beauvais. On the first floor, which we reach by four staircases, is found a circular balcony 6 metres wide, hanging over the vestibule of the dome, on which is to be established the retrospective exhibition of ceramics. The balcony forms a loggia to the grand gallery of 30 metres, and opens also on the garden. Two halls of similar dimension as those on the ground-floor contain the exhibition of Gobelins. Amonst the most beautiful of pieces I will mention the decoration of M. Galland for the Hall of Apollo, in the Palace of the Elysée. It consists of seventeen hangings, which bear a succession of allegorical figures, the Muses, the Poems and Pegasus as a central panel. Next, the panels of M. Lavastre, Science; M. Lefevre, Nymphs and Bacchus; M. Chardin, Sylvan Music and Warlike Music; of M. Urbain Bourgeois, Innocence; and, finally, the work of Messieurs Desgoffes, Paul Flandrin, Lansyer, Bellel, Maloisel and Curzon. The compositions of M. Ehrmann for the National Library must also be remarked: for the first story, two figures representing "Print" and "Manuscript," and for the lower floor the grand panels of "Literature," "Science" and "Arts." Opposite to these and of the same dimensions, that is, 8 metres by 5, is the magnificent tapestry "the Goddaughter of the Fairies," a composition by M. Mazerolles, the artist decorator, who has just died. To complete the exhibition of national manufactures, there must be mentioned the very beautiful pieces called "Savonnerie," which derive their name from the State manufactory where this kind of product was made for the first time. It was at the beginning of the seventeenth century that a Frenchman, named Pierre Dupont, suggested to Henry IV the idea of installing at Paris a carpet factory after the Oriental style. The establishment was created and occupied during a century, on the Quai de Billy, a building which had formerly been used as a soap factory. Hence the name "Savonnerie." In 1728, this manufacture was united with that of the Gobelins. The workshops of the Savonnerie are represented at the Exhibition by five allegorical panels, which are destined to decorate the Palace of the Elysée, and symbolizing, after the composition of M. Lameire, Science, Art, Industry, War and Maritime Affairs.

Entering the 30-metre gallery, the first thing which strikes our eyes is an isolated mosaic door. It was made at the National manufactory of Mosaics, at the Gobelins, after the composition of M. Paul Sédille. On each side two female figures drawn by M. Luc-Olivier Merson, symbolize "Tapestry" and "Ceramics." This door, whose colors are a little vivid, seems small in the midst of this grand gallery, and the general effect of it is not very elegant, but it forms in the centre of the gallery a point of departure for the most interesting and rich specimens of different industries represented in different classes. Among the most curious exhibits, I will mention the window of ceramics and glass, the work of M. Emile Gallé, of Nancy; a church altar in goldsmith's work, by M. Poussielgue; a little panel in porcelain and Limoges faience, by M. Charles Haviland; and finally the very important exhibition of Messieurs Thiébaut Bros., which consists of art-bronzes: among its most beautiful pieces may be remarked the model of the equestrian statue of Etienne Marcel, by Idrac & Marqueste, the original of which is at the Hôtel-de-Ville. We likewise see a sufficiently elegant fountain of mosaic work, a fine old piano, by Erard, a window of Lyons silk, and marbles from off the house of Cantini, of Marseilles.

The exhibit of copper-work made by Laveissière occupies a very important place, and is arranged in an original and decorative manner as a kind of enormous trophy composed of copper apparatus used in distilling and refining. Here may be noted retorts three metres in diameter and tubes ten metres long without seam.

Returning towards the rotunda, let us cast a look on the monumental doors erected by the exhibitors at the entrance of their sections. These doors are almost all magnificent, and the architects of the different classes have entered into rivalry in the matter of style and richness of their compositions. To the right, on leaving the rotunda, we find that of the jewellers, composed of two classical arcades, and with a rather cold general effect. On the other hand, the door to the ceramic section is quite another affair. Constructed by M. Marcel Desliguières, it is wholly of terra-cotta, faience and ceramic work. It is composed of a grand central arch resting on a strong sub-basement decorated with foliage, after the Indian style; above two niches, one on each side, with female statues symbolizing "Ceramics," by M. Lormier, sculptor, and "Mosaics," by M. Houssin, sculptor. These two statues, all of enamelled faience, form two superb bits of ceramic-work. The tympanum of the arch is decorated with pretty mosaic work on a gold background representing "Earth" and "Fire," symbolized by two female figures. The frieze is decorated with rosettes of faience in a succession of small arches, and the whole is crowned by a cresting which stops against a motif of figures, with a decorative vase. On each side of the entrance door is a portico of two arches separated by a central column and surmounted by a frieze with figures in faience forming panels. Two statuettes resting on culs-de lampes, crown the summit of two pilasters, which limit this motif of arcades, and which themselves are surmounted by a decorative panel with a vase above. A balustrade of enamelled lava completes this extremely brilliant whole in a rendering of Italian Renaissance. M. Marcel Desliguières, architect, had as co-laborers in the execution of this doorway our most able ceramicists, Brauet, Boulanger, Gillet, Mortreux, Lœbnitz, Muller, etc. After the brilliancy of this doorway, that of the furniture and tapestry section seems severe. This last is, nevertheless, enlivened by two decorative panels by M. Toché, which are very luminous in effect.

After the two doors of the horological section, original enough, but not sufficiently studied, by M. Abel Chancel, and that of the bronze section, which is sufficiently commonplace, we find ourselves in front of the doorway leading to the metallurgical section, designed by M. Schmidt. This is one of the best, if not the most successful, in my opinion. It is entirely made with motifs derived from metallurgy and pieces of iron or steel, which are exhibited by the iron-works of Pompey, and in spite of the dryness of each of these elements, taken by itself it forms a whole which is extremely original and even amusing. The consoles in iron spiral springs, the *cartouches* formed of tampions of locomotives of polished steel, the columns, all the decoration, in a word, is obtained without drawing on any matter foreign to that which constitutes the exhibit of metallurgy. Another door composed in the same feeling but less successful, is *vis-à-vis* to it and still belongs to the metallurgical class. It is the work of M. Guerinot.

Passing more rapidly before the door of forest industries, whose originality is too labored and becomes *baroque*, and also before that of portable arms, which is too meagre in its decoration, we will stop with pleasure before the door of the woollen-goods department, designed by M. Courtois. Suffice it to say the whole, Renaissance in style, is very decorative and very brilliant in color. It consists of three bays, fashioned by marble columns of a very beautiful violet tone, heightened by gilding on the capitals, and a brilliantly effective central motive composed by M. Toché, whom we always find on hand where there is need of ability and fine coloring. The panels, painted by M. Rochegrosse, and representing weaving and dyeing, having a somewhat Japanese effect, complete this door, which is one of the successes of the gallery.

By the side of this, rustling with gold and decorations, is the doorway of the silk department, very academical in design and somewhat severe as a whole, but it has a beautiful ordonnance and does not lack for character.

The last two before reaching the rotunda are less interesting, although there is ability in that of the one ably composed by M. E. Bertrand, who, unfortunately, was afraid of giving too much projection and relief and has fallen into the other extreme.

We have seen the vestibule and gallery of honor, and in another article we will pass through the French industrial section, stopping by preference before the products which are associated with architecture and decoration.

M. BRINCOURT.

THE LOTUS IN ANCIENT ART.[1]—VI.

THE ANTHEMION AND THE LOTUS.

1

In specifying the Anthemion as a lotus motive, it is important to insist on a historic aspect of artistic and decorative development, which is not apparent in a time of eclectic copying like our own. In a time which has imitated and mixed together the decorations of every national style and of every epoch of history it is not easy to grasp the fact that in the original development of decorative art it has followed a specific course of evolution, in which ornaments of a certain character were confined originally to certain centres, from which they have radiated or travelled in certain directions according to historical causes.

Since the beginning of Greek history, at least, there is one law of decorative evolution for which there is abundant evidence; viz., that each successive style has followed a definite sequence of development from the simpler to the more ornate phases of a given motive. In the architectural decoration of the Renaissance, Gothic and Romanesque styles, every step in the elaboration of the ornamental style argues a sequence in time, and follows a definite development from the simple to the ornamental, from the ornamental to the elaborate, and from the elaborate to the complex, over-burdened and superfluous, after which the style becomes lifeless and fossilized, and finally disappears. The various distinctions in the nomenclature of the English Gothic are simply distinctions expressing this general law. In the ornamental style of the Renaissance between 1500 and 1550, it is sometimes possible for an expert to date the monuments according to the sequence of style in ornament within a given decade. In the Greek vases of the fifth and fourth centuries B. C. similar differences of style enable the expert to fix the dates occasionally within a quarter of a century.

In the case of the Greek anthemion there is a parallel development, and at a certain stage the influence of plant forms distinct from the lotus is clearly apparent. This influence, especially leaf decorations, is, however, later than the close of the fifth century B. C., and the later anthemions are always built upon an elementary scheme which remains the same, and which preserved its simpler aspect through that time, at least.

This elementary scheme is that of two scrolls or spirals supporting a palmette. In architecture, the anthemion form of the Parthenon may be cited as an example (No. 37). Nos. 38 and 39 are from Athenian tombstones of a later date, and may be quoted as examples of the more ornate subsequent development, which, however, adheres as regards the skeleton of the plan to the original scheme of 37.

In defining the anthemion as a lotus motive, it is this elementary scheme which is in question.

Considering the great abundance of examples of Greek decoration in pottery antedating the fifth century, and the relative scarcity of other material, it is clear why pottery examples will furnish the greatest number of transitions and connecting links in the illustration which is required. To reach the second stage of the later anthemion we turn to the pottery of Rhodes. The first stage is illustrated by the pottery of Cyprus. The third stage and complete illustration of the anthemion, as directly connected with the lotus, is at present writing, and within my knowledge, only furnished by the pottery of Melos.

According to the geographical sequence from East to West, and in view of the greater independence of the Rhodian Greeks from Oriental influence, as compared with the absolutely dominant Orientalism of Cyprus, we have a right to expect in the pottery of Rhodes and from its earliest examples a more Grecianized expression of the lotus form. On the other hand, the close relations of Rhodes with the Greeks of the Nile Delta from the time of their establishment in Egypt in the eighth century B. C. would explain that dominance of the lotus in its pottery decoration which the most casual examination will reveal, and which is also the rule for the Greek pottery of Naukratis.

Among the various forms, we select that which is clearly a more Grecianized expression of the Cypriote lotus motive, through which we have found one way to an explanation of the Ionic capital. No. 1 shows, for convenience of reference, a repetition of this now familiar form of ornament. With No. 2 we enter on the first stage of the Greek lotus anthemion. Without any sort of doubt, this ornament is a Grecianized development of the Cypriote voluted lotus. The curling calyx leaves[2] have grown into spirals; the upper portion is a Greek decorative treatment of the simplified lotus form, the whole filled-in with conventional decoration. We have pointed out that the Greco-Phœnician pottery of Cyprus can clearly date its typical examples back to the fifteenth century B. C., at least. There is no Rhodian pottery of the class in question which could be placed earlier than the eighth century with any certainty. Thus the sequence both in time and in geographical relation is a clear one. No. 3 is a variant showing that we are dealing with a Rhodian type, and not an isolated example, and No. 4 is a related motive from a vase found on the island of Thera.

[1] Continued from page 226, No. 698.

[2] Compare the calyx leaves from nature, Cut 6, Article I, "The Ionic Capital and the Lotus."

The palmate portion of No. 4, is part of a lotus-rosette (ovary stigma) and related to the Egyptian lotus palmette as this has been already explained in previous articles.

We are now prepared to take advantage of the Chigri capital No. 5, of the Egypto-Phœnician ivory details of Nineveh No. 6; above all, of the Egyptian palmettes, to which they are related, and whose derivation from the combination of the lotus-rosette (ovary stigma) with the voluted lotus has been previously explained.

2

3 4

The typical Egyptian forms are repeated here (Nos. 7–14) from preceding articles in order that the vase lotus, Figure 4, may be clearly recognized as a Grecianized and more elaborately decorative treatment of the combination 10 to 14, inclusive, and of the motives 5 and 6.

A parallel is offered by the Rhodian lotus form at 15 as far as the rosette combination is concerned.

Figure 16 offers a typical example of a Rhodian vase of the style from which the details 2, 3, 4 and 15 are taken. These vases belong to a period comprehending the eighth and seventh centuries—probably the sixth as well. The style of decoration in bands of animals—deer, geese, etc., is well recognized as one preceding that in which figured compositions from the Greek myths are represented, although it continued after this later one began. The most archaic vases of this later class were apparently made first in centres nearer the mother country.

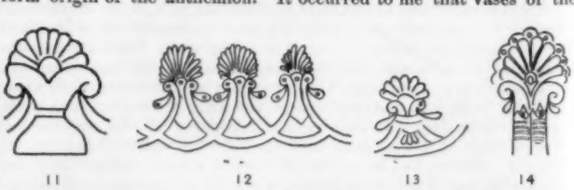
5

It is from the Island of Melos, or from a pottery centre of manufacture which has so far revealed itself by examples found on that

6 7 8 9

Island, that the most archaic class of vases figured with Greek myths derives its examples. Few of these vases are known, but their importance for the history of Greek pottery has been recognized in a special publication devoted to them by Professor Conze, of the Berlin Museum. They are supposed by him to date from the seventh century. The dates of particular pieces, as between the vases of Rhodes and Melos, do not, however, offer cause for anxiety, as it is a matter of general information that in the development of Greek art, local schools were variously formed, and that they frequently perpetuated local types beyond the time of a more perfected art in other quarters. Moreover, the ornaments of the Melian vases are clearly enough lotuses when attention is turned to them, although this has not been noticed in the publication of Professor Conze, or otherwise. In my own observation it was the Melian lotuses which first suggested the lotiform origin of the anthemion. It occurred to me that vases of the

10



11 12 13 14

Rhodian style ought, on account of geographical position, to exhibit connecting links with the lotus forms of Cyprus, and these were then found by turning to Salzmann's publication of Rhodian vases in his "*Nécropole de Camire.*"

In the decorative details from this and other vases of the same class, we meet a development of the lotus form which passes directly over to the Greek anthemion. The transitions are found in details of one and the same vase. There is no difficulty in recognizing in the ornament 17 a doubled lotus—whose spirals are elaborations of volutes similar to those of 4, 3 and 2—which again have been recognized as more Grecianized forms of 1.

In the ornament 18 the relation to 17 is clear. As contrasted with 17 the pointed petals are replaced by the palmette, as in 4 and

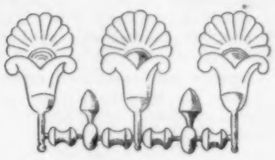
15. The general resemblance as regards proportions, and without reference to the spirals, to the Egyptian lotus palmette in gold repeated at 19 is apparent. It is also to be remembered that the Egyptian motives figured at 11, 14 and at 19, are quite frequently found in the ornamented metal-work discovered in Greek, Phœnician and Etruscan tombs, so that a direct influence of such designs on the vase decorators may be easily admitted. The intimate relations of the Greeks, in general, with those of

15

17

16

18



19

Naukratis would, however, be a sufficient explanation for this and all other Egyptian influences.

As regards the general proportions of the lotus and palmette, and without reference to the volutes, a resemblance may also be traced

20

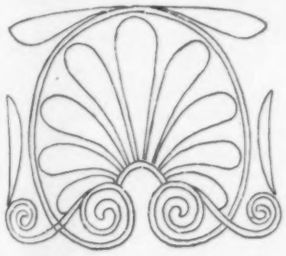
21

22

23

between a Sicilian-Greek architectural lotus palmette figured by Hittorf (20), and the lotus palmettes 18 and 19.

Our next step with the lotus forms of Melos is decisive, especially in view of the fact that 21 and 18 are figured on the same vase. Two points are to be noticed, the free development of the palmette from the stiffer, more formal, aspect seen at 19, and the inversion of the lower scrolls. The Greek decorative feeling, pure and simple, has captured the lotus palmette, and it appears at 22, another



24

25

26

motive from the same vase, in a typical Greek form. This motive exactly resembles the upper portion of 21. It may be compared to the more schematic Rhodian lotus anthemion 4, for indication of the sequent steps by which Greek ornamental art developed from its Egyptian prototypes.

The motive 22 is an excellent type of the Greek anthemion, because in it the two component parts of palmette and spiral are equally balanced. The scheme of Greek ornamental decoration, as regards its scrolls and spirals, is contained in this one example, or develops from it by simple decorative changes,

27

28

of which the most important appear on the same type of vases.

No. 23 develops from 22 by a simple inversion of one scroll.

By carrying the lower unfinished curves of 22 around and upward till they meet above, we obtain another typical form of the anthemion (24). In this case the balance of dimension between spirals and palmette seen in 23 has given way to an enlargement of the palmette and diminution of the spirals. The same variant appears in union with intermediate palmettes in the detail 25 from a Rhodian vase. Both belong to the perfected art of the fifth century. The contrary alternative of palmette diminution and scroll enlargement is represented by 26, also of the perfected Greek art of the fifth century from a Rhodian vase.

If we add to these illustrations, the detail shown at 27 from a Greek vase found in Italy, we shall have fairly covered the typical cases of the anthemion, all reducible to elements which appear in 22 and 23.

We are now prepared to understand that peculiarity of the anthemion borders of the perfected Greek art which alternates recognizable lotuses with the anthemion proper, as shown in the detail of metal decoration (Greco-Etruscan art) at 28, and

29

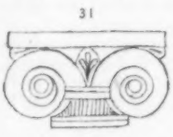
in so many of the borders published by Owen Jones of which a series is shown at 29, Owen Jones's details.

On the hypotheses so far accepted that the recognizable lotus motives of perfected Greek art are Egyptian but that the anthemion is Assyrian, we are required to find some meeting point where the two foreign forms united before they passed to the Greeks. This meeting-point could only be in Phœnician decoration and here all the indications point to a transmission of an Egyptian lotus palmette to Assyria as starting-point of the Assyrian forms. A reaction of the Assyrian palmette on Greek decoration may easily be conceded and very probably took place through later Babylonian or Persian transmission by way of Asia Minor, but at a time when the typical anthemion was already perfected. The main indication that the Assyrian palmette did not influence the early development of the anthemion is the fact that it does not appear on any of the archaic Rhodian and Melian vases which illustrate this development and that the archaic anthemions do not indicate this influence. If the Assyrian form had any influence on the Greek it must have travelled to the Greeks by local stages, and yet the intermediate pottery of Cyprus, and the archaic pottery of Rhodes, are absolutely destitute of any such palmette forms. On the theory of local transmission the influence should be first apparent exactly in these localities. A rare case of Cypriote lotus palmette is shown at 30, the only instance, so far published in the distinctively Cypriote pottery. The upper portion of this design may be conceived as the preparatory or earlier archaic form of 4, but it has no close relations to the Assyrian palmette.

30

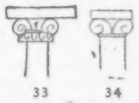
We are forced to conclude therefore that Assyrian and Greek ornamental art are divergent branches of a common tree which was rooted in Egypt and Phœnicia.

As the starting-point of these observations was the Ionic capital we may return to this starting-point to observe once more that only



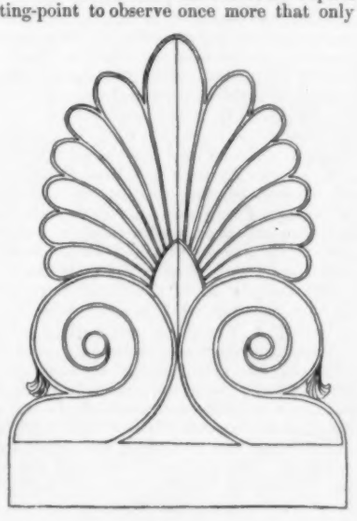
31

32



33 34

35 36



37

by the views presented can we unify that form of Proto-Ionic in which the central triangle appears between the volutes with the alternate form shown by the capital of Chigri (Neandreia) Figure 5. With this we may now unite the capitals recently published by Mr

Trowbridge in the *American Journal of Archæology* (31, 32, recently discovered archaic Athenian Capitals, 33 related capital from a Greek vase); The Syrian Proto-Ionic capital of Mashnaka (34) is repeated from the second paper on the Ionic capital for purpose of comparison with these. All are illustrations of the stages by

38

39

which the ultimate Greek form was reached. It is not necessary to assume or demonstrate a graded precedence of time as regards these individual instances. Let them be local or traditional survivals of earlier forms and the argument remains the same. Such survivals may be demonstrated for the anthemion even in the Greco-Roman art as appears by illustrations 35, 36, motives from terra-cotta reliefs in the Campana collection of the Louvre. Wm. H. Goodyear.

[The end.]

Books and Papers

Mr. Gilman has rendered an important service to social science in collecting in a convenient little volume[1] authentic accounts of all the experiments, successful or unsuccessful, which have been made in sharing business profits between employers and employés, up to the present time, in regard to which information was available. It is easy enough for persons interested in the subject to find elsewhere glowing accounts of the success of this or that particular scheme; but an unprejudiced review of the whole subject, presenting the bad, as well as the good side, is the only thing that is of real use to people who are disposed to take an active part in social reforms, and this is just what Mr. Gilman has given us. He has, himself, naturally enough, a high opinion of the value of participation in profits as a remedy for the antagonism between master and man which has brought so many misfortunes to the community, but he does not allow his prepossessions to color his presentation of the facts, and he deserves our gratitude for his scrupulous fairness.

It is curious that a large proportion of the successful profit-sharing enterprises date from 1847–48, the era of the fever for liberty which attacked the people of so many European countries, and ended in a dozen unsuccessful revolutions. The most famous of all, the Maison Leclaire, entered upon the practice of its system in 1842; but Leclaire lived in Paris, the hot-bed of socialistic ideas, and was an enthusiastic student of social and economic questions, so that it is natural enough that he should have begun to put in practice the ideas that he had gathered a few years before the propaganda which had affected him began to make its way into the outside world.

It is curious to learn that a theorist was, against his will, the author of the solution of the problem which perplexed Leclaire. From an ambitious and industrious apprentice he had become a successful master house-painter and decorator, and, being warmly attached to his workmen, he was anxious to devise some way of securing their future, without subjecting them to the degradation of accepting charity. Like a practical philanthropist, however, while searching for the ideal system, he practised an imperfect one, which consisted in encouraging his men to form permanent connections, in lending them money without interest, in promoting the establishment of a mutual-aid society, supported by subscriptions, and in maintaining a strict discipline in a trade which had the reputation of comprising the worst and most reckless of all Parisian workmen. About 1835, Frégier, then chief of a Government bureau, and fresh from the agitations which ended in the coronation of Louis Philippe, conceived the idea of writing a book on the "*Dangerous Classes*," who had made themselves so unpleasantly conspicuous a few years before, and went to Leclaire as a man who could probably furnish him with information on the subject. He found in him a social theorist like himself, and the two had many discussions on the questions which interested them both. In the course of these Frégier propounded the doctrine that there was nothing, so far as he could see, which would do away with the antagonism between employer and employed, of which Leclaire complained, except the participation of the workman in the master's profits. Leclaire, as he says, "emphatically rejected" this idea, which was quite inconsistent with the economic theories contained in his books, and, moreover, seemed to him entirely impracticable. Nevertheless, the novelty of the notion attracted him, and, as he says, it took root in his mind. Five years later, after Frégier's book was finished and printed, Leclaire was overwhelmed with orders, and, in thinking how he could contrive to fulfil them all, he "perceived all at once a way" in which he could apply Frégier's profit-sharing idea, and at the same time serve his own interests and those of his best workmen. Frégier himself, on hearing of the scheme, discouraged it, urging all sorts of objections, but Leclaire was determined to try it, and in June, 1840, he assembled his best workmen, to the number of eighty or ninety, and explained to them his plan, by which he proposed to divide the profits of his business with them. As those acquainted with workmen can understand, the proposition was received very coldly, and it was not until two years later, after a long series of formal and informal discussions with the men, that the plan was actually put in operation. In February, 1842, a circular of rules and terms was issued, by which, in February, 1843, a division was to be made among the members of the *noyau*, or nucleus, consisting of forty-four of the men who had been longest in his employ, of a certain part of the profits of the year's operations. The men submitted, rather than acceded. Many of them thought that some trick was being played on them, and one of the workingmen's newspapers openly denounced Leclaire as having contrived a scheme to lower wages; but the majority of the members of the *noyau* thought that he probably meant well, and consented to trust his good faith until the end of the year, but without counting much on their dividend.

The twelve months went by, not very prosperously, but sufficiently so to provide something for the workmen, and Leclaire, who had the lively genius of a true Frenchman prepared a little sensation for the men. On the 12th of February, 1843, he called together the men composing the *noyau*, and, standing before them, threw down upon a table a bag containing nearly twenty-five hundred dollars in coin. Then, opening the bag, he distributed the money among the men. Probably few of them had ever had fifty-six dollars at once in their hands before, and, as might be imagined, from that time the success of the scheme was assured.

Leclaire was of altogether too active a temper to be satisfied with the system he had established. After a year or two, finding that the encouragement which it offered to the men had made them reliable enough to be left a little to themselves, he began some chemical researches on his own account, to try to discover some substitute for white lead, whose poisonous effects on his workmen he knew only too well. With the help of Chevreuil he decided that oxide of zinc presented the most advantages, and after securing some zinc mines, he established a factory for the preparation of this substance which has ever since been exclusively used by him and his successors.

Returning, after this benevolent undertaking had been fairly started, to his profit-sharing plans, he took up the problem of making the yearly dividend more useful to the men by inducing them to lay it by as a provision for old age instead of spending it. He found his men quite averse to exchanging any part of their cash dividend for the prospect of a retiring pension, so, without wasting time in discussion he coolly informed them that unless they agreed to what he thought best, he would add to the *noyau*, as he had a right to do, so many new members that the dividend of each would be very small. The men could not well resist this argument, and concluded to accede to his plan, by which thirty per cent only of the year's profits was divided among the workmen in cash, and twenty per cent was reserved as an addition to the fund of the Mutual Aid Society, from which pensions are paid to superannuated members and to the families of those who die.

Until 1871, participations in the profits of the house were confined to the *noyau*, but in that year Leclaire pushed his idea to its complete expression, by procuring the passage of a resolution by the *noyau*, admitting to the benefits of participation all the employés, even to the apprentices and the temporary journeymen, so that now every man who does a day's work with the Maison Leclaire shares proportionately in the year's profits.

On the 13th of July, 1872, this great man died in his cottage at Herblay, leaving behind him a strong, experienced and well organized association, which he had accustomed to doing without him by withdrawing formally some years before from the firm, and which has gone on ever since in a course of quiet prosperity. Although he transmitted to his heirs only the comparatively modest fortune of a quarter of a million of dollars, he often said that "he could not have accumulated so much even by fraudulent means without the participation of his men in his profits."

Something of the same feeling seems to be common among the masters who have successfully admitted their employés to a share in their profits. In nearly all cases when they speak of the matter, they declare that it has been with them a purely business matter, that it has been profitable to them as well as to their men, and that they are not entitled to any credit as philanthropists. However that may be, there is no question that participation promotes good feeling and consideration on both sides. Even the public usually has occasion to remark gratefully the politeness and attention

[1] "*Profit-Sharing between Employer and Employé*," by Nicholas Paine Gilman. Boston: Houghton, Mifflin & Co. 1889.

with which it is treated in the profit-sharing establishments, and Mr. Gilman's book gives many instances of mutual good feeling between masters and men, which form a pleasant contrast to the usual morals and manners of "business." In fact one of the most interesting things shown in the book to those who believe, as we do, that the prudent and honest use of one's own and other people's property ought to form a part of every child's education, is the effect of profit-sharing in teaching workmen to be careful about small things. In one establishment described, the men are so business-like that no one will even hand over to another an unfinished piece of work without getting a receipt for it, and there are many similar instances of a minute care for details in such establishments which would do credit to the more skilful and experienced manager.

BUILDING LAW.

WHAT IS MEANT BY WORK SATISFACTORY TO THE OWNER?

AGREEMENTS that work or materials to be furnished by one party to a contract shall be "satisfactory" to the other, the purchaser, are of quite common occurrence, particularly in building contracts. The exact meaning, however, of the word "satisfactory" may differ in different cases, and is not always easy to determine. Sometimes it is held to mean "reasonably satisfactory"; that is to say if the work was, in fact, properly done, the owner could not avoid payment by returning it and saying that he was dissatisfied with it.

Sometimes, on the other hand, the word is to be taken in its literal meaning; and, if the owner is dissatisfied with the article and returns it to the manufacturer or contractor, the latter can recover nothing. In such cases, however, if the work cannot be returned, as when permanently affixed to the defendant's premises, the plaintiff would generally be entitled to maintain an action for the fair value of the article deducting what it would cost the owner to make it satisfactory.

If the architect or owner, or whoever draws the contract, intends to reserve the right to reject the material if personally unsatisfactory to the owner, this intent should be made clear by appropriate and unmistakable language. If the matter is left in doubt, taking the instrument as a whole, the courts will be inclined to construe the contract as meaning to the "reasonable" satisfaction of the owner.

These remarks are induced by the recent decision of the Massachusetts Supreme Court in Hawkins *vs.* Graham, a case where steam-fitters sought to recover a bill for a heating apparatus. Our readers will probably recollect that earlier in the year reference was made in the editorial columns of this paper to a somewhat similar case arising in France, and may be interested to note the extreme diversity of the reasoning adopted by the courts in the two cases. The facts also were different; in the French case the apparatus did not work, and in the Massachusetts case it *did* work properly, though not "to the satisfaction of the owner."

In the Massachusetts case the Court lays down the common law as follows:

"The only question in this case is whether the written agreement between the parties left the right of the plaintiff to recover the price of the work and materials furnished by him dependent upon the actual satisfaction of the defendant. Such agreements usually are construed not as making the defendant's declaration of dissatisfaction conclusive, in which case it would be difficult to say that they amounted to contracts (Hunt *vs.* Livermore, 5 Pick. 395, 397), but as requiring an honest expression. In view of modern modes of business, it is not surprising that in some cases eager sellers or selling agents should be found taking that degree of risk with unwilling purchasers, especially where taste is involved. . . .

"Still, when the consideration is of such a nature that its value will be lost to the plaintiff, either wholly or in great part, unless paid for, a just hesitation must be felt, and clear language required before deciding that payment is left to the will, or even to the idiosyncracies of the interested party. In doubtful cases the courts have been inclined to construe agreements of this class as agreements to do the thing in such a way as reasonably ought to satisfy the defendant."

In the contract in question it was provided that the apparatus should be satisfactory to the owner, and there was also this clause:

"In the event of the system proving satisfactory and conforming with all the requirements as above provided for, the sum of $1,575, as above provided for, to be paid by me, after such acknowledgment has been made by the owner *or the work demonstrated.*"

The Court held that the words "or the work demonstrated" qualified the word "satisfactory," so that the contract, taken as a whole, bound the defendant to pay for the apparatus, if it, in fact, worked properly.

Oftentimes in building contracts it is important for the owner to retain an absolute right of rejection, and, generally, no injustice is thereby done the contractor. For instance, it is generally provided that either the owner or architect may reject, absolutely, certain of the materials used in the building (as piles, foundation stone, etc.), which are "unsatisfactory," this being found to be practically the easiest way of compelling the contractor to furnish proper material. Here no injustice is done, for of course the material rejected can be taken away by the contractor, he has only the expense of carting; and there is no inducement for the owner to be unreasonable in his approval of the material, as such a course would only tend to delay the work.

The above case, however, shows that it is important that the right of rejection should be expressed in unqualified terms.

COMMUNICATIONS.

[*The editors cannot pay attention to demands of correspondents who forget to give their names and addresses as guaranty of good faith; nor do they hold themselves responsible for opinions expressed by their correspondents.*]

AN OWNER'S RIGHT TO GIVE ORDERS.

BALTIMORE, MD., June 18, 1889.

TO THE EDITORS OF THE AMERICAN ARCHITECT:—

Dear Sirs,—Please give me an opinion, in the columns of your paper, on the following case:

A being the building-committee and B the architect. A employs B to prepare designs and superintend the erection of a large school-building. The contract containing the usual clause as to ownership of drawings was signed by all parties. After the work had been in progress for some time and all the detail drawings had been finished, A begins to ignore B, and gives orders to contractors directly contrary to those given by B. B remonstrates with A, and points out the evils that may arise from such a course. A, however, pays no attention to B but continues to interfere, giving the contractor orders which will ruin the design of the structure, even if it does not jeopardize the safety of the building. B has sent a notice to contractor to return all drawings and refuses to give them to A, unless A agrees to allow him to finish work his way. Has B any right to pursue such a course, and can he demand a commission for any part of his work? Yours truly, C. E. GARDINER.

[B is wrong. He is engaged to do certain work, and is to receive pay for doing it. If he refuses to complete what he engaged to do, he cannot claim any of the promised compensation, unless he has an agreement of some kind entitling him to withdraw at pleasure and to be paid for partial service. As to interference with his directions, he seems to forget that the building belongs to A, who has a perfect right to construct it in any way that he chooses. It is not likely that the contract requires that the building shall be erected as B wants it, and not as A wants it, and in default of some such contract, B gives directions only on sufferance from the owner, who can supersede and contradict them at his own sweet will. All that B can do is to make sure that the catastrophes which may follow A's directions are not visited on his head, by giving timely and liberal warnings as to the probable consequences of them. In a French court he might stand some chance of being consoled for his experiences by having damages awarded him for injury to his professional reputation through the mangling of his design, but an American jury would find it hard to comprehend anything like artistic property.—EDS. AMERICAN ARCHITECT.]

NOTES & CLIPPINGS.

PROPOSED SUBMARINE BRIDGE UNDER THE SOUND.—Under the paradoxical name of a submarine bridge, a design has been put forward by a Swedish engineer, Mr. Rudolf Lilljeqvist, A. M. I. C. E., for making a permanent railway communication between Sweden and Copenhagen. Although only 2½ miles apart, traffic is frequently interrupted during the winter months by ice, and the trade between the two countries greatly inconvenienced. The proposed structure, which would join Elsinore to Helsingborg, is a bridge composed of 100 feet spans, and carrying a single line of railway. It is to be submerged to such a depth as to allow ample seaway for all classes of ships to pass over it. To protect the trains against the water the entire bridge is to be surrounded and encased by a tube, composed of an outer skin of iron and an inner skin of steel, with the intervening space filled with concrete. The weight of the tube would be such that it would nearly float, and thus would not be subject to any transverse strains. It is foreseen that the outer skin might possibly rust away in course of years, but it is believed that the concrete would remain intact and perfectly protect the steel. The piers would consist of ordinary caissons filled with concrete and placed about 100 feet apart. The tubes would rest on these piers and the girders would take a bearing on blocks inside the tube immediately over the piers. The tube would be built in 100-foot lengths, floated out and lowered into place. The piers would be built in concrete by aid of caissons, and their surface would be formed to receive the tubes, which would be firmly secured to them. As an additional safeguard a massive collar of concrete would be moulded over the joint. The concrete shell would be in lengths to allow for expansion, while the metal shells would be continuous. It is proposed to use in the erection pontoons of the kind which have been successfully employed in building the Tay Bridge. These are rectangular in form, and have a leg at each corner worked by an hydraulic ram. Such a pontoon is floated into place and then the legs are thrust out until the whole becomes perfectly stable. On these pontoons would be placed all the necessary appliances for founding the piers and lowering the tubes into position. The estimate places the cost between 600,000*l.* and 700,000*l.* for the submerged portion, without the approach

tunnels. The advantages claimed for this scheme over a submarine tunnel are the safety and rapidity of construction, and the avoidance of unforeseen difficulties. — *Engineering.*

Fans or Hot-Water. — The entire absence of sanitary arrangements in Chinese towns and villages being well-known, it goes without saying that the laws of hygiene are utterly and entirely neglected. There is no isolation of infectious diseases, and no attention is paid to causes of death unless there is supposition of violence. According to our ideas, therefore, Chinese cities ought to be hotbeds of disease, subjected regularly to those terrible epidemics which, with us, are invariably associated with the neglect of sanitary laws. Strange to say, such is not the case. Epidemics come and go without any apparent reason, appearing, perhaps, suddenly, causing a heavy mortality for a short time, and then as suddenly disappearing again, thus affording an endless field of speculation to the foreign savant. But, speaking generally, Chinese towns enjoy an immunity from these dangerous outbreaks almost as complete as that of well-drained European communities, and the cause of this puzzling and curious phenomenon has been variously explained. The fact is all the more striking when taken in connection with the contaminated water-supplies of Chinese towns, the effect of which on Europeans has been manifested over and over again in the heavy mortality which overtook them previous to the adoption of precautions enjoined by modern sanitary science. The healthiness of Chinese cities has been ingeniously attributed by some people to the universal habit of fanning, a practice which is said to keep the atmosphere in constant circulation. How far this explanation can be deemed to suffice we must leave to experts to decide, but, so far as a contaminated water-supply is concerned, we believe the real secret of immunity from its evil effects to lie in the universal custom of boiling all water intended for drinking. As a matter-of-fact, the Chinese never drink cold water. The national beverage, which, in a true sense, may be said to cheer but not inebriate, is tea, and this is always "on tap," even in the houses of the very poor. The native aversion to cold water is undoubtedly carried to extremes, and certainly induces diseases which might easily be avoided by a judicious system of outward application. In the matter of ablutions it must, however, be admitted, that the Chinese enjoy facilities which, however little they are taken advantage of, are far in advance of anything within the reach of the poorer classes of our own favored land. Every little hamlet in China has a shop where hot water can be bought for a trifling sum at any hour of the day or night. Even in a small fishing village on a remote island in the Gulf of Pechili, where the writer spent six weeks under very unpleasant circumstances during a severe winter, this was the case, and a great convenience it proved. — *The National Review.*

An Electric Indicator for Lightning-rods. — A new instrument for recording when a lightning-conductor has acted is being brought out by Messrs. Hoyer and Glahn, of Schönebeck. Briefly described, this instrument consists of a galvanometer with a long magnetized needle pivoted on a horizontal axis, and kept horizontal by a small weight. Below the needle is a soft iron core surrounded by a solenoid, which is coupled as a shunt between two points of the lightning conductor; and if this core becomes excited, one or the other end of the magnet is attracted, and remains attached by virtue of its own permanent magnetism. The inventors thus hope that the instrument will indicate not only through which conductor a lightning discharge has passed, but also the direction of the discharge, whether up or down. Instruments would be fixed on the various lightning-conductors, and by mere inspection of them after each thunderstorm it would be easy to see which of the conductors are most likely to be chosen by the lightning, and should therefore receive the most attention to keep in good order. — *Inventor.*

Historic Inundations. — No flood so disastrous as that in the Conemaugh region has ever before been known in the history of this country. In the Mill River disaster near Northampton, Mass., in 1874, in which a number of villages were destroyed through the bursting of an ill-constructed reservoir, only 144 were lost, and in the same year, when the rivers of Western Pennsylvania overflowed their banks as the result of an unusual downfall of rain, the number of persons who were drowned was but 220. In the year 1758 more than 400 families were drowned in an inundation at Glasgow; at Dort, in Holland, in 1421, the sea broke in and drowned 100,000 people, and in the most memorable of all inundations — that which in 1530 was caused in Holland by a general failure of the dykes — the loss of life was reckoned at 400,000. In Catalonia, in 1617, 50,000 persons perished by flood; in Silesia, in 1813, 6,000. The loss of life during the recent floods in Austria-Hungary and in China has never been fully reckoned up, and though 100,000 persons are said to have been drowned in the Chinese inundations, the figures are not trustworthy. — *New York Commercial Advertiser.*

To Protect Wood against Fire. — An investigation has been made by Professors Boudin and Donny, of the Ghent University, at the requisition of the Belgian Minister of Public Works, in regard to rendering wood uninflammable. They reported that to deprive wood to a considerable extent of the property of catching and communicating fire it is sufficient to coat it with a suitable composition. A practical process must not be too expensive nor take too much time, and the substance used must not attack any metal used in connection with the wood. Two methods of treatment may be mentioned. One is the injection of saline solutions, which appears but little applicable except to small pieces of wood, and may be dangerous in the case of wood of large dimensions. A concentrated solution of phosphate of ammonia, although expensive, is undoubtedly the best substance to apply by injection. Certain substances, notably chloride of calcium, should be rigorously excluded, because they would keep the wood constantly damp. This method may be applied to small articles by immersion, and the solution should be hot. In the majority of cases, including existing structures, applying some coating with a brush is the only practicable treatment. The wood thus coated should present a neat appearance, and should be capable of receiving a coat of ordinary paint, nor should either coating deteriorate within a moderate time. The best substances for such application are cyanide of potassium and asbestos paint. — *Fire and Water.*

Malleable Bronze. — A patent has been taken out both in England and France, by Mr. A. Sentex, Mr. C. Marechal and Mr. A. Saunier, establishing a process for producing malleable and ductile bronze bars or plates which are free from cracks and blow-holes, are "inoxidizable," and which may be "rolled and drawn with the greatest ease." Moreover, the metal has the appearance and "sonorosity of gold." One-and-a-half kilos. of tin are purified by melting under nitre. Ten kilos. of copper are melted and 50 grammes of equal parts of nitrate and cyanide of potassium are added for the double purpose of reducing the oxides and "fattening" the metal. Then 25 grammes of bitartrate of potassium, with the same quantity of cyanide, are added, and, after poling, the tin is introduced; 25 grammes each of sal-ammoniac and cyanide are thrown on, 1 gramme of "phosphuret of copper" introduced to "impart mildness," and 20 grammes of "Marseilles soap" added, which still further "fattens" the metal. Finally, 1 gramme of sodium is added at the moment of casting. The metal, if cast in sand, may contain more tin, and if the proportion of tin be reduced, the quantity of phosphorus and sodium may be increased. — *Iron World.*

TRADE SURVEYS

There exists a deep anxiety in business, railroad and financial circles over the possibility of a reaction from the present healthful conditions. The exportation of nearly ten million dollars in gold within two weeks, and of some twenty-eight millions since April, the decline in the surplus reserves within a year from nearly twenty-six millions to some nine millions at this time, the urgent demands for funds in the West, the narrowing margins in all lines of business, the general upward tendency in prices — these and other facts and influences are taken by many to indicate that a turn may be taken that will be to the disadvantage of those who have large engagements at fixed prices On the other hand, one hundred railroad companies show an increase in gross and net earnings over last year, but this comparison is made with roads which lost twenty-three million dollars last year. The stocks of anthracite coal are increasing, and are now almost one million tons. The soft coal trade is about as active as usual, but the mining capacity east of the Mississippi is away ahead of demand. Lumber operations are conducted on a large scale, and last week some of the largest contracts of the season were placed, not only among railroad companies, but in the trade at large. Car-builders are in the market to-day for oak and yellow pine. Walnut exporters are doing well. Poplar holds its own everywhere. Trade combinations in lumber, except in Georgia, are maintaining their grip. The policy of wholesalers and retailers is to buy as the trade calls, and to avoid accumulations. It is this that accounts for the generally strong prices. In iron and steel no striking transformation is apparent. Steel-rail mills are filling up, and prices are now, for the first time this year, strong at $28 in the East on all except exceptionally large orders. Bridge-iron makers are also better off than for months, and in this statement plate-iron makers may be included. Nail-makers have been getting rid of large accumulations. Crude-iron makers are doing what they can to push prices on fall deliveries upwards. There is no room for speculative movements in petroleum. Wool is quiet, but strong. Textile manufacturers are making excellent progress, carefully avoiding such a production as would threaten to jeopardize prices through enforced auction sales. Imports are heavy, but the consumptive requirements are extraordinary. It is proper here to remark again that the trust-forming tendencies are stronger than ever; that new combinations are being made and projected; that capital is more confidehtly seeking opportunities therein. The smaller interests are obliged to combine in a great many instances. Legislative control has not retarded or controlled these combinations, and they have apparently entered upon an era of greater activity and scope. In many respects their formation is but the natural outcome, and is in conformity to the general law of progress. In some other respects damage is being done and greater damage threatened. Eventually there will, no doubt, be a sort of popular granger-like agitation and protestation against the entire system.

The architects are closing a very successful half-year. Their statements for the coming half-year, so far as made, point to even greater activity. House-building, especially of small houses, has been very profitable, particularly in the newer and smal'er manufacturing centres throughout the interior. The distribution of lumber of the past thirty days shows the extent of building activity. Building labor is in demand Wages are good, and there are no strikes worth noting. The larger cities west of the Mississippi are keeping up their last year's record. Chicago lumber dealers have contracts for about all the stuff they can get out. The builders of houses, factories, bridges and of large manufacturing establishments in the sections now the theatre of the general industrial revival, have about all they can hurry through before cold weather. What has been said of the activity in the Southern States can only be repeated so far as opportunities for investment are concerned, there are as many as ever, and the inflow of capital continues. Leading financial authorities remark that there never was a period when so much investing was going on in purely industrial and commercial channels. Of course the whole business world is on tip-toe for a general advance in values that will make plants and investments more productive, but the reasons for such anticipation are difficult to assign. The ship-builders were never busier, and in a few months one of the finest, if not the finest yard on the American continent will be open for work at Newport News. The Bethlehem Gun Works are being hastened forward, and much heavy machinery is being put in to turn out exceptionally large work. There is nothing to warrant fears of a reaction in trade. A larger percentage of business is being year by year done on practically a cash basis. The West is yearly becoming more and more financially and commercially independent of the East, and, therefore, self-supporting. A panic or depression in one locality is not as likely to extend to others as a few years ago. National legislation is becoming less political and more of a business character, and business interests and requirements are more clearly studied, and the wishes of business men more respected.

DETROIT HEATING AND LIGHTING CO.'S (BOLTON PATENT) HOT-WATER HEATER.

THE ADVANTAGES OF HOT-WATER HEATING.

THE advantages of hot-water heating over all other methods are manifold. It is the most healthful system known to the scientific world, the most economical in the consumption of fuel, the most durable and the only one which is absolutely safe; it requires the least care, and in its simplicity outranks the plainest of all plain stoves.

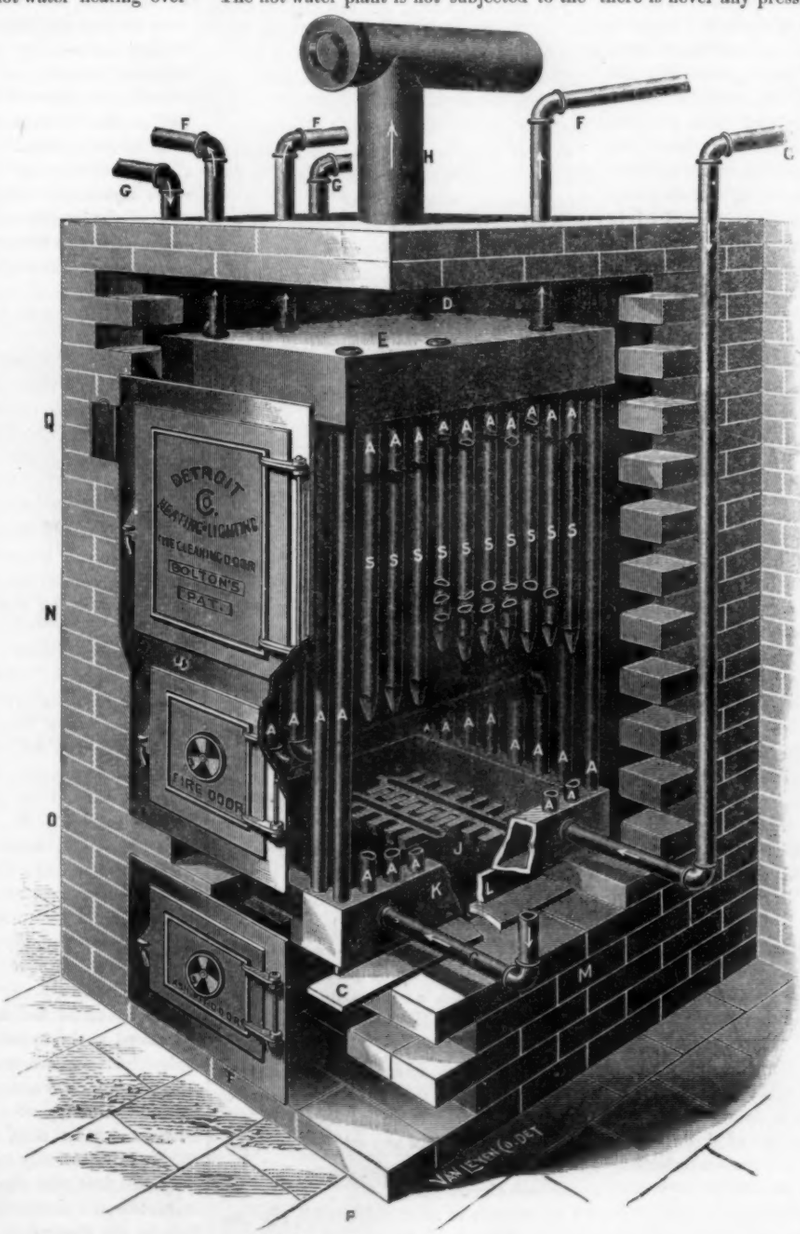
By this system an even temperature, soft and pleasant and free from all poisonous gases, is obtained, and controlled in all parts of the building, regardless of the outside temperature. There are no draughts or blasts of hot or cold air so inseparable with the operations of the hot-air furnaces.

Heat is obtained by the hot-water system as soon as the fire is lighted and continued until after the fire is out and the water cold. With steam no heat is secured until the water boils, and the fuel consumed up to that time is wasted. With the hot-water system the heat is controlled at the furnace, the fire and fuel being directly and immediately regulated to meet the requirements, while with steam the valves of the radiators are made use of and the fuel in the furnace frequently consumed to no purpose. Numerous tests and years of experience prove that a good hot-water system will consume from twenty-five to thirty per cent less fuel than the best steam plants, and from forty to fifty per cent less fuel than a hot-air furnace.

The hot-water plant is not subjected to the wear and tear caused by uneven pressure, expansion and contraction of pipes and regulators that is common to the steam system, and properly put in will last three times as long. Its longevity in comparison with hot-air furnaces is even greater.

The hot-water system cannot explode, as there is never any pressure except the weight of the water, the pipes being open to the atmosphere. There is absolutely no danger from fire, as the fire-box is encased in iron and brick, and the pipes and radiators cannot be heated above 190° to 200°.

The simplicity of a good hot-water system is one of its chief merits. It requires less attention than an ordinary base-burner stove.



THE SPECIAL ADVANTAGES OF OUR HOT-WATER HEATER.

The fire-pot and heater is so constructed that it possesses the largest heating surface of any system now offered the public. (See cut). It is thereby able to heat a larger volume of water in a shorter period of time than any other and is, therefore, more economical in the consumption of fuel. This superiority is obtained partly by using wrought-iron tubes instead of cast-iron, which are thicker and consequently require more heat to affect the water within; partially by the vertical arrangement of the tubes, whereby the water begins to circulate with the first heat (a newspaper furnishing sufficient heat to start the water in motion) and partly by the tubes being brought into direct contact with the heat

in such a manner that no useless fire-bricks intervene or clinkers can form to absorb any portion of the heat.

In point of durability there is no heater that can equal it. In addition to the advantages in its construction, above noted, this heater possesses a merit not to be found in any other. The entire heater is practically one piece, all parts being screwed together. There are no bolts, no flanges and no packings to leak in it — fatal defects that are the source of constant annoyance and frequent repairs in other heaters. Only the very best materials and the most experienced workmanship are employed in its manufacture.

The cut which shows how the heater is encased in brick and iron, speaks of its perfect safety. Its location (generally in the cellar or basement) is further security in this respect. The exposed surface of the covering, either at top, bottom or sides, does not give forth a particle of warmth. A sulphur match left for months on the top will not ignite, and wood, or even paper, can be left on the exposed pipes with perfect impunity.

The extreme simplicity and cleanliness of the heater adds to its superiority over all others. Every portion of the heater is plainly visible, ready of access, and can therefore be cleaned easily. There are no recesses for soot to accumulate in. The fire requires less attention than an ordinary coal stove, a replenishment of the fuel once in twenty-four hours being sufficient during average winter weather, and once in twelve hours being necessary only in extreme cases. No skill is required in firing. Any desired heat can be obtained at once, and an equable temperature maintained in every room in the house regardless of distance from the heater. The heater is entirely noiseless in its operations.

References and further information will be cheerfully furnished upon application to the

DETROIT, MICHIGAN.

"HIS SECOND SUCCESS."

Over twenty years ago, Mr. E. T. Barnum, of Detroit, commenced in a small way the manufacture of wire and iron work. By industry and perseverance the business rapidly increased, and gradually outgrew the different quarters at which it was conducted, finally becoming so large that Mr. Barnum found it to his advantage to incorporate, although he still continued to be the sole manager.

The business was then pressed with redoubled energy. A large factory, the largest in the world, was built and thoroughly equipped with the very best machinery then known, nearly all of which was especially constructed for his work, and an immense fortune seemed to be practically within his grasp.

But one morning Mr. Barnum saw that factory, the reward of the persevering diligence of years, go up in smoke, leaving only the bare, blackened walls. However, with that untiring energy which had built up one fortune, he commenced again, even before the smouldering ruins were cold.

This was in 1885. It was a difficult and disheartening task to again trudge slowly along the financial stairs up which he had pressed for so many years, and down which he had been so recently and suddenly hurled, but he kept quietly and steadily at work, and is now again firmly re-established with new works built under his own supervision and for his own special use, and equipped with the latest improved machinery.

The present factory is located at Nos. 715, 717, 719 Grand River Avenue, where everything in the line of wire and iron work can be had, and any special order promptly filled.

Mr. Barnum sells goods not only in every State and Territory in the United States, but in Canada, Australia, Brazil, Europe, in fact, there is no considerable portion of the civilized world but what is more or less familiar with his work.

Mr. Barnum is proud of his second success and his course is a good illustration of the fact that in this country all obstacles and misfortunes are overcome by intelligent, diligent and patient work.

He has just issued an illustrated catalogue which will be mailed upon application. All correspondence should be directed to

TRAP-SEAL PROTECTION.

Letter from Mr. Putnam to the *Sanitary News*, comparing the "Trap-Vent" with the "Sanitas" system of plumbing, in reply to Mr. Houman:

BOSTON, MASS., November 23.

To the Editor:

Your correspondent, Mr. Houman, in reply to my letters on "Trap-Seal Protection," asserts that a simple S-trap, protected against siphonage by some form of automatic air-supply, is better than an antisiphon or seal-retaining trap on the ground of cleanliness.

Several important considerations affecting this question seem to have been overlooked by Mr. Houman, which appear to me to be sufficient to reverse his conclusions; and, as these considerations are founded on very careful experiments of mine, some of which have never as yet been published, I will avail myself of your invitation to contribute our experiences on the subject, to present them here.

They may be summarized as follows:

1. No automatic air-supply has ever been invented, nor probably ever will be, which will form a reliable protection against siphonage, although such a form of air-supply, as your correspondent recommends, seems to me to be much more reliable in many ways than the ordinary back-vent pipe.

The scouring properties of a trap are due not to the *absolute* size of its body, but to its *relative* size as compared with the discharge outlet of the fixture it serves.

I have found a common S-trap used under an ordinary small-outlet wash-basin, nearly filled with a jelly-like filth, through which the waste-water passage left was no larger than a man's little finger or than the free outlet of the basin, and not more than a tenth of the capacity of the trap and pipe when new.

There are no "*greatly enlarged cavities*" in a scientifically designed (the "Sanitas") seal-retaining trap. When such a trap is used under a fixture having an outlet as large as its waste-pipe, and the fixture is properly used, so as to fill these pipes "full bore," the scour will be sufficient to keep all parts of the trap clean. When such a trap fouls, the fault is in the fixture or in its usage, and not in the trap.

With improperly formed or used fixtures any trap will, and must, necessarily foul in time, and an S-trap is no more exempt from this law of nature than any other. Even perfectly straight and smooth pipes will foul under such circumstances.

The safe rule to avoid this trouble is *to construct every fixture on the principle of the flush-tank, and to use it as such*, and it is self-evident that no other practice will keep the waste passages clear.

2. Ordinary S-traps, recommended by your correspondent, are liable to lose their seals through other causes than siphonage, such as back-pressure and capillary action, against which the automatic air-supply forms no protection whatever; whereas, our seal-retaining trap is formed with reference to withstanding those adverse forces, and, properly set, it affords perfect security in these particulars.

3. The volume of water in an ordinary S-trap is too small, and the trap is not scientifically designed with a view to the perfect preservation of its seal against evaporation. The automatic air-supply is infinitely better than the back-venting system in this respect, inasmuch as it does not materially increase the evaporation of the water-seal; but the S-trap in the combination is at fault. In a well-designed seal-retaining trap all danger from evaporation is practically avoided.

4. Accepting, then, as evident (as we must) the fact that any pipe or any trap under improperly formed or used fixtures will foul in time, it becomes clear that the seal-retaining trap is safer than a vented S-trap, because even a partial clogging of the latter will close the mouth of the air-supply, and thereby at once destroy the entire value of the device without announcing it to the house-owner; whereas, a clogging of the former will simply retard the outflow of the waste-water, which will at once announce the obstruction and lead to its removal. In no case will such clogging destroy the ability of the trap to resist siphonage, since the relative proportions of the interior remain the same, and the very obstruction which prevented the escape of the waste-water also prevents siphonage and the escape of sewer-air. Practice has shown this theory to be true, after a test of five years.

It is now well known that the mouth of the ordinary back-vent pipe becomes quickly clogged by grease under kitchen and pantry-sinks, and this objection to back-venting is now considered so serious that many practical plumbers are urging its abandonment on this ground alone.

Now, the mouth of the automatic air-supply pipe is, in this respect, precisely the same, and is clogged in exactly the same manner; hence, it must be condemned on the same grounds.

Your correspondent objects to "enlarged cavities" in traps. *What is the mouth of the automatic air-vent pipe but exactly such a cavity?* It is worse than that, since it is a cavity placed precisely where it will be first and easiest filled with filth, and when filled it will never be washed out again since the scour does not reach it. Still worse than that, it is a cavity which, when once even partially filled, will cause the air-pipe to lose its original protecting power; and with this loss the value of the entire apparatus is destroyed.

Finally, worst of all, this loss of protecting power occurs without the slightest warning to the house-owner.

The mouth of the air-supply is, and must be, placed at the upper side of the trap or its outlet-pipe. Grease and those allied matters which cause obstructions in the waste passages by adhering to them are lighter than water, and must float, therefore, to the top. Hence, it is evidently exactly there that clogging must first take place, and cavities placed there, like the mouth of the air-supply pipe, must be the first to be clogged, and in practice it is found that this is the fact.

With our seal-retaining trap, on the contrary, no such dangerous cavities exist. The water-

passage is substantially of the same calibre throughout, and even should clogging through careless usage take place, it could do no harm, but would at once announce itself and be removed.

5. The automatic air-supply pipe, in combination with a trap, forms a somewhat expensive and delicate combination, involving quite a number of joints throughout its several parts, and the use of delicate moving parts and sensitive adjustments and also of free mercury. It would also seem as if water thrown up by back-pressure into the valve and mercury compartment might in time easily destroy its operation.

The seal-retaining trap, on the contrary, is simplicity itself, has no moving parts, and is of solid and durable construction throughout.

6. To recapitulate, then, the very arguments raised by your correspondent in favor of the S-trap, with automatic air-supply, are really the strongest against it, and are in favor of the unvented anti-siphon trap.

The former (the vented S-trap) is not secure against siphonage; has no resistance whatever in itself against back-pressure or capillary action; is not constructed with a view to resisting evaporation; has, as a necessary part of its construction, an "*enlarged cavity*" placed where it is most easily clogged by grease and filth, and where such clogging is fatal to its operation and extremely dangerous to the house-owner; and it is expensive, complicated and delicate in construction.

From all these objections our seal-retaining trap is free, and its practical trial for many years has amply demonstrated the truth of the statement. Respectfully yours,

J. P. PUTNAM.

CHANGE OF PARTNERSHIP.

THE partnership heretofore existing between the undersigned under the firm name of Haines, Jones & Cadbury, has this day been dissolved by mutual consent.

THOMAS J. JONES,
JOHN W. CADBURY,
JOEL CADBURY,
WILLIAM H. HAINES.

November 30, 1888.

HAVING purchased the plant of the late firm of Haines, Jones & Cadbury, we would call attention to our facilities for supplying all kinds of plumbers' and steam-fitters' supplies, and solicit a share of your future trade.

HAINES, JONES & CADBURY CO.,
1136 RIDGE AVENUE, PHILADELPHIA, PA.

SOME NEW SYRACUSE STRUCTURES.

THE scaffolding, which has encumbered the Everson and Lynch Blocks, on South Salina Street, has been removed, and two handsome buildings are presented to view. There is a certain similarity in the structures owing to the free use of pressed-brick and terra-cotta.

The Everson Block, which adjoins the Weiting Block, is from designs by Messrs. Baxter, Buell & Tabor, and is as near fireproof as it is possible to make it, being constructed solely of iron, stone, brick and terra-cotta, none of which have very good burning qualities. This building is seven stories high, and has a frontage on Salina Street of forty-four feet, and from cornice to sidewalk it is just 100 feet. The ground-floor will be taken up with a double store 40 x 137 feet, divided through the centre by nine massive iron columns. The second-story front will be finished for occupancy by a bank, and will be fitted with stone and steel vaults. The front of this building is very attractive, and is beyond question the most imposing structure on South Salina Street. The piers each side of the stores are of Carlisle brown sandstone, and the second and third stories are of the same material. Above the third floor the front is of iron, brick and terra-cotta. No wood is used, nothing but iron girders and pillars from cellar to roof. The chief attraction centres in the terra-cotta work, which is of very choice design. It shows what can be done with architectural terra-cotta, whether used in friezes, window-caps or coping. The latter is a work of art in itself, and the New York Architectural Terra-Cotta Company, of No. 38 Park Row, New York City, naturally feel proud of their work, as do the architects. The iron-work is from the Trenton, N. J., Iron-works, which is being erected under the supervision of James B. Cornell, of New York, while Messrs. O'Brien and Hoolihan, of this city, have the contract for the masonwork. The Lynch Block adjoining, from designs by Architect Russell, shows a magnificent front, stone, pressed-brick and terra-cotta being the materials employed. There are some fine designs in the terra-cotta work, which is furnished by the same company as above mentioned. This building, which is being erected by Messrs. O'Brien and Hoolihan, is six stories high, and reflects great credit upon its designer. These two blocks, artistically considered, are the handsomest structures on Salina Street.

The new Grand Opera-House Block is being rapidly pushed. There was a hitch over the employment of non-union masons by Messrs. Ryan & Rafferty, which was adjusted by Mr. Moore going ahead with the work himself. The plans and elevation for the block have been perfected by Architect Russell, and McElfatrick & Son, the New York theatrical architects, will attend to the plans for the opera-house proper. The block will be four stories high, with an additional mansard in the centre of the block. On the ground-floor there will be space for six stores, running from Genesee to Fayette Streets. The opera-house will be located on the second floor, as in the old building, and will be reached by a twenty-foot lobby from Genesee Street. The upper floors of the block fronting on Genesee Street, will be devoted to offices and halls, and every foot of space will be utilized. The building will be constructed of Trenton brick and terra-cotta, some of the latter showing some very fine carving. This work is also furnished by the New York Company. The style of architecture belongs to no particular school, and may be described as "modern." The general arrangement of the interior of the opera-house will differ very little from the old structure. It will be much more elaborate, and will be a model structure of its kind, with every precaution for safety and means of exit in case of fire. What it will cost to erect this new temple of amusement, Messrs. Moore and Lynch will know when they get through. It is intimated that it is contemplated to add another story to this structure, which would make it five stories, with mansard. — *Syracuse Real Estate Record, December* 8, 1888.

MAHOGANY.

IN our desire to extend our business in the sale of Mahogany it occurs to us that if more were known regarding this standard wood, its adoption and use would become much more general. We believe an impression exists that it is an expensive wood only to be indulged in by the few — this however is not the case.

The facilities for procuring Mahogany in its native country and the devices for reducing it into lumber have so improved, that its cost to-day compares favorably with some of our domestic hardwoods, notably Cherry.

We are prepared to supply Mahogany of the best texture and grain as low as fourteen to sixteen cents per foot on cars in New York — the grade known as "seconds" at seven to eight cents per foot — and a grade between the two at ten cents. In measuring these grades last mentioned allowance is made for faults, and there are very many places where for small work these grades prove very advantageous.

The cost of working Mahogany is certainly not greater than any of the domestic woods — computing then for any given work, this difference in price of the raw material, the cost of Mahogany over the domestic hardwoods will be found to be small.

It is universally acknowledged that Mahogany warps less, stands better, and is in every way more reliable than any other wood known: it is the only wood that grows more beautiful with age, all other woods grow dull and deteriorate in appearance. Mahogany has been called the "king of woods," and it imparts to an interior, a tone and richness conceded by all. Will not therefore the intrinsic value of a private residence or a public building finished in Mahogany warrant the use of this wood at a greater difference in cost than we have here set forth?

Inasmuch as there appears to be a vast deal of misinformation regarding Mahogany, we are led to place before you the actual facts. We are sometimes met with the assertion that there is now no Mahogany, that it is all "Baywood." As well might one argue that there is now no Black Walnut from the fact that it is no longer supplied (to but a small extent) from Ohio and Indiana, but largely from the Indian Territory. Thirty years ago Mahogany was commercially designated as "St. Domingo" (from the Island of St. Domingo) and "Baywood" or "Bay Mahogany" (from the vicinity of the Bay of Honduras in Central America). The Central American wood was rightly condemned as being too soft, of light weight, straight-grained, and characterless: in later years it has ceased coming to this market, but one cargo having arrived at the port of New York (now the largest Mahogany market in the world) in six years. St. Domingo Mahogany likewise exists, we may say, in name only. The original growth of the Island of St. Domingo has been long since utilized, and the importation of small lots at exceedingly long intervals are only of the small and stunted second growth, crooked, stained and defective, only individual logs of good size and quality are now and then to be secured. The markets of the world are now therefore principally supplied from Mexico. The Island of Cuba furnishes considerable quantities of a smaller size (more especially valuable for small work) which is hard and of good texture; but the great bulk of the Mahogany used in later years is supplied from the forests of Mexico. This great area of country however produces not only our largest and most beautiful grades of Mahogany, but also some of the softer and less desirable grades, somewhat resembling the Baywood or Honduras Mahogany of olden time, though still better.

This we regard as an important fact to be noted by architects and others interested in the use of Mahogany, for here arises the

difference in opinion on our Mexican Mahogany of the present day, some claiming it is soft and unlike genuine Mahogany, and others that it is hard and beautiful in texture. It is *both*, as we have explained. Let the architect or householder specify Frontera Mexican Mahogany or similar, and if the specifications are followed the result will be all that can be desired. Frontera is the shipping point for the better grades of Mexican Mahogany.

In the erection of buildings of all classes, there is in general a steady advance toward improvement. In recommending the use of Mahogany we believe the simple statement of facts is sufficient to warrant its adoption, and architect and client will derive in its use a satisfaction far outweighing the small advance in cost. We therefore feel that we are warranted in calling the attention of architects and builders to this subject, and asking their influence and co-operation to the end indicated. We shall take great pleasure in giving attention to any correspondence, and in giving any further information in our power.

W. E. UPTEGROVE & BRO.,
457 East Tenth Street, New York, N. Y.

NOTES.

The sales of Babcock & Wilcox boilers during October and November, 1888, were as follows: Chicago Sugar Refining Co., Chicago, Ill., fourth order, 1,088 horse-power; Brooklyn Sugar Refining Co., Brooklyn, N. Y., fifth order, 488 horse-power; Westinghouse Brake Co., Wilmerding, Pa., third order, 480 horse-power; Aitken, Mitchell & Co., Gowan, Glasgow, Scotland, 110 horse-power; Societé Générale des Monteurs de Boites d'Or, Besançon, France, 35 horse-power; James Simpson & Co., Pimlico, London, sixth order, 414 horse-power; James Miller & Co., Melbourne, Australia, 312 horse-power; R. & J. Salmond, Aberdeen, Scotland, 40 horse-power; A. Verastegui, Havana, Cuba, 300 horse-power; Singer Mfg. Co., Kilbowie, Scotland, eighth order, 93 horse-power; N. K. Fairbanks & Co., St. Louis, Mo., 140 horse-power; John Collins, Denny, Scotland, fifth order, 240 horse-power; Brazilian Extract of Meat & Hides Factory, Ltd., Parcdas, Porte Alegre, Brazil, 124 horse-power; Schwarktzopff Co., Berlin, Germany, 82 horse-power; Kansas City Electric Light Co., Kansas City, Mo., second order, 276 horse-power; Central Railroad of New Jersey, Jersey City Station, 368 horse-power; Girard Estate, Philadelphia, Pa., fifth order, 122 horse-power; Summerlee & Mossend Iron & Steel Co., Mossend, Scotland, 700 horse-power; James Simpson & Co., Pimlico, London, seventh order, 124 horse-power; Maitland, Phelps & Co., New York City, for Luz Electriccita, Oxaca, Mexico, eighth order, 61 horse-power; Edison Electric Illuminating Co., Paterson, N. J., second order, 250 horse-power; Calvart & Co., Gothenberg, Sweden, 124 horse-power; Sharp & Kent, London, England, 104 horse-power; C. Tattersall, Manchester, England, 75 horse-power; Edison Machine Works, Schenectady, N. Y., fourth order, 146 horse-power; Devoux Freres & Co., Adrimont, Vorviers, Belgium, 75 horse-power; R. E. Crompton & Co., Chelmsford, England, 165 horse-power; Anthony Shaw, Son & Pamphilon, Burslom, England, 166 horse-power; Gomex & Pearsall, New York City, for export, 73 horse-power; Decastro & Donner Sugar Refining Co., Brooklyn, N. Y., eighth order, 385 horse-power; Beau & Bortrand Faillet, Paris, France, 120 horse-power; Alexander B. Bary, Moscow, Russia, nineteenth order, 73 horse-power; Ing'o Jesus Maria, on Sta. Ana, Cuba, 150 horse-power; Berliner Machinenbau Actien, Gesellschalt, Berlin, 122 horse-power; Prentice Brothers, Stowmarket, Eng., 105 horse-power; Agar Cross & Co., Glasgow, Scotland, 51 horse-power; American Brake Co., St. Louis, Mo., 125 horse-power; Westinghouse Electric Co., Pittsburgh, Pa., 328 horse-power; Anglo-American Brush Electric Light Corporation, Ltd., London, England, fifth order, 84 horse-power; Anglo-American Brush Electric Lt. Corporation, Ltd., London, England, sixth order, 62 horse-power; Joaquin Arango, Rio de Janeiro, Brazil, 35 horse-power; Jonathan Ring & Son, Philadelphia, Pa., second order, 104 horse-power; Charles McNeil, Jr., Glasgow, Scotland, 126 horse-power; M. M. Mosser & Fils, St. Etienne, Loire, France, 45 horse-power; Chavanne Brun & Co., St. Chamond, France, 248 horse-power; Charles Schlaeber, Paris, France, 20 horse-power; Alexander B. Bary, Moscow, Russia, twentieth order, 104 horse-power; William Beardmore & Co., Parkhead, Glasgow, Scotland, 140 horse-power; Consolidated Electric Light Co., New York City, second order, 250 horse-power; making a total of 9442 horse-power.

The Whittier Machine Company have recently constructed for the United States Treasury Department at Washington, D. C., an hydraulic freight elevator, operated by their Pressure Tank System; for Mr. John H Clark of Amesbury, Mass., one hydraulic freight elevator; for the Continental Bank Building, Boston, a steam elevator for their passenger service; for Dr. Baker's house, No. 22 Mount Vernon Street, Boston, an hydraulic passenger elevator; and for the Coy Paper Company of West Claremont, N. H., a horizontal steel boiler, five feet in diameter.

The manner in which Messrs. Dexter Bros., propose to illustrate their advertisement will make it worth while to look at it each week.

The American Architect and Building News

ADVERTISERS' TRADE SUPPLEMENT.

No. 80. SATURDAY, FEBRUARY 2, 1889. Volume XXV. No. 684.

THE GEARED HOIST MACHINE.

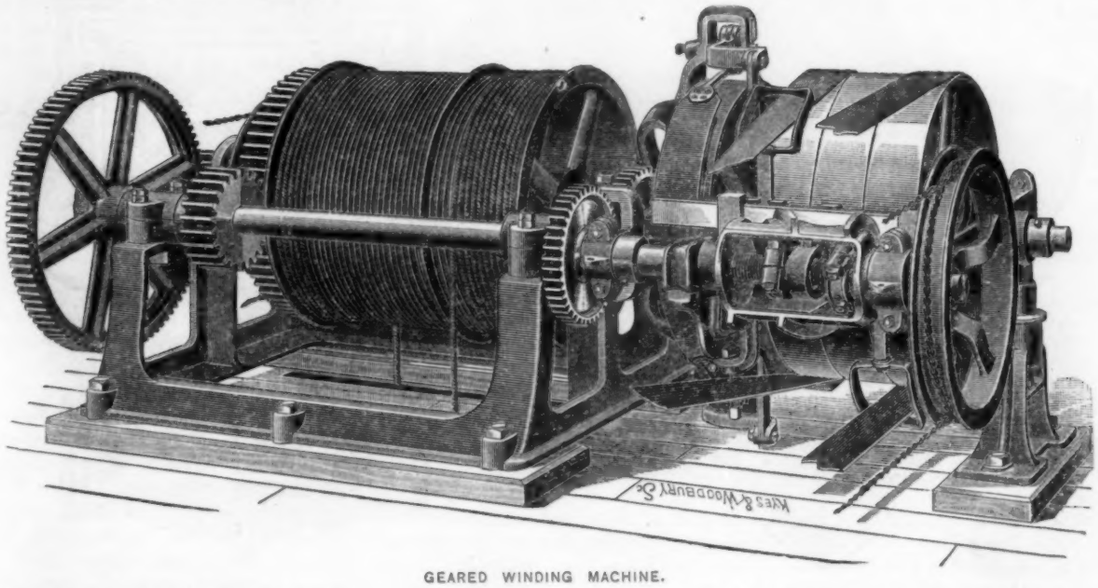
The Geared Hoist for passenger or freight elevator service as shown, has several new features; both pinion and gears are cut by the most approved methods, securing greater accuracy than has been attempted heretofore in the same class of machinery, and giving a smooth and noiseless motion at a high speed. It is provided with a Centrifugal Governor that acts in case the belts break in descending; has Slack Cable Device that stops the car instantly and applies the brake, keeping the cables taut on the drum when the car is obstructed in its descent. It is also provided with Automatic Drop Forge, Wrought-iron Stop Device, which absolutely prevents breakage. The machine is right or left hand and can be placed in any position desired as the belts will run at any angle. The pulleys are self-oiling, requiring attention only once in six months. It is manufactured by Morse, Williams & Co., Philadelphia, New York and Boston, who also manufacture Hydraulic, Worm Geared and Hand-Power Elevators.

MORSE, WILLIAMS & CO.,
PHILADELPHIA, PA.

A LARGE EAGLE.

The tower of the new City-Hall at Fall River, Mass., is to be surmounted with an immense eagle, nine feet in height with proportionate outstretched wings made of sheet copper artistically hammered into shape and very strongly made from a design furnished by William R. Walker & Son, architects, and manufactured by Thomas W. Jones at 172 Front Street, New York. It is the largest eagle ever made for such a purpose and will be a permanent ornament to the building. Mr. Jones's tower ornaments, weather vanes, finials, etc., made from all sorts of curious and unique designs of architects are to be seen from one end of the country to the other, as he uses only copper or brass — which though more expensive than other metals, is far more durable — and gilds only with pure gold leaf. Some work is still defying the elements after twenty-five years of use.

THOMAS W. JONES,
NEW YORK, N. Y.



GEARED WINDING MACHINE.

PORTLAND CEMENT.

The subject of Portland Cement is one of increasing importance, and each year finds the amount imported larger than the preceding year. When this article was first introduced into America, it was almost exclusively English in its manufacture. For some years, this held the preference, but the German manufacturers were steadily improving, and they forced their way to the front until at the present time the German Portland Cements are acknowledged by experts and the principal artificial-stone manufacturers to be the best on the market.

This is especially true in regard to the cements from Stettin which have always been noted for their quality. The Stettin ("Anchor" brand) Portland Cement, as its names implies, is made near the city of Stettin. It has been in use in the United States since the middle of 1885, and since that time has met with great favor.

It possesses the following merits:

1. It is always uniform.
2. It is very finely ground.
3. It is of a good color.
4. The packages are large and of full weight.
5. The barrels are lined with thick asphalt paper.
6. It is cheap, because it will do more work than most other brands, as it will carry more sand.
7. It never fails to give satisfaction.

Last year between 10,000 and 15,000 barrels of this cement were used in St. Augustine, Fla., in the construction of the large hotels and the restoration of the old Spanish Cathedral, etc.

A recent test by the Dock Department of New York, gives the following results:

Fineness. 98½ per cent through a 2,500 mesh sieve.

(The Dock Department only require 90 per cent.)

Tensile Strength. Mixed neat and broken in seven days — 467 pounds per square inch.

(The Dock Department only requires 300 pounds.)

Mixed, one part cement, two parts sand,

and broken in seven days—240 pounds per square inch.

(The Dock Department only require 125 pounds.)

Capt. W. W. Maclay, the engineer in charge of the Testing-Department of the Dock Department of this city, says:

"This cement is very finely ground and the tensile strength both neat and gauged with two parts standard sand at the end of seven days is high.

"The test is therefore a very satisfactory one, as the cement is very finely ground and perfectly reliable."

He also made a twenty-eight day test with the following result:

Tensile Strength. Mixed neat, 575 pounds per square inch.

Mixed, one part cement, two parts sand, 274 pounds per square inch.

Of this he says:

"The twenty-eight day test confirms the good opinion I gave about this cement, based upon the result of the seven day test.

"The tensile strength is very high both with sand and gauged neat, and taken in connection with the fineness and general satisfactory working, places this cement in the rank of the best Portland Cements in this market."

Do not fail to send for my pamphlet on Portland Cement.

For prices either for immediate delivery or "to arrive" write to

ERSKINE W. FISHER,
Wells Building, 18 Broadway, New York, N. Y.

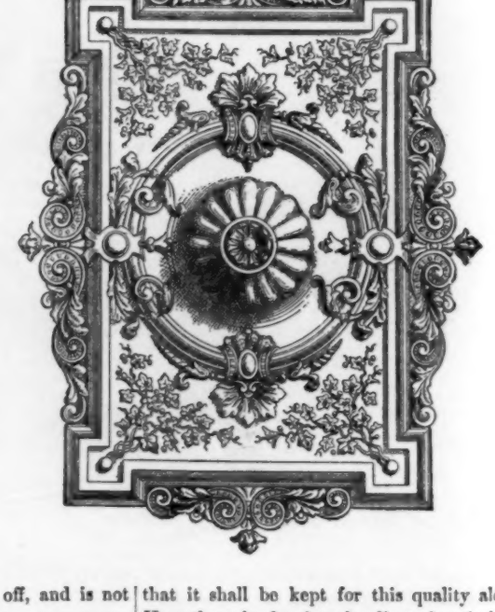
These centres are all finished before leaving the factory, and painted a lustreless white, to correspond with plaster-finish of ceiling, and are priced in this way. They can, however, be painted and ornamented to suit the taste of purchasers, and to correspond with style and decoration of room where used. These centres are simply screwed to the ceiling after plastering is put on, and can at any time be

taken down, cleaned, and replaced without damage to the ceiling or centre-piece.

We present, also, a few designs of sheet-metal interior cornices and ceilings, which we will be pleased to price on application, and which will be found far cheaper than work of corresponding style in any other material. Another, and probably the chief advantage of this class of work is its extreme light weight as compared with stucco, and the fact that it will not crack or fall off, and is not injured by water.

Correspondence solicited. Always state whether work is to be sent by express or freight.

BAKEWELL & MULLINS,
Salem, O.



SHEET-METAL AS INTERIOR DECORATION AND FINISH.

Sheet-metal work for ceiling decoration and finish has long been used in Europe, while in this country it has only recently been introduced, and it is, therefore, comparatively little known. As used for ceiling centre-pieces, it possesses great advantages over the heavier and more expensive stucco and cast work, which will at once recommend it to those in want of ornamentation of this character.

The principal advantage claimed for sheet-metal centre-pieces is the extremely low price at which they can be sold, beauty of finish, durability, lightness, the ease with which they can be put up, and the fact that they may be shipped without danger of breakage.

COALITION.

Pittsburgh, Pa., January 1, 1880.

The business of the Hartman Steel Works, at Beaver Falls, heretofore conducted by the Hartman Steel Company, Limited, has been transferred to Carnegie, Phipps & Co., Limited, by whom it will hereafter be controlled.

The works will hereafter be known as the Beaver Falls Mills, operated by Carnegie, Phipps & Co., Limited.

Hartman Steel Company, Limited, by J. G. A. Leishman, Chairman.

Carnegie, Phipps & Co., Limited, by Wm. L. Abbott, Chairman.

CALENDARS.

The makers of calendars, and those who use for an advertising placard these useful aids of daily commercial life as a species of side issue, seem to be divided between several classes. With every class the real object is the same—to impress on the memory of the beholder that So-and-So deals in such and such goods, at such an address.

One class seeks to achieve this end by the pyrotechnic method, attempting to make a single but lasting impression, following the methods of the theatre placard-maker in size, much color and audacious movement. This class is not nowadays a very large one.

With all the other classes there is a common leading idea—to secure the preservation of the calendar, or rather the advertisement, as long as possible, and the methods employed are various. With one class the inducement is to make the advertisement wholly subordinate to the calendar, and to make the calendar itself as useful as possible as to convenience of size, method of arrangement and legibility. The best specimen of this class that has come to us this year is the calendar issued by the Boston Lead Manufacturing Company.

The principle that guides the issue of another class of calendars is to make the article as intrinsically artistic as possible, so that it shall be kept for this quality alone. Here the calendar is subordinated entirely to the decorative treatment, and the advertisement is skilfully worked in with it on the face of the picture, or is relegated to the back of the sheet. The most attractive calendar of this type that has come to us this year is that issued by the Smith & Anthony Stove Company, of Boston, a calendar similar to the one issued by them last year. Two out of the six leaflets, in chromo-lithograph, are extremely satisfactory in treatment, and the others are on a par with other good commercial color-work. Another establishment, the Taunton Iron Works Company, of Boston, issue a similar calendar, smaller in size, with half the number of leaflets and more sketchy in the treatment of the decoration; but, still the

effect is good, and if some of the colors were not a little overbright would be very dainty.

The Magee Furnace Company, of Boston, follow a somewhat similar course, though here the decoration, the monthly calendar and the advertisement of the issuing firm have about equal prominence, and the decorations are steel-engravings and not colored prints.

With another class the advertisement is intended to be the thing of importance, and the advertisers send them out as they would send out similar placards at any other season of the year; the calendar attachment seems to be added as an after-thought, as sort of apology and concession to New Year's Day prejudices. At the head of this class, since the calendar is quite inconspicuous, we should place the expensive card issued by Messrs. Samuel H. French & Company, of Philadelphia, and in the same category the even more expensive one issued by Messrs. Merchant & Company of the same city, which, taking all things into consideration, is the most successful advertising placard we have received, though it is not the best calendar. The Gurney Hot-Water Heater Company, who come in the same class, are more successful in some ways than either of the two firms just mentioned; their calendar is for wall service, and the figures are large enough to be read a dozen feet away, while the tone of colors used and the style of letters and decoration makes one quite ready to keep it during the year.

The calendars issued by the Abram Cox Stove Company and of the Thorn Shingle & Ornament Company might almost be included in the class first mentioned — the pyrotechnic class, but they both have enough good points to warrant their being kept.

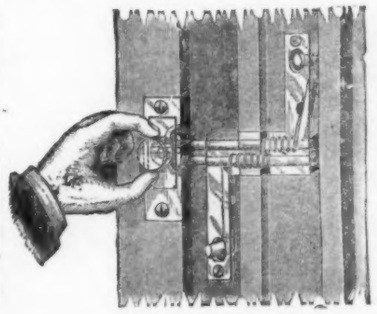
The ready-made calendar has come to be a regular visitor everywhere in a multitude of forms. It is less expensive, of course, to select a pattern from a stock of ready-made designs for backgrounds and use that rather than have one specially prepared, and it is about as satisfactory, for the multitude of these ready-made backgrounds is so great that one person is unlikely to receive calendars of the same design from two or more different advertisers. In this class we should place, at a guess, the calendars sent us by the B. C. Bibb Stove Company, of Baltimore; Messrs. Burditt & Williams, of Boston; the Lawrence Cement Company, of New York; Messrs. McKenney & Waterbury, of Boston, and Keeler & Company, of the same city. The backgrounds used by the last three mentioned being excellent specimens of steel-engraving done by the firm of J. A. Lowell & Company, of Boston.

The conclusions we draw from comparing the samples we have received — less than in former years — is that advertisers do not often enough try to put themselves in the position of the recipient. Of the many calendars that may come to a given person, he will probably keep two for use, one for the wall with figures large enough to be read from across the room, good in design of decoration and, above all, not glaring of color; the second will be kept for desk use, and must have all the attributes of the other, and be, moreover, of such size, shape and form as not to be too much in the way. All others will be thrown away in the course of a few days, and all the excess of money spent in their manufacture, over and above the cost of a single plain circular, is absolutely lost, and worse than lost, it is misspent, since by being paid for advertising in magazines, journals and newspapers, it would have assured the spender those benefits of constant iteration which is the essence of advertising.

IMPORTANT TO HOUSE-OWNERS.

AMONG the almost innumerable inventions of modern times, there is no subject that has so engrossed the mind of the American inventor as the subject of window-fastenings; and though hundreds of patents have been issued in this line to as many inventors during the last decade, a comparatively small number of these inventions, when reduced to practice, have met with anything like general approval. There is probably no article in the line of builders' hardware upon the market with so great a variety to select from, and none that meets with such universal disapproval, as the article known as "Centre" sash-fasteners, for the reason that, when applied, they afford neither protection nor convenience, and such a thing as security and ventilation at same time was never dreamed of.

Within the past few months, however, a new and unique device has been placed upon the market, known as the "Timby" burglar-proof sash-lock and ventilator. This mechanical device is quite novel, if compared to, or rather, contrasted with, the old style of window-fastenings. It is so simple in construction that the casual observer must wonder



that some mechanical genius did not long ago discover and apply it.

Even such as are but superficially posted in mechanism can comprehend the workings of this lock, and the most obtuse can acquire the art of manipulating it in one easy lesson. The very simplicity of its construction, the readiness of its adaptability to any window, and the ease with which it is operated, are features so apparent that to be immediately approved it needs only to be seen. One lock only is required for a window. It locks one sash or both sashes at the pleasure of the one controlling the thumb-nut, or operating device, securing them in any desired position whether the windows are perfectly closed, or are adjusted for purposes of ventilation. It is a means of absolute security against burglars and thieves, who, if their tracks are evidence, seldom, if ever, find difficulty in overcoming the protecting qualities of the old-fashioned samples of hardware attached to the meeting-rails of the sash, while the absence of complex mechanism in the construction of this lock is apparent.

The effective purposes for which it is designed, strength and durability, are assured in the superior quality of the material used in all component parts, which are of the very best malleable-iron, steel, brass, and bronze metal.

The device automatically secures the sashes, and the lock itself is applied in such a manner as to be proof against the possibility of yielding to any tampering by thieves or others from without. It would seem to commend itself to parents and others having small children under their charge, beyond whose control the opening or closing of windows may be desirable. In every direction claimed for it, it may safely be said that it is a perfect safeguard.

"Every man's house is his castle" is one of the best known maxims of the old English common law. As light and transparent and fragile as is the glass of the castle-windows, it seems strange that it is not the vulnerable part of the structure. It appears to serve as a wall as well as the brick and stone, and, if the sashes are securely locked, the window partakes of all the presumed invulnerability of a barred and bolted door. The accompanying illustration shows a section of window-frame with the lock applied. The thumb-nut is moved upward, releasing the upper sash, the cut being semi-transparent, to show the inner construction of the lock, actuating-spring, etc.

The bolts are made from the best malleable-iron, the case from wrought-steel, the face-plate and thumb-nuts from brass and bronze metal highly polished and lacquered, presenting a very handsome appearance when applied. Varying thickness of sash or inside strips does not in the least interfere with its application. It is equally well adapted to windows having sash adjusted with or without weights or balances, and does not obstruct the attachment of weather-strips or inside-blinds. The descriptive circular of the manufacturer gives full and explicit directions for applying and operating, and a diagram or pattern accompanying each lock, so that no difficulty will be experienced in attaching them to buildings already constructed. We quote from our contemporary, the *Manufacturer and Builder*, published in New York City: "There seems to be nothing about the construction or operation of this device to render it liable to become disarranged; it should be very durable, and must form a very desirable and substantial lock, affording much greater security and convenience than the centre-sash devices in common use. It seems to have much merit, and we commend it to our readers."

Letters patent of the United States were issued to the inventor, Mr. T. F. Timby, under date of March 29, 1887. Preparations for the manufacture of them were begun soon thereafter, and from the first day they were placed upon the market they met with deserved approval. The reputation gained at first remains with the lock, and as time rolls on, and its merits become more widely known, it must meet with that measure of practical application to its intended use as to defy all competition in the line of devices for window-sash fastenings.

At the fifty-seventh exhibition of the American Institute, held in the city of New York in the fall of 1888, this improved window-fastening was exhibited, and met with unqualified approval of thousands of persons who examined it, among whom were many leading architects and builders.

Besides the favorable comment of the public generally, and architects and practical house-builders particularly, more tangible approval followed in the form of numerous orders for the goods. We also see by the published lists of awards made by the American Institute for the year 1888, that the "Timby" burglar-proof sash lock and ventilator received the first prize over all competi-

tors, the award being the beautiful bronze medal of *excellence*.

This firm is also engaged in the manufacture of another new lock designed expressly for use in windows having a single sash. This lock combines all the desirable features of the double-sash lock, *viz.*, automatic action, adjustability, ventilating qualities, etc., but is constructed much heavier in all its parts, adapting it to the heaviest sash used in the more modern styles of expensive blocks and dwellings. Special attention will be given to furnishing these goods in any style and finish to order, or upon specifications to match other trimmings used upon blocks, dwellings, or public buildings.

Many of the leading architects of the cities of New York, Boston, Philadelphia, Washington, Pittsburgh, Cincinnati, Chicago, St. Paul, Minneapolis, Kansas City, and other points have examined and approved this lock. Agencies will be established, and the goods placed on sale in all the principal cities. Dealers in first-class builders' hardware not already supplied will be visited at an early date. The locks are graded in price, according to the quality and finish, and are numbered from 1 to 5, the difference in the several grades being apparent only in the style and finish of the face-plates and thumb-nuts, which are made in polished brass, nickel-plate, real bronze highly polished, oxidized-silver, etc.; also a special A A of rich gold metal, plain or figured pattern, very fine, with buyer's monogram engraved upon the face of the thumb-nut, to order. The inventor of this lock is Mr. T. F. Timby, of Brooklyn, N. Y., who has charge of the New York office. The factory is located at Oswego, N. Y. An office has recently been opened in the city of New York in the Aldrich Building, No. 102 Chambers Street, Room 8, where models exemplifying the practical workings of the lock may be inspected. There, also, the several parts of the device and samples of the finished locks can be seen, and all desired information will be given.

Samples mounted on a section of window-frame will be distributed to architects and builders throughout the city and vicinity, and will be forwarded to any part of the country upon application. Special attention will be given to export orders, as also to the manufacture of special designs to meet the requirements of architects or others to order.

This novel device will without doubt find a ready place upon the market, as it seems to meet a want not supplied by any of the sash-lock fastenings in the market; namely, security and ventilation — at the same time covering a field heretofore left vacant, which fact will be appreciated by house-owners.

JENKINS & TIMBY,
Oswego, N. Y.

THE S-TRAP AND THE McCLELLAN TRAP VENT.

In my contribution to the subject of trap seal protection, I called attention to the fact that Mr. Putnam's experiments demonstrated that an unused *vented* S-trap would lose its seal by evaporation in less than two weeks, and that an *unvented* S-trap unused would retain its seal for many months. Since all disinterested parties agree that the S-trap, with fair usage, will rarely or never foul, and that traps of all other forms *do* foul *in proportion to their departure from a uniform calibre*, the conclusion is inevitable that, if its seal can be preserved against siphonage and evaporation the S-trap is incomparably better than any other.

Your correspondent asserts that "no automatic air supply has ever been invented, nor probably ever will be, which will form a reliable protection against siphonage;" but admits that such form of air supply seems to him "*to be much more reliable in many ways than the ordinary back-vent pipe.*" (The italics are mine.)

The many tests made of the automatic vent [1] referred to by me in my former communication — in this city, under the direction of Dr. William K. Newton, Health Inspector, at the rooms of the New York Master Plumbers' Association, at the New York Trade-Schools, etc., fully established its reliability in preventing siphonage. Mr. Edward Murphy, Secretary of the New York Plumbers' Association of New York, says: "I am free to say that it fulfilled every claim made for it, notwithstanding the tests were made more severe, as regards siphoning, than are ever found in actual practice." In addition to this, I understand that, after careful testing by its experts, the New York Board of Health has repeatedly approved plans calling for its use to the exclusion of back-vent pipes.

The question as to the cost and complication is sufficiently answered by Mr. Murphy's further remark that "its advantage in reducing the cost of plumbing, in furnishing an adequate supply of fresh air, and its non-liability to get out of order are so patent that further comment would be useless."

My statement that "all so-called anti-siphon traps acquire their non-siphoning quality at the cost of cleanliness," and "have greatly enlarged cavities which gradually fill up with decomposing filth," is met by the assertion that "there are no '*greatly enlarged cavities*' in a scientifically designed anti-siphon trap."

My remarks were not directed against any special form of trap, but against an *unscientific method* of preventing loss of seal by siphonage. It is well-known to every competent expert that *no* unvented trap has ever been made that will maintain its seal against strong siphonic action unless its up-cast limb is greatly enlarged, and hence that any trap of uniform calibre must be provided with an air supply at or near its crown to prevent siphonage.

More certainly a one-and-one-half inch trap, with a cylindrical chamber of some three inches in diameter, and nearly five inches long, forming a part of its up-cast limb is no exception to the foregoing proposition. Nor do I think such a cavity with its sharp angles and extended surface will be found less likely to accumulate filth, with a given water flow, than similar enlargements in other traps.

The advantage to be gained by the use of large outlets to fixtures so as to secure the thorough scouring of the trap and waste-pipe is well-known, but shamefully neglected in practice. The statement about the filling up of an ordinary S-trap until its waterway was just large enough to carry the little stream its small-outlet fixture permitted, simply supports my position that all enlargements form convenient lodgments for filth, and that it is only a matter of time when they will so fill up as to leave a nearly uniform waterway through the trap.

The talk about back-pressure amounts to nothing, if reasonable skill is used in constructing the drainage system. If the openings of the fixtures are large enough to allow a proper flush to scour the trap and waste-pipe shreds of lint will not find lodgment in the trap, and without their presence loss of seal by capillary action will not occur.

The small quantity of water required to seal the S-trap, and the readiness with which it is scoured by a reasonable flush are not objections, but are among its greatest virtues; while the increased volume of water required to form the seal of a so-called non-siphoning trap decreases its scouring quality and tends to establish a miniature cesspool, increasing the evil, as its greater volume of water and its non-siphoning qualities increase.

The claim that in the case of a kitchen or butler's pantry sink trap grease is liable to spatter up into the mouth of the vent-pipe or vent-connection, and thus eventually close it up, is true only when the vent-connection is placed directly over the up-cast limb of the trap. This should be avoided by placing the connection *beyond the crown of the trap*, but sufficiently near to it to prevent siphonic action.

Finally, this discussion plainly points to the following conclusions, viz:

1. That the ordinary S-trap is the simplest and most cleanly ever devised.

2. That to prevent siphonage with absolute certainty, an air-supply must be provided to the waste-pipe at or near the crown of the trap sufficient to meet all demands without disturbing the seal of the trap.

3. That while back-vent pipes, when short and direct, furnish air-supply adequate to prevent siphonage, they fail in this respect when the lines are indirect or very long; besides, the air currents they maintain rapidly destroy by evaporation the seals of unused traps.

4. That the back-venting of traps to the roof is costly, complicated and dangerous.

5. That an automatic air-supply directly from the room at the point needed is the only uniformly reliable method of preventing siphonage in all situations.—*M. Houman, in the Sanitary News.*

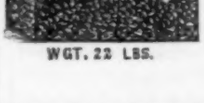
[1] McClellan Anti-siphon Trap-vent made by the Dubois Manufacturing Co., 245 9th Avenue, New York.

NOTES.

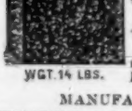
The Lidgerwood Manufacturing Company, New York, have just issued their new catalogue for 1889. It is a credit to this enterprising concern. The book contains fully a hundred excellently executed engravings of their superior hoisting machinery, boilers, etc., and will be forwarded to those making application.

The Whittier Machine Company have recently put into the Commonwealth Hotel, Boston, three horizontal steel boilers. They have constructed for the Fall River Bleachery, Fall River, Mass., four horizontal steel boilers, each six feet in diameter. Also, have recently put in for Mr. M. Brennan, at the corner of Eighty-fourth Street and Ninth Avenue, New York City, two hydraulic elevators for passenger service.

ASPHALT PAVING BLOCKS AND TILES



WGT. 22 LBS.



WGT. 14 LBS.

For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

Materials.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY

THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.
THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.
THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidad Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamber of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.

The American Architect and Building News

ADVERTISERS' TRADE SUPPLEMENT.

No. 81. SATURDAY, MARCH 2, 1889. Volume XXV. No. 688.

THE GURNEY HOT-WATER HEATER.

Below we append cut of the one hundred series of the Gurney Improved Hot-Water Heater, which is the production of years of study and practical experience, combined

with theories advanced by the most prominent heating engineers in this country and Canada.

The Gurney Hot-Water Heater Company are undoubtedly the pioneers of hot-water heating in this country, and have at all times had uppermost in their minds the ambition to perfection, and for the public good. To be outdone by none, and thus always hold the lead. And to the eye of the practical engineer we think this article and cuts will commend themselves.

In beauty of form, durability of construction, compactness, extent and quality of surface, cheapness, and economy, they have obtained the best results ever secured, and they challenge examination and comment by the engineering talent of the world.

The main considerations to be regarded in a Hot-Water Heater are how to arrange the heating surfaces to obtain the best results and this can only be determined by continued experiments, and the Gurney Hot-Water Heater Company having made in the past several years series of practical experiments, are led to lay down the following essentials for the construction of a satisfactory Hot-Water Heater:

1. The whole arrangement must be such that the least possible resistance is offered to free circulation.

2. The area of heating-surface must be made to approach, so far as practicable, a maximum.

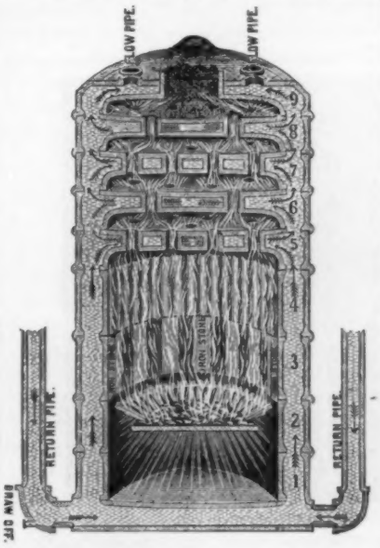
3. The arrangement of the heating surface must be such that,

(*a*) A maximum of the heat of the burning fuel is utilized.

(*b*) The convection currents shall not impede each other, or coalesce to the formation of eddies.

How far we have met these essentials of a good heater in the construction of our one hundred series of Heaters will be best understood by referring to the accompanying cuts.

To meet the first essential, we have constructed the heater so that the inlet and exit ports are open from the line of the floor to the top of the heater, as well as around the entire circumference of the cross-sections. All sharp angles and other obstructions to general circulation have been avoided. The second essential is secured by the introduction, in series, of a number of sections, pierced with flues, through which the heated products of combustion require to pass before entering the chimney. The area of heating-surface is thus greatly extended, and essential three (*a*) met at the same time, since the heated gases (products of combustion) part with their heat as they ascend through the different sections. The essential three (*b*) we have sought to



meet by giving the sections a peculiar shape. The upper and lower plates of each section incline from the ports inwards, giving the outgoing and incoming currents such direction as (in our belief) will most effectually prevent the formation of eddies, and in general, produce currents which may accommodate themselves with the least resistance to the direction of the main currents in the outer jacket.

The Gurney Hot-Water Heater is especially designed and adapted for hot-water heating. It is easy to erect, most economical of fuel, simple to manage, presents the largest heating-surface to the fire, is moderate in cost, and we offer them to our patrons fully guaranteed.

To correspondents living at a distance we would recommend a conference with local fitters with a view of obtaining estimates of fitting, and they would be glad to furnish plans which, if adhered to, will result in giving a thoroughly reliable heating apparatus. Correspondents, when soliciting estimates of work, will have the kindness to be as explicit and definite as possible as to the size of the building to be warmed, its glass surface, construction, location, points of compass, exposure, and conditions generally. A sketch of the building, with its size and height of ceiling, will facilitate matters and enable them to form a correct idea as to size of apparatus needed.

GURNEY HOT-WATER HEATER COMPANY,
Boston, Mass.

ASPINALL'S ENAMELS.

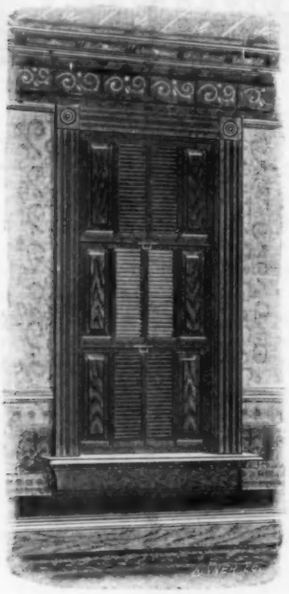
For years past many scientific men have endeavored to produce an enamel, that will stand boiling-water, something especially adapted to renovating baths, that have become unsightly, and the success which has crowned the efforts of Aspinall & Co., England, in the production of their various enamels has been hailed with delight by the civilized world. This product is the only real enamel which does stand boiling-water and is made by a secret process known only to themselves. It is not a *paint*, but is applied as easily and readily as any mixed paint, to iron, tin, wood, or any other substance, however open or porous, and its uses are so manifold as to make it impossible to enumerate them. Old bath-tubs, baskets, tables, chairs, hot-water cans, brackets, bedsteads, etc., can be easily and quickly rejuvenated or decorated with any color desired, over a hundred different colors or shades being manufactured from chalk white to deepest brown and black. For prices, list of colors, testimonials and further information apply to,

E. ASPINALL,
Sole agent for the United States,
98 and 100 Beekman Street, New York, N. Y.

The Whittier Machine Company have recently constructed for Messrs. Tiffany & Company, Union Square, New York, one hydraulic passenger elevator operated by their Pressure Tank System.

THE "WILLER" SLIDING-BLINDS.

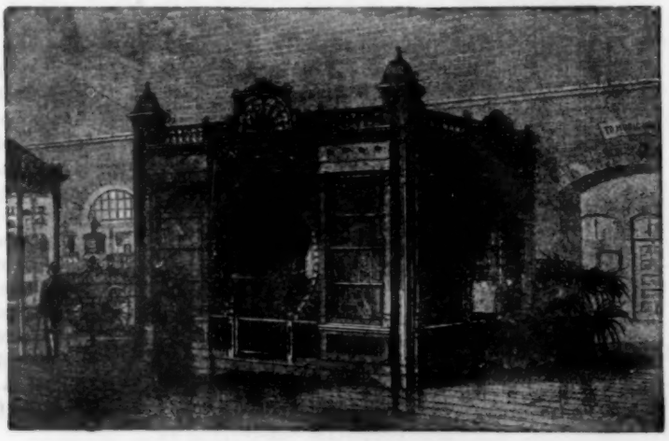
The "Willer" sliding-blinds have been in the market but a few years, but in that short period they have become so generally known amongst architects, builders, and the building public in general that a detailed description of them is here unnecessary. The catalogue shows some twenty different classes, or twenty distinctly different ways of arranging these blinds in the windows. For illustration we select Class E, this class being universally used for buildings of medium cost,



on account of its simple construction and moderate price. This class consists of three separate sections of blinds, covering the entire window, and running in a guideway containing three grooves, one for each section of blind, all within the space of the window-opening, no pockets being employed at either the bottom or top of the window.

The other classes in the catalogue show windows fitted with blinds of two, four and six sections, without pockets, and with pockets at either the bottom, top, or both ends of the window.

The "Willer" blinds have rolling slats of a new construction throughout all sections, or



in as many divisions of the blinds as may be desired; the springs are of the latest pattern, and the only springs adapted to hold the blinds in place. The blinds are handsomely trimmed with full sets of hardware, finger-plates, drop-handles and lifts, in Berlin or genuine bronze. Each set of blinds is finished complete, varnished, rubbed, and polished as desired, and when fitted to the window is ready for use.

The "Willer" blinds, on account of their superior quality and merit, and their adaptability to windows of every description, have

been selected in preference to all others, and accorded the first rank in all parts of the country. They are now being placed in the residence of the widow of the late Emil Schandein, Vice-President of the Philip Best Brewing Company of Milwaukee, erected at a cost of over $300,000. Mr. Schandein had examined all forms of inside-blinds, and had given these the preference over all others.

A public school-house in Denver, Col., has

lately been fitted with these blinds, the total order for the purpose amounting to nearly $6,000.

As a further proof of the superior quality of these blinds over all others, the firm has been awarded the bronze medal at the late Centennial Exposition, held in Cincinnati, July to November, 1888. This bronze medal is the *highest* and the *only* award made to any exhibitor of sliding-blinds, and, although there were others on exhibition, none of these have received any award, diploma, or medal whatever. In their report, the jury said: "awarded on account of excellent workmanship," etc. We print herewith an illustration of the Willer exhibit at the above Exposition, taken from a photograph; also a fac-simile of the medal.

We employ a force of one hundred and fifty men, of whom one hundred and ten are employed exclusively in the manufacture of these blinds. The sales of these blinds for 1888 amount to over $100,000. The blinds are in use in all parts of the country from Maine to California, and Manitoba to Texas. Over $10,000 worth have been sold in Canada alone.

We will send our No. 8 Catalogue of 1888, free of charge, to any architect or builder, etc., upon application. Our new catalogue of 1889–1890 will be issued about May, 1889, and will be the most artistic and complete catalogue of its kind in the country.

We also make a specialty of fine stair-work, of which line a separate catalogue will be issued in the spring.

The firm is represented at present by nearly three hundred sales-agents in all parts of the country. Agents are wanted everywhere, and applications for agency will be considered from parts not yet represented.

Further particulars may be had by addressing the firm,

WILLIAM WILLER,
Fourth and Cedar Streets, Milwaukee, Wis.

THE SPRINGFIELD GAS-MACHINE.

The Springfield Gas-Machine has been perfected by an experience of over twenty years. As it has from the first been made of the most durable material and most perfect workmanship, no doubt there are more of these machines in actual operation to-day than of all others combined. Thousands of other machines, which have been made of inferior material, are now out of use, because they have been destroyed by corrosion, often within three or four years after being set up.

Our air-pumps are constructed entirely of copper. Our gas-generators are of heavy galvanized-iron, with every seam not only riveted like a steam-boiler, but massed in solder, so that the cut edges of the iron and the exposed ends of the rivets are completely plated with that metal. They are then covered with boiling tar in several coats. They are divided into shallow evaporating-pans, furnishing by this means, and by abundant absorbent material, larger evaporating surface in square feet than any other gas-generator made.

We confidently assert that this is the largest, most durable, simple and efficient gas-machine in the world.

The gas made by these machines is usually know as Carbureted Air Gas, being common air impregnated with the carbonaceous vapors of gasolene. It burns with a rich, bright flame, fully equal to coal-gas, and it is conducted through pipes and ornamental fixtures with the same convenience and safety.

The gas is really analogous to coal-gas in its general features — the one being a carbureted air gas, the other a carbureted-hydrogen gas. They are both governed by the same general laws; the particles of each exist in a state of mutual repellancy; if permitted to escape, they alike permeate all the surrounding atmosphere, and are detected with equal readiness by their odor. Air gas possesses an illuminating power of from twenty to thirty candles, equal to the best coal-gas, and much superior to that ordinarily supplied by city gas-companies. It is a remarkably pure gas; contains no sulphurous compounds or impurities of any kind; with proper burners, combustion is perfect, without smoke or odor.

Gasolene, the fluid used in making gas by our apparatus, is a light, volatile product of petroleum, analogous to kerosene; chemically considered, it is almost a pure carbon; it is produced in large quantities in the distillation of petroleum, and is a common article of merchandise, readily obtained from almost all refiners or dealers in oils. The supply yearly increases, more than keeping pace with the demand, and is necessarily as inexhaustible as the supply of petroleum.

The Springfield Gas-Machine consists of a gas-generator—a cylinder containing evaporating-pans or chambers—and an automatic air-forcing apparatus.

When the machine is in operation the pump forces a current of air through the gas-generator; here it becomes carbureted, thus forming an illuminating gas that is returned through the gas-pipe to the house, and carried by the distributing pipes in the walls and floors of the building to the burners, or it may be conducted from the gas-generator to other houses in any other direction—to stables, out-buildings, or to lamps on the grounds, wherever light is required. This plan of gas-making is automatic. Gas is generated only as fast and in such quantities as required for immediate consumption. The process is continuous while the burners are in use, but instantly stops when the lights are extinguished. The Springfield Machine, set in this manner, is considered as safe a means of lighting as any that can be adopted; all the gasoline is kept in an air-tight vessel under ground, and removed from the building a safe distance. There is no gas in the air-pump, nor inflammable material in the building, except the gas contained in the distributing pipes.

No fire is used in the process of manufacture buildings lighted by the gas are insured at the same rates as though coal gas were used.

We have now several thousand machines in use in every part of the country, lighting all classes of buildings, and in no case has a building been burned.

The cost of the gas depends upon the price of gasolene; this varies from fifteen to twenty cents per gallon. Taking this as a basis, the cost per thousand feet is from eighty cents to a dollar, six gallons being a liberal estimate of the amount of fluid required to produce light equal to that from a thousand feet of ordinary coal-gas.

The economy of lighting by gasolene gas has induced many large consumers of coal-gas to adopt our machine, and with the most gratifying results, the cost of the apparatus being quickly saved in the lessened gas bills.

Air gas is cheaper fuel than coal or wood for cooking and laundry purposes. Send for our illustrated catalogue of gas ovens, ranges, griddles, grills and broilers, laundry-iron heaters, coffee-roasters, instantaneous water-heaters and open fireplace heaters.

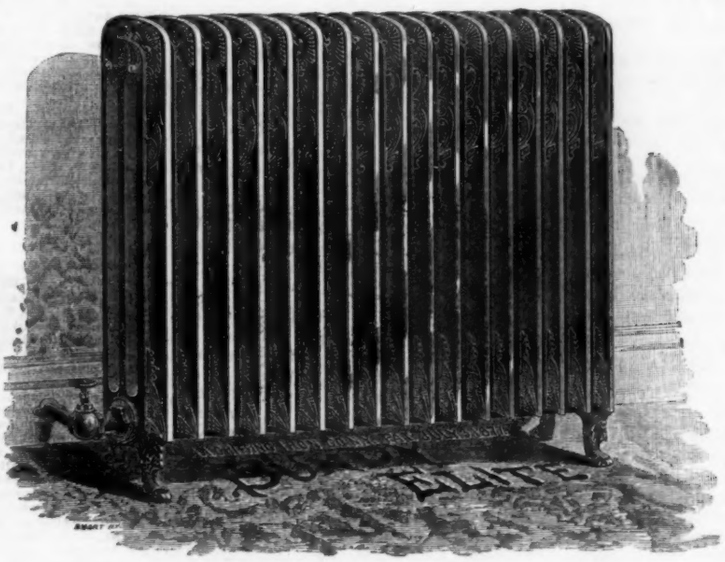
One of the most interesting uses to which gas may be put in promoting domestic comfort is undoubtedly that in connection with the preparation of food. It is a matter of surprise that it has not been much more extensively adopted by the general public. Its use for these purposes is of special interest to those having gas-machines, because of the great economy of air gas. The first cost of gas ranges is not half that of good coal ranges, while they will last a lifetime. The exact degree of heat required for any special purpose is at once obtained. Since combustion is perfect, there is no smoke or odor, and no flue is required. On the score of economy, it will be at once acknowledged, after trial, that the cost of a coal fire doing the same amount of work is greater than the cost of gas, while the certainty of its results, its cleanliness, convenience and comfort, are obviously in favor of the latter fuel. Any coal stove may be fitted with a burner suitable for burning air gas, without smoke or odor.

Ordinary open coal grates furnished with a suitable burner, and filled with ragged bits of lava, which, when the gas is lighted, become incandescent, perfectly counterfeit a coal fire, and furnish an economical and abundant heat.

Air gas is used as fuel in the mechanical arts for heating light forgings; melting gold, silver, brass, glass, etc., soldering, brazing, bluing; in canneries, and by manufacturers of hollow ware. We invite correspondence on this branch of the subject, and will mail our circular, with numerous references, upon application.

GILBERT & BARKER M'F'G. CO.,
75 MAIDEN LANE, NEW YORK, N. Y.

A RADIATOR WITH ARABESQUE DESIGN.



OUR illustration shows the Bundy "Elite" Radiator which has the most beautiful design that has ever been applied to a radiator.

It is of Moorish origin and consists of only lines, curves and angles as the superstitious Moors thought it an unpardonable offence to fashion any artifical object like anything having life. The Koran taught them that the imitated object would immediately die and bring down upon the offender the curse of their God. In this the over-careful Moors were certainly foolish, but at the same time, a study of their architecture shows their skill in designing works of rare beauty.

It is especially appropriate in ironwork where any attempt to imitate life seems out of place, inappropriate and in time, absolutely unbearable.

For this reason the Elite Radiator, which has the Arabesque design in its purest type, is the most beautiful that has ever been applied to a radiator. The appearance of the radiator is such that no one ever grows tired of it and it can be decorated in a multitude of ways to suit the surrounding draperies, etc.

Also, unlike all other sectional radiators made, this has a sectional base with its accompanying advantages, and this is why all prominent architects, with rare exceptions, specify the Bundy Elite Radiator, because they find that they can use from ten to forty per cent less radiation than with any other.

Steam-fitters are also cognizant of this fact and when the matter is left with them for decision as to which radiator to use, and they intend to conscientiously serve the best interests of their clients, they will use none other.

It also possesses a great advantage over all other radiators from the fact that the surface consists principally of arcs of a parabolic curve, and so all parts of the radiator are constantly surrounded by freely circulating air. Again, all sections are duplicates; legs are detachable and can be placed under any section and if desirable sections can be added to, or taken from, the radiator increasing or diminishing its heating powers at will.

Much more might be said regarding this excellent radiator, but it will suffice to say that we will gladly send our catalogue, which is a veritable encyclopedia on heating, to any one who may request it.

THE A. A. GRIFFING IRON CO.,
782 COMMUNIPAW AVENUE,
JERSEY CITY, N. J.

FIREPROOF BUILDING MATERIALS.

THE practicability and efficiency of Hollow Burnt Clay Blocks and Tiles and Porous Terra-Cotta Material in the construction and protection of buildings against loss by fire, has been fully and satisfactorily demonstrated, and the security it offers is so palpable, that the best informed architects and builders in the country recommend its use in all structures where life and property is jeopardized.

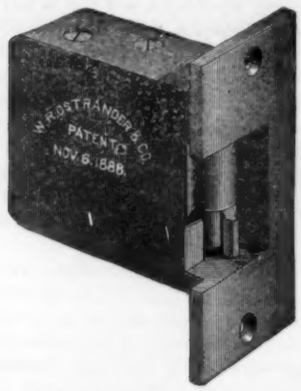
Since this important feature in buildings has become an established fact—the demand for "Hollow Brick" has increased largely, so much so that within the past year we have been obliged to greatly exceed our former capacity in order to meet the requirements of this important branch of industry. Our works are now the most extensive of the kind in the country.

The advantages we possess for procuring and handling the raw material are unsurpassed, having our own clay beds easy of access within a few feet of our works—situated on the Sound at Maurer's, near Perth Amboy and Woodbridge, N. J., with railroad switches alongside, an extensive water-frontage, and large dock-room, which gives us every facility necessary for shipments to all points reached by rail or water. We are prepared to furnish estimates and execute promptly all contracts intrusted to our care Correspondence solicited and any information

furnished on application. A new descriptive and illustrated catalogue of especial value to architects and those contemplating building, now ready and will be mailed free by addressing,

HENRY MAURER & SON,
420 East 23d Street, New York City, N. Y.

THE OSTRANDER DOOR-OPENER.



The Ostrander Door-Opener is simple and compact in construction, positive in operation, and withstands wind pressure or other force, and cannot be jarred open.

The movable bolt is a steel drop forging, and the other parts are of the best wrought-iron and steel. Nothing has been spared in its construction, as our aim is to make this *the* Door-Opener.

These have been thoroughly tested and in practical operation since patent was applied for.

The movement is a gravity one and it is devoid of any delicate springs or delicate mechanism.

The movement is protected by metal sides to prevent dirt, plaster and chips from interfering with its operation.

This Door-Opener is operated by compressed air (Pneumatic) or by electricity with batteries; and orders must state which method is to be used to operate the Door-Opener, and also state if for right-hand or left-hand doors.

W. R. OSTRANDER & CO.,
21, 23 & 25 Ann Street, New York, N. Y.

THE NEW SASH-CORD FASTENER.

The success of house-building and the satisfaction of living in it, when built, depends, very largely, upon the little and unseen contrivances which perfect the working and use of the details. This is no more apparent than in the hanging of the window-sash, which too often, is done in such a slip-shod and careless manner as to call forth the imprecation of all who have to do with them. Especially if the sash has to be removed from the frame for cleaning or other purposes.

The Empire Portable Forge Company of Cohoes, N. J., realizing, from actual experience in building, this deficiency, have put on the market a new sash-cord fastener (see advertisement in another column) which is designed to do away entirely with the difficulties to a cheap and effective way. The illustration herewith shows the old method of hanging sash and the new, viz: —

The sharp rib extending over the top of the fastener, through the centre, is by the weight of the sash caused to sink into the frame and thus held from moving.

Reasons why you should use them:

It costs less than one-and-one-half cents per sash. Requires no nails or screws. Can be put in or taken out in less than one minute. Prevents the knot from fraying out and getting between the sash and frame. Does not split the sash like nails or screws. Prevents the cord from running back into the weight pocket. The most useful invention for window sash ever put on the market. Every window requires them.

The Empire Sash-Cord Fastener is the most useful little thing ever offered for easily attaching cords to the sash — costing a mere trifle — at same time saving much time and patience in hanging the sash and preventing damage to it by the use of nails or screws through the knot, as in the old method, and wearing and binding of the sash and frame by the knot fraying out and becoming jammed between them.

It also prevents losing the cord in the weight-pocket by running backward, and when the sash is to be removed for cleaning or glazing, it can be done so easily and so easily replaced that any man building a house will have them, and the work will be much more satisfactory.

The Empire Forge Company call the attention of architects, especially, to this little device and urge them to include the sash-cord fastener in their specifications. We will be glad to send a sample of it with cord attached to a block, showing both the old and new methods, on receipt of a postal-card request.

Investigation of this little device, will show it to be a very useful one and destined to have a large sale.

EMPIRE PORTABLE FORGE COMPANY,
Cohoes, N. Y.

NOTES.

The Whittier Machine Company have recently put into the Adams Building on Court Street, this city, two hydraulic passenger elevators, each operated by their Pressure Tank System. Also have constructed for Messrs. R. & O. Goelet for the building corner of Lexington Avenue and 41st Street, New York, a steam elevator for freight and passenger service.

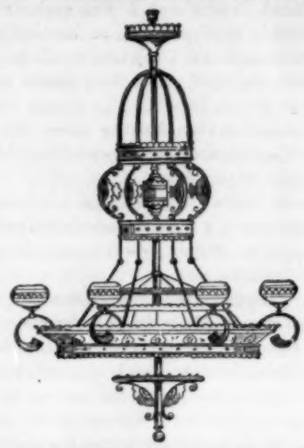
They have recently constructed for Dr. John Walters, No. 1010 F Street, N. W., Washington, D. C., two upright steel boilers, each two and a half feet in diameter.

We understand that the Henry-Bonnard Bronze Co., New York, have contracted to cast in bronze the following statues, on which they are now engaged.

Statue of Dr. Gallaudet, for Washington, by D. C. French, sculptor, N. Y. Statue of General Stannard, for Gettysburg, by Karl Gerhardt, sculptor. Statues of soldier and sailor, for monument at Newport, R. I., by W. Clarke Noble, sculptor. Statue of Governor Hubbard, for Hartford, by Karl Gerhardt, sculptor. Statue of soldier called "Appamatox," for Alexandria, Va., by C. Buberl, sculptor. Two soldiers for Gettysburg, for Frederick & Field, Quincy, Mass., S. J. O'Kelley, sculptor. Statue of Theodore Parker, for Boston, by Robert Kraus, sculptor. They are also casting the bronze rail for the United States Trust Co., Wall Street, R. W. Gibson, architect.

Mr. I. P. Frink of 551 Pearl Street, New York, of patent reflector fame, whose reflectors are extensively used with gas, oil, electric, and day light, has orders now on hand covering a great variety of buildings; among which are, Eliot Street Congregational Church, Newton, Mass.; St. George's Church, Astoria, N. Y.; Baptist Church, Bristol, Conn.; Tabernacle Baptist Church, Brooklyn, N. Y.; Centenary M. E. Church, Jacksonville, Ill.; Pilgrim Congregational Church, Duluth, Minn.; Garland Street M. E. Church, Flint, Mich.; Free Reformed Church, Jersey City, N. J.; First Presbyterian Church, Englewood, N. J.; Cumberland Presbyterian Church, Murfreesboro, Tenn.; The Court-House at Las Animas, Colo.; The Town Hall at Wickford, R. I.; The Assembly Rooms of the School Buildings at Mechanicsville, N. Y., and Galveston, Texas.; The Art Galleries of David C. Lyall, Brooklyn, N. Y.; W. H. Hogencamp, Patterson, N. J.; Chatelet Club, Newark, N. J.; Opera House, Wilkes-Barre, Penn., and Paris, Mo.; Retail Carpet Department, Arnold, Constable & Co., New York, and Heath & Drake, Newark, N. J.

FRINK'S Reflectors



Are used with oil, gas, electric or day light. Strongly endorsed by the leading Architects, and are in use in most of the prominent Churches, Theatres, Art Galleries and Public Buildings in this country.

Among the prominent buildings lighted by Mr. Frink within the past few months are the following: —

ART GALLERIES.

Mrs. R. L. Stuart, 871 5th Ave., New York.
Eden Musee Co., 55 West 23d St., New York.
L. A. Lanthier, 22 E. 16th St., New York.
Fifth Avenue Art Galleries, 366 5th Ave.
Century Club, 109 E. 15th St.
Fifth Ave. Auction Rooms, 240 Fifth Ave.
Boussod, Valadon & Co., 303 Fifth Ave.
G. W. Lininger, Omaha, Neb.
David C. Lyall, Brooklyn, N. Y.

THEATRES.

Miner's Newark Theatre, Newark, N. J.
Commonwealth Hall, Orange, N. J.
Titusville Opera House, Titusville, Pa.
Academy of Music, Petersburg, Va.
Opera House, Helena, Ark.
Perking Opera House, Springfield, Mo.
Opera House, Wilkes-Barre, Penn.
Anniston, Ala.
Carbondale, Penn.
Paris, Mo.
Los Angeles, Cal.

The American Architect and Building News

ADVERTISERS' TRADE SUPPLEMENT.

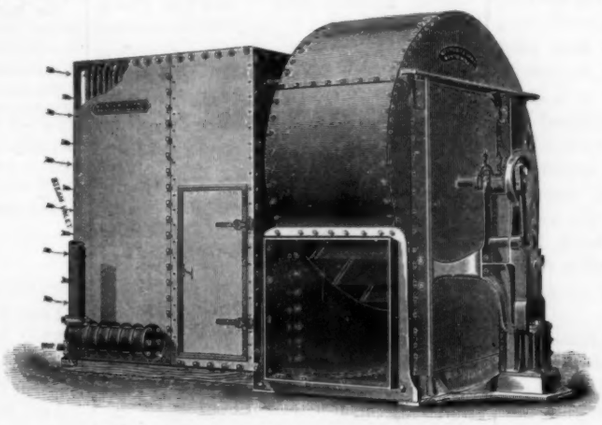
No. 82. SATURDAY, APRIL 6, 1889. Volume XXV No. 695.

THE STURTEVANT SYSTEM OF HEATING AND VENTILATING.

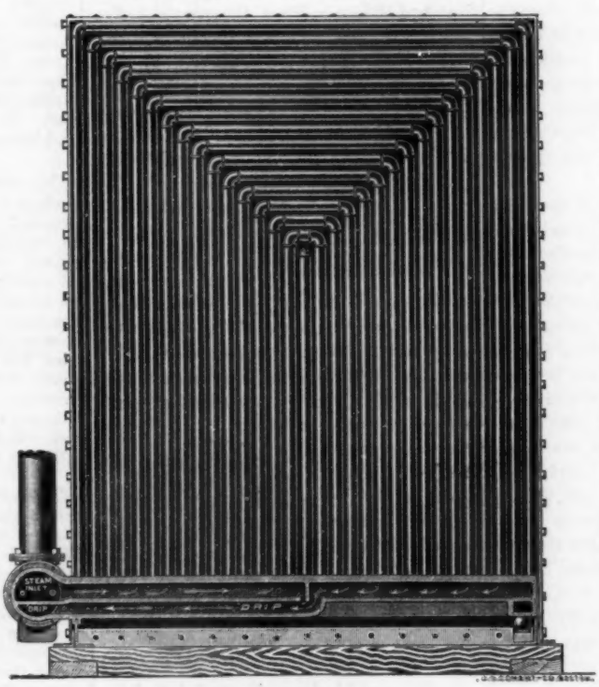
The necessity of mechanical ventilation in all cases where positive action is required is becoming more and more keenly felt every day. Particularly in this vicinity, has the discussion of the new Suffolk County Court-House and the condition of our public school-buildings brought the subject into prominence.

The only accepted and economic means of mechanically ventilating is the fan. If, in conjunction with the fan and ventilating system, the heating system can also be operated, there is not only a marked saving in expense, but a combined system is formed which heats and ventilates with the maximum of efficiency. It has been the common practice among many architects and contractors to purchase the fan of one party, the heater of another, the engine of another, and so on. To meet the requirements, and, at the same time, reduce the cost to a minimum, this house has for years manufactured what is known as the Sturtevant Steam Hot-Blast Apparatus. This line of manufacture was started nearly a quarter of a century ago, and since that time over five thousand of these apparatuses have been sold. They are now to be found in use in buildings of all classes, from the machine-shop and foundry to the largest and finest public buildings, theatres, etc.

Radical changes have very recently been made in the entire apparatus, and it is now presented in the improved form, as shown in the accompanying cuts. The small cut represents the apparatus complete. It consists in its several parts of a steel pipe steam-heater (shown in larger scale herewith), a fan, and an engine. The heater is constructed upon a series of cast-iron sectional bases, into which are screwed vertical rows of steel pipe, connected at the top by cross-pipes. The course of the steam is clearly shown, the steam inlet and drips being in the same header connecting with the series of sections. The fan is specially designed for handling large volumes of air at a minimum expenditure of power. It is lightly but strongly built of steel plate, and stiffly braced. The engine is of the best type, embodying the results of years of experience in fan-propulsion, and is capable of continuous running at high speed. When desired, the fan may be driven by belt from an independent engine.



The Sturtevant Improved Steam Hot-Blast Apparatus.



Section through Heater.

The outlet of the fan may be connected with a duct communicating with the branches or flues to the various rooms. The admission of warm air to these rooms is regulated by registers or by dampers in the flues. The peculiar advantages of this system consist in the much reduced amount of heating-surface required, the positive and absolute ventilation and heating of the apartments, the removal of all the steam-pipes from the rooms, and the placing of the control of the entire system in the hands of a single person.

It is adaptable to all classes of buildings, and this house is prepared to put in complete ventilating and heating plants, comprising boilers, engine, heating and ventilating apparatus, return-water apparatus, flues, registers, etc. A very complete and comprehensive description of this system is contained in a large eighty-page, illustrated "*Treatise on Ventilation and Heating*" issued by this house. A copy will be mailed upon application.

B. F. STURTEVANT,
BOSTON, MASS.

RUBBER GOODS.

The New York Belting and Packing Company, New York, enjoy the reputation of making the finest mechanical rubber goods in the world, and also the rare faculty of knowing just how to let the public become aware of it, through liberal and judicious advertising and capable, energetic representatives. Their latest lucky stroke is in having secured as their Southeastern agents the Atlanta Rubber Company, of Atlanta, Ga., who conduct the only jobbing business in rubber goods in the entire Southeast. This firm will carry at Atlanta a very large stock and complete assortment of the New York Belting and Packing Company's vulcanized rubber goods, from which orders can be filled without an hour's delay — a fact of interest to every one who handles or sells mechanical rubber goods in the Southeast. During their existence of some six years they have built up an excellent name for square-dealing, careful and prompt attention to orders and business courtesy. The New York Belting and

Packing Company is to be congratulated in securing their services, as the New South is fast developing its manufactures, and will constantly demand more and better supplies of this kind, and no one is in a better position to advance their interests in this territory, than these new agents.

NEW YORK BELTING AND PACKING CO.
15 Park Row, New York.

TIMBY'S LATEST AUTOMATIC LOCK.

FOR SINGLE-SASH WINDOWS AND DUMB-WAITER DOORS.

In response to numerous calls from architects and builders, as well as private individuals that contemplate erecting dwellings or business blocks during the coming season whose plansand specifications call for single-sash windows, this lock has been specially designed and placed upon the market..

There are many reasons why the heavy oak or other hard-wood single sash, are being substituted for soft-wood double sash for windows in many of the costly blocks, and residences now in process of construction in different parts of the country. Everything considered the single sash makes a very handsome and desirable window and the number used is rapidly increasing. But the question of a suitable locking device for such sash has been a puzzler. From amongst all the "centre sash fasts" in the market, and their name is legion, not one can be selected that can be applied to a single-sash window, or a lifting dumb-waiter door. It must be admitted that it is just as essential that a window should be locked, as that a door should be, and while it is important that the lock used should be strong, and substantial, it is of the highest importance that it should be automatic in its action, locking the sash securely when closed, and just as securely when open for ventilation, or other purposes.

The "Timby" Single Sash Automatic Lock, accomplishes all that can be desired in this direction.

It is a mortise lock, entirely novel in construction, extremely simple in all its parts, applicable to any window, perfectly automatic in its action and when set in the stile of the frame, and the sash adjusted in position, all that remains in sight is the operating device upon the face of the inside stop bead.

The accompanying illustration represents a section of window frame with the lock applied to the left-hand stile.

The positive automatic action of the bolt, makes it simply impossible to raise a sash from the outside two or four inches, when the same has been left slightly open by the carelessness of servants, or others or for purposes of ventilation. If by the accumulation of ice or snow under a sash it cannot be perfectly closed, and the bolt does not enter the socket in the sash, should a person from without attempt to raise it, the bolt would automatically enter the next socket, and prevent the possibility of raising the sash farther.

The sockets in the edge of the sash are provided with heavy metal plates, or bearings, secured in proper position at different points by screws. The heavy bolt of the lock is projected automatically into the same, thus locking the sash at different points of adjustment.

Particular attention is invited to the great strength of all the component parts of this lock. Its wonderful simplicity, and ready adjustability to any window, the bolt being of sufficient strength to withstand more than a thousand pounds pressure. The mechanism of the operating device is novel in the extreme; externally, the appearance is simply that of a thumb-nut, resting upon a plate beneath.

Suspended from the extreme inner top of the thumb-nut is an adjustable lever extending downward within the walls of the nut, and far enough below the plane of the face-plate to admit of an adjustable connection with the extended arm of the lock proper. The rocking, or semi-rotary motion of the bolt arm, sufficient to withdraw the bolt from the socket, and thereby release the sash is produced by sliding the thumb-nut downward, which, having a leverage of nearly two inches, the greatest possible ease of operation is assured. This new lock is a recent invention of Mr. T. F. Timby of Brooklyn, N. Y., but it is a separate and distinct invention from the burglar-proof sash-lock and ventilator.

Three different sizes of this new lock is manufactured. No. 1, being for the heaviest hard-wood single sash. No. 2, for medium weight. No. 3, for dumb-waiter doors and ordinary single or double sash windows.

Descriptive circulars and price list of this new lock may be had by addressing the manufacturer,

I. G. JENKINS,
Oswego, New York,
or T. F. Timby, manager of the New York City Office, 102 Chambers Street, New York City.

ELECTRIC TIME SYSTEM FOR PUBLIC BUILDINGS.

Architects are without doubt aware of the growing demand for a good system of Electric Time for Public Buildings and Factories.

The "Warner" system, supplied by the Standard Electric Time Company, of New Haven, Conn., meets this demand in a most satisfactory manner and has attained an enviable reputation for good and reliable service wherever it has been used.

In this system a switch-board is used by means of which the secondary or electric clocks are all controlled from a central point, whether the circuit is confined to one building or extends to all parts of a large manufacturing establishment covering acres of ground. The switch-board shown in the cut is of the pattern used when the system is run from a tower clock, as is often done. It contains an electric gauge of simple construction which shows the condition of the battery at a glance and a small indicator clock which always shows the condition of the secondary clocks throughout the circuit. An alarm-bell is also attached which gives immediate warning in case the service fails from any cause, whether failure of the battery or breaking of the circuit wires.

When it is desired to use a regulator as the master-clock this company furnishes a fine self-winding regulator with the switch-board system inclosed in its case. In this way no care is necessary except to replenish the batteries once in twelve to eighteen months, as the alarm-bell will call attention to it in case anything goes wrong.

This system of time is used by the N. Y., N. H., & H. R. R. Co., and many others, and has *never* failed to give complete satisfaction. In cost it will compare favorably with any electric clocks ever offered to the public and is considerably less than any other system capable of giving even fairly good service.

THE STANDARD ELECTRIC TIME CO.,
New Haven, Conn.

REMOVAL.

On or about May 1, 1889, I shall remove my business to 43 Beekman Street, a much more commodious and desirable place than that which I now occupy.

I desire to thank my friends and customers for their past favors, and take pleasure in stating that it is due to their patronage in part that I am now enabled to secure a more desirable place of business.

As heretofore, I shall take pleasure in giving personal attention to all work entrusted to my care, and in my new place shall be able to show the different sanitary appliances which I am now having manufactured at a better advantage. After June I shall be able to show all the standard closets of first quality in operation in my store, and shall keep on hand a full line of plumbing fixtures.

All material sold and all work done by me will be guaranteed.

LEONARD D. HOSFORD,
66 Beekman Street, New York.

NOTES.

The Whittier Machine Company have recently put into the building of Messrs. George C. Goodwin & Co., on Hanover Street, Boston, a belt elevator for freight service.

All Saints' Church, Richmond, Va., from plans by M. J. Dimmock, architect, has recently been finished and dedicated. This church has been entirely decorated and furnished by Messrs. J. & R. Lamb, of New York. Their work includes all of the stained-glass windows, the color decoration of the walls, and all the chancel furniture in carved oak. The result obtained is very consistent and harmonious.

Messrs. Somers, Lindeman & Co. have such faith in their liquid-filler, the "Lindeman," that they are willing to sell it to responsible parties, subject to their approval. It obviates the necessity of rubbing off — an expensive and laborious task. It is an excellent substitute for white shellac. It can be used on the lightest wood without discoloring it; it is entirely transparent; hence does not cover up the finest figures of the wood; it effectually prevents suction or absorption. On ordinary close-grained woods, one coat of *Liquid-Filler* and one coat of varnish will make an excellent finish, presenting sufficient body on which to rub.

The attention of manufacturers, importers and dealers in building materials and appliances is invited to the advertisement of Bicknell's Advertising Bureau in another column. Mr. A. J. Bicknell's long experience and connection with the architectural and building trades as a publisher and advertiser is a guarantee of his knowledge of the mediums best suited to the introduction and sale of the various articles that enter into the construction and finish of buildings. In the establishing of this Bureau, Mr. Bicknell takes the position of not confining himself to the interests of any one publication, but of placing the business of his patrons where the result will be most satisfactory.

THE SANITAS MANUFACTURING COMPANY.

SANITAS SINK AND FLUSH-POT.

This new device has successfully solved the problem of the disposal of kitchen and pantry waste-water.

It is absolutely automatic in its action, and to this feature is largely due its great success.

It is so constructed that it must always do its work correctly and completely, and it *cannot be made to do otherwise*, even by the greatest ignorance or neglect on the part of the user. It operates on the principle of the intermittent automatic flush-tank, keeps the waste-pipes clean and obviates the necessity of using a grease-trap. It is provided with an accessible seal-retaining trap constructed on the principle of the Sanitas Trap, and is altogether the only complete sanitary kitchen-sink ever offered to the public.

One of the most difficult problems in sanitary plumbing is the disposal of kitchen-waste.

The fatty substances dissolved in the hot-water of dish-washing are in ordinary kitchen-sinks discharged into the waste-pipes, where they quickly congeal and clog them. To overcome this difficulty innumerable devices have been invented, but hitherto without success.

Large pot-traps have been used under the sink with the view to collecting the grease before it entered the main waste-pipes. But these traps require constant attention to remove the accumulating filth at suitable intervals, and as there is nothing in their mechanism to remind the servant when they require emptying, and as the emptying is an extremely offensive operation owing to the putrid condition of the contents of the trap, the work is neglected and the waste-pipes become obstructed as much as if no pot-trap existed. Moreover, the trap must, on account of its weight, be placed on or below the floor, leaving a considerable length of pipe between it and the sink outlet to be clogged.

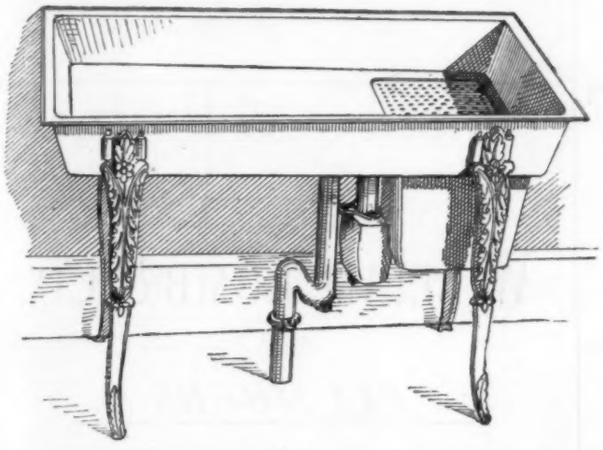


Fig. 1.

Large grease-traps have been used, but they are open to the same serious objections as the pot-traps, and utterly fail to solve the problem.

Flush-pots, with ordinary outlet-plugs, have been tried. But as the outlets must necessarily be operated by the persons who use the sink, it is found that sooner or later they are improperly used, and then greater objections than ever result.

Any simple plug-outlet in kitchen-sinks offers a tempting waste receptacle for solid refuse which an ignorant servant is certain to scrape into it to avoid the trouble of their proper removal; and even with the greatest care there is nothing to prevent the accidental passage of solid matters sufficient to clog the trap through this outlet, particularly where the strainer is movable, and in practice this is what is found to occur.

It was for the purpose of avoiding these objections that the Sanitas Kitchen-Sink was invented.

It has been assumed at the outset as an indispensable condition in the design of the apparatus, that absolutely nothing should be dependent upon the intelligence and care of the servant, and that by no possibility could the waste-passages become clogged either by accident or by design. In short, that the operation should be entirely automatic, and that the form of the outlet should be such that no solid refuse *could possibly gain access to it.*

These results have been obtained in the Sanitas Sink as follows:

The general form of sink and flush-pot, designed by the well-known sanitary engineer, William Paul Gerhard, has been adopted as a basis. It consists of the combination of a square flush-pot, with an ordinary kitchen-sink, in such a manner as to provide a sink of the ordinary appearance and form alone, but having a deep portion or flush-pot at the end. This deep portion is partly covered with a strainer, and the waste-water is discharged through a stand-pipe overflow and outlet-plug, preferably the "Sanitas" waste.

Mr. Gerhard's sink is an improvement on Colonel George E. Waring, Jr's. flush-pot, in being more convenient in form and arrangement, and hence less liable to improper usage than the latter. But neither possesses the all-important requisite of automatic action.

It remained for Mr. William E. Hoyt to suggest the use of an automatic discharge in connection with the Gerhard Sink and for Mr. J. P. Putnam to embody the suggestion in practical form in the Sanitas Sink. Thus the Sanitas Kitchen-Sink is the creation of four competent sanitarians, and its construction and operation are worthy of its parentage.

Figure 1 represents a perspective view. Figure 2 a plan and Figure 3 a section of the Sanitas Kitchen-Sink. The Flush-Pot of Gerhard is retained except that the upper or horizontal strainer covers the entire pot and is hinged to one end of the sink so that it may be opened when it is desired to use the deep part of the sink. Instead of a stand-pipe discharge however, a siphon discharge is used, and a vertical strainer is interposed between the flush-pot and its siphon. The short arm of the siphon is trapped with a seal-retaining trap of the Sanitas-trap principle just behind the vertical strainer. This strainer slides upwards in a groove to give access to the trap when desired, but closes again automatically by its own weight as soon as released. Clean-out openings are provided at the trap and wier chamber and give access to every part of the waste system. No bones and solid refuse can be scraped into the discharge outlet and dropped into the waste-pipe, because this pipe ascends instead of descends at the outlet and should the trap be clogged, it will simply cause the water to cease to flow out until the obstruction is removed, which can easily be done by simply raising the lower strainer and lifting out the obstruction by hand.

The operation of the Sanitas Kitchen-Sink and Flush-Pot is as follows: The sink is used in the ordinary manner until the flush pot fills to the height of the siphon overflow. When this point has been reached the next discharge of a quart or two of water from the washing-pan charges the siphon and causes the entire contents of the flush pot to rush out through the waste passages filling them full bore and scouring them from end to end. The solid matter and lumps of grease will be left on the bottom of the flush-pot and must be removed by the servant in the proper manner, inasmuch as they cannot possibly be removed in any other manner.

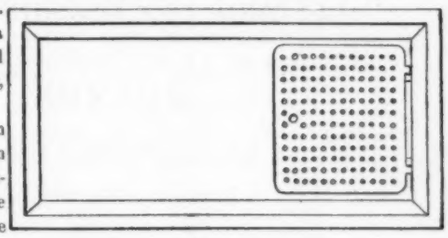

Fig. 2.

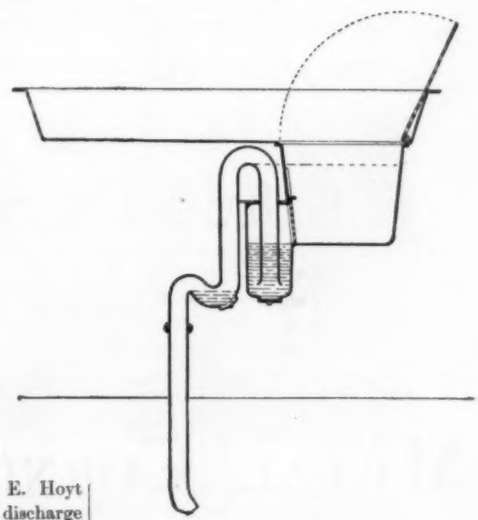

Fig. 3.

Thus by the use of the Sanitas Sink and Flush-Pot all the great annoyances, expenses and dangers arising from the discharge of sink refuse are completely avoided. Moreover, the Sanitas Sink is in most cases much more economical than any other. The Sanitas Flush-Pot is entirely constructed of iron, and is of simple form. The additional cost of the actual flushing apparatus over that of an ordinary kitchen sink is trifling. But the sink contains its own trap and the cost of trapping is avoided rendering the sink really no more expensive than an ordinary sink and trap. The Sanitas sink trap is also antisiphonic and hence requires no back-venting in which case the use of the Sanitas Sink and Flush-Pot is considerably cheaper than that of any ordinary sink.

The Sanitas Flush-Pot is designed for use

either with ordinary iron, soapstone, wooden, or any other form of sink, and is sold either alone or in combination with an iron sink body especially cut out to receive the flush-pot, as shown in the figures already referred to.

DIRECTION FOR SETTING.

The Sanitas Kitchen-Sink and Flush-Pot are set just as any sink, except that no trap is needed, a seal-retaining trap of the best and most scientific form being constructed in the apparatus itself. This trap has the very great advantage of being directly accessible from the flush-pot of the sink without the removal of so much as a screw. The trap, moreover, being anti-siphonic, requires no venting, and this expense may be avoided. The trap may be vented, however, if desired, like any other trap, in which case the vent-pipe should be taken from the lead waste-pipe just beyond the wier chamber, or at the bend of the floor, as is usual in back-venting kitchen-sink traps. But such trap-venting decreases the rapidity of the discharge of waste-water and its consequent flushing effect as much as thirty per cent, and it is to be condemned as an expensive and useless complication.

The discharge-pipe below the siphon should have as quick a fall and as much of a fall as

THE HELLIWELL PATENT GLASS ROOFS.

possible, in order to increase the rapidity of the discharge of the flush-pot and its consequent scouring action. It is best to use a 1½ inch or 1¾ inch pipe for several feet below the siphon, since a small pipe fills "full bore" easier than a larger one. At the end of the perpendicular fall the 1½ or 1¾ pipe may enter a two-inch pipe.

When soapstone or earthenware is preferred for the sink, the Sanitas Flush-Pot is provided with a wide flange, in order that the screws securing it to the soapstone may be placed at some distance from the edge of the latter for greater strength.

Fig. 4.

The flush-pot is set with such a sink as follows: A square opening is cut in the bottom of the sink of the size and form of the inside of the top of the flush-pot, and tapped to receive the bolts of the latter. The flush-pot is then bolted to the under-side of the soapstone with the bolts furnished with the flush-pot.

THE SANITAS OPAL-PULL.

Figure 4 illustrates the Sanitas Pull. This is undeniably the most ornamental and durable pull on the market. Having the texture and pure white color of the earthenware of the closet and other plumbing fixtures, it harmonizes with them in appearance, and requires no scrubbing or burnishing to keep it permanently as bright as when new. Its construction is so strong and solid that it is practically indestructable. For sale by all dealers in plumbing supplies, and by

Armand Higman, 236 Sparks St., Ottawa, Ont.

A PAMPHLET has recently been issued under the title of "Additional Designs for Iron Greenhouses, Palm-Houses and Conservatories, taken from photographs of work recently erected by Plenty's Horticultural and Skylight Works, of 144 Pearl Street, New York."

In looking it over one would be struck with the grace and proportion obtained by the very simple lines of construction, and by the subordinate part which the buildings play in the exhibit of plants, so that it is easy to realize the fact, often commented upon, of the extreme lightness and airiness of buildings of this construction, which throws no shadow and conveys the impression of unobstructed sunlight.

The growth and increasing wealth of the country is creating a demand for permanent greenhouses and horticultural structures, and by those who have experienced the constant annoyance of continually repainting and reputtying wooden greenhouses, the system of

puttyless-glazing will be well appreciated. The Helliwell Patent Puttyless Glazing has been used in this country for the past three years, and has proved itself adequate to all the varying conditions of our changeable climate. It has given universal satisfaction wherever it has been used. A glance over the letters and testimonials given will show what its patrons think of it. Some very successful examples of this system has been erected by me for the following gentlemen, among many: L. L. Lorillard, Esq., Newport, R. I.; Henry Graves, Esq., Orange, N. J.; D. B. Wesson, Esq., Northboro, Mass.; J. Pierpont Morgan, Esq., Highland Falls, N. Y.; Alfred C. Harrison, Esq., Chestnut Hill, Pa.; H. M. Boies, Esq., Scranton, Pa.; Edward D. Adams, Esq., Seabright, N. J.; W. H. De Forest, Esq., Summit, N. J.; G. Krueger, Esq., Newark, N. J.; H. B. Perkins, Esq., Warren, O.; H. E. Lawrence, Esq., Sparkill, N. Y.; M. D. Thatcher, Esq., Pueblo, Col.; J. E. Smith, Esq., Beatrice, Neb.; James Clarke, Esq., Louisville, Ky.

In the matter of skylight or roof-lights, the Helliwell system is altogether without a rival. For strength, lightness and durability the new patent rolled-steel bars are not to be compared with bars made of galvanized-iron. The system is now specified by the most prominent architects of the country on their best work.

We give an illustration of the new passenger station at Jersey City just erected and glazed under this system for the Central Railroad of New Jersey, and Baltimore and Ohio Railroads. This skylight contains about 30,000 square feet of glass, the main trusses are 32 feet apart, and the skylight-bars span 13′ 6″ between purlins. The architects are Messrs. Peabody & Stearns, Boston, Mass.

We also give sectional cuts of the shape of the bars, and of the method of arranging and fastening the glass in position.

Any one who contemplates the erection of glass buildings of any description, will benefit by the perusal of the pamphlets and circulars on this subject published by

JOSEPHUS PLENTY,
144 Pearl Street, New York.

THE STAR METAL-CORED RUBBER-STOPPER.

Among the many firms engaged in the manufacture of bath-room and laundry appliances, there is none that stands higher than The Wm. Powell Company, of Cincinnati, O. Organized in 1846 under the style of Wm. Powell & Company, and incorporated in 1886, we rank among the pioneers in this business.

Enterprising and ever on the alert, we have been quick to note the demands of the trade, and have been constantly making improvements in this class of goods. And our reputation for fair-dealing and honest work has been such that our goods have become deservedly popular, as stated. In 1886 this Company was incorporated as The Wm. Powell Company, and our faculties for doing good work have been constantly increasing.

Among the recent improvements which we offer the trade is the Star Metal-cored Rubber-Stopper, a cut of which we present herewith.

When some years ago we introduced the Star Rubber-Stopper, it was received with favor and universally adopted by the trade, but it had its defects. Now, however, we present a Stopper that is perfect. The Metal-core is completely enveloped in a rubber-casing, the core extending up into the rubber-neck, thereby preventing any strain on the rubber, and its weight is sufficient to prevent it floating from its socket. While the metallic parts being protected by the rubber casing, all danger of injuring china-basins or polished linings of bath-tubs is entirely obviated; at the same time the prices have been so reduced as to enable them to displace the old brass style. Any information relative to prices and discounts may be obtained by addressing the sole manufacturers and owners of the patent,

THE WM. POWELL COMPANY,
50, 52 and 54 Plum Street, Cincinnati, O.

NOTES.

The Manhattan Brass Company, First Avenue, Twenty-seventh to Twenty-eighth Streets, New York, whose advertisement appears on page i, are making a specialty of interior brass decorations of a superior quality for theatres, banks, offices, etc., consisting of railings and grill-work of all patterns. They have just completed the railings and grill-work throughout Proctor's new building, Twenty-third Street, located between Sixth and Seventh Avenues. A very beautiful and complete piece of workmanship in all its detail, and it would pay all admirers of fine workmanship to examine. They are also continually putting up some of the very fine brass and bronze stoop-rails seen throughout the city. For quality, finish and workmanship this Company cannot be excelled.

The Whittier Machine Company have recently put into the house of Mr. U. H. Crocker on Commonwealth Ave., Boston, Mass., an hydraulic plunger elevator for passenger service. For the Masonic Temple in Washington, D. C., one horizontal steel boiler and an hydraulic piston passenger elevator upon their Pressure Tank System. Also for Messrs. Prestwich & Fuller of Westerly, R. I., three horizontal steel boilers, each two and one-half feet in diameter.

Dixon's Silica-Graphite Paint, made by the Jos. Dixon Crucible Co., Jersey City, N. J., covers more than double the surface of any other paint. It is unaffected by heat or cold, storms, salt air, rust or even acids. A tin roof well painted will not need repainting for 10 to 15 years or longer. It is equally useful for metal, iron or wood work.

Messrs. J. & R. Lamb have recently executed for the Church of St. Martin, in the Fields, Chestnut Hill, Philadelphia, Pa., from plans by G. W. & W. D. Hewitt, architects, brass pulpit, eagle lectern, brass and oak communion-rail, and a brass and oak font-cover. All are of intricate design and elaborate workmanship. Grace Memorial Chapel, at Evansville, Ind., Messrs. Reid Bros., architects, has recently been completed. Messrs. J. & R. Lamb, of New York, have furnished for this chapel a beautiful stained-glass window, antique oak pulpit and bronze memorial tablet. The chapel is built by Mrs. David J. Mackay, of Evansville, in memory of her parents, John and Sarah Law.

An important organization entitled "Booth Brothers & Hurricane Isle Granite Company," has just been incorporated, with a capital of $250,000.00 for the purpose of carrying on an extensive quarrying and contracting business in rough and cut granite.

It is a consolidation of two important concerns. Messrs. Booth Brothers have been established in New York for eighteen years past, having their office at 60 Bank Street, and their yard at 113th Street and Avenue A, and their quarries at Millstone Point, Niantic, Conn., and Long Cove, Tenant's Harbor, Me. The Hurricane Isle Company had also been in business for a number of years in the same line.

The officers of the new company are: Mr. William Booth, President; Mr. John Booth, Treasurer; Mr. John Donaldson and Mr. Charles S. Ferguson, Secretaries. Mr. James Shands and Mr. William S. White are also among the incorporators. All of these gentlemen are well and favorably known in the trade, and all bring important connections and relationships to the new company.

The office of the company remains at 60 Bank Street, and the New York yard at 113th Street and Avenue A, and the company will operate about half-a-dozen of the largest granite quarries in the country, mostly in the State of Maine, the others being in Connecticut and Rhode Island. This consolidation of different interests makes the company one of the largest concerns in the business, and its facilities and arrangements are unsurpassed. It is quite certain that the company will do a large business from the first.

The management could not well be in stronger hands.

The season is at hand when builders of homes, are looking around for the best medium in every line, with which to improve the artistic effect of "our new house."

Among the many new styles which tend to add harmony to color, is the use of stain or coloring for mortar or plaster.

These goods are yearly growing in favor and have come to stay. Messrs. S. Bowen's Sons, 150 N. 4th Street, Philadelphia, make the "Pecora" Mortar Stains and are doing an extensive business in these goods and have recently published a book of gelatine plates, illustrating the edifices in which their goods are used, with letters from the prominent builders and architects connected with same. Architects and masons or owners, will be favored with copies by writing for them and will no doubt be enlightened and interested in this work.

DYCKERHOFF
PORTLAND CEMENT

Is superior to any other Portland Cement made. It is very finely ground, always uniform and reliable, and of such extraordinary strength that it will permit the addition of 25 per cent more sand, etc., than other well-known brands, and produce the most durable work. It is therefore the most economical to use. 8,000 barrels have been used in the foundations of the Statue of Liberty. Architects and those interested in Portland Cement will please send for my pamphlet, which will be mailed free on application. It contains valuable directions for the employment of Portland Cement, a table of results of the strength of the Dyckerhoff Cement when mixed with sand and broken stone in various proportions, together with tests and testimonials of eminent Engineers, Architects and Consumers.

THE BROOKLYN BRIDGE RESTS ON NORTON'S CEMENT.

THE TRUSTEES OF THE NEW YORK AND BROOKLYN BRIDGE, BROOKLYN, August 9, 1883.

MR. F. O. NORTON,

Dear Sir:

During the construction of the New York and Brooklyn Bridge upwards of 100,000 barrels of your cement were used. The concrete with which the caissions were filled was made with your Cement, and the entire weight of the towers rests upon it.

Your Cement has always had the preference at the same price other cements were offered for, and during part of the time in important parts of the work it was selected, even at a higher price, on account of its superiority, especially in the points of uniformity of quality and fineness.

Without hesitation I can recommend your Cement to those desiring a good and reliable article. Very truly yours,

C. C. MARTIN,
Chief Engineer and Superintendent.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md: J. D. Mallory. Newton: J. C. Potter, C. E. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott; C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

JAMES J. READ, 13 Tremont Row, Room 10.

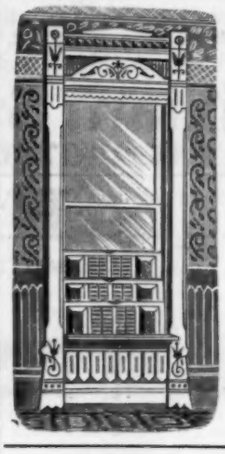
Porter-Allen Automatic Engine.

HIGH ECONOMY. DURABILITY. CLOSE REGULATION.



Hartman's Patent Inside Sliding Blind.

A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.

They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*

No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.

The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*

Agents wanted everywhere. Send for illustrated catalogue and prices to

ADVERTISERS' TRADE SUPPLEMENT.

No. 83. SATURDAY, MAY 4, 1889. Volume XXV. No. 697.

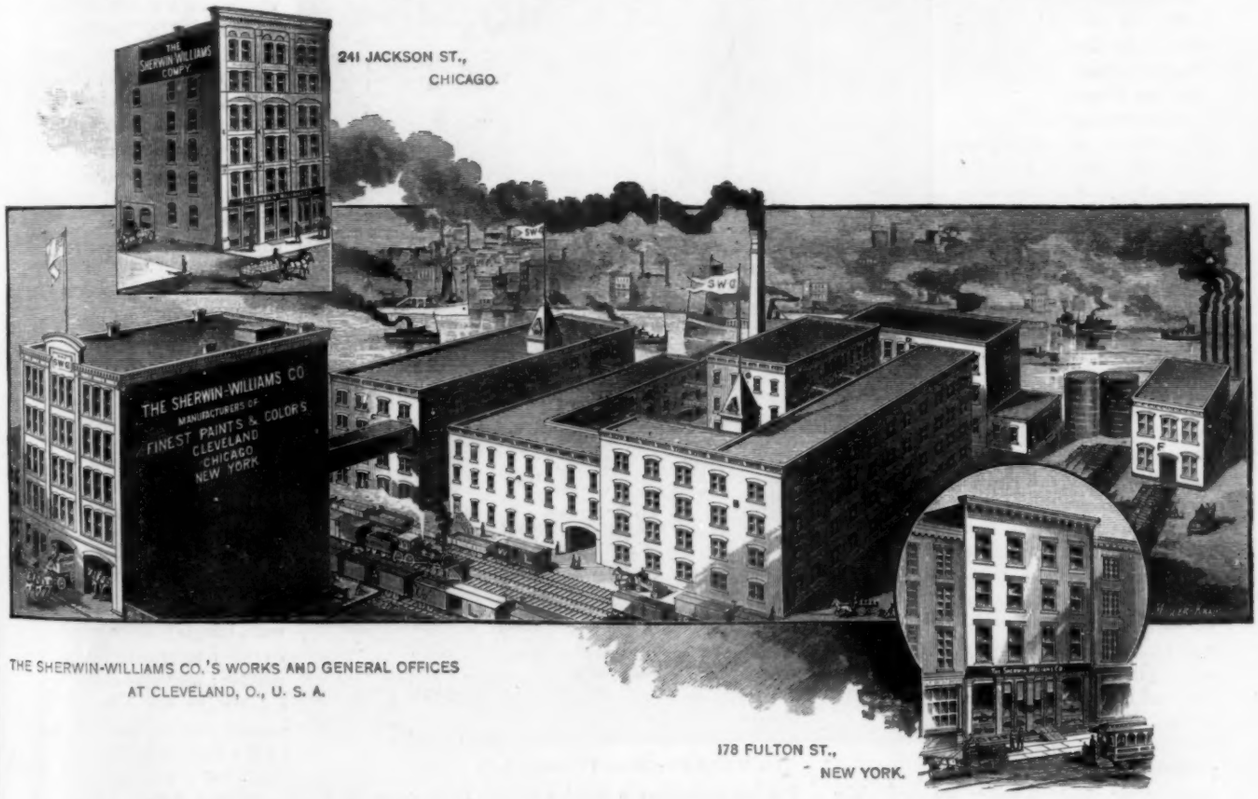
PAINTS.

Architects have an interest in all developments which directly or indirectly affect them. Working with them to a definite end are the manufacturers and artisans, who prepare and use the materials employed in erecting buildings, all tending toward a higher state of perfection, and all giving tangible and eloquent expression to their motives, talent and activity in the structures which they erect. Is this unity of interest between the architect, the manufacturer, and the artisan fully recognized? Is this essential co-working intelligently carried out? Do the manufacturer and the artisan catch the spirit of the architect, comprehend his drawings and specifications, so that his thought finds clear, tangible expression? Does the architect know the best the various manufacturers can offer for his use? Does he keep abreast of developments and improvements, so that his specifications call for the best articles? Can he be sure of satisfactory results in the carrying out of his designs unless he has entire command of his resources, and can specify the best materials?

In the manufacture of paints, for instance, there have been developments which place within reach of architects an article superior to what has been, until recent years, almost uniformly specified for the painting of buildings. This article is a prepared paint. It is undeniable that there have been good reasons for adhering to the old rule for paint specifications. Many worthless mixtures have borne the name of *paints*, and architects who have taken the trouble to investigate the validity of the claims made for these mixtures have been convinced that the paints were worthless; or, if of any value, that there was no assurance that the standard of quality, if there was one, would be maintained for any length of time. The use of such paints has been found expensive, because of their poor covering qualities, and still more because they would perish soon after being applied.

Is it just, however, to judge prepared paints of all kinds by an unfortunate experience with a few? Is it consistent with an architect's interests to stick closely to an old custom from a firm belief that it is safe when there are other ways decidedly better for him to adopt? There are manufacturers of brick, tile, ironwork, trimmings, and innumerable other articles used in buildings, whose products the architect specifies with confidence. Why cannot paint be made of such quality as to merit his confidence? It can be. It is.

The Sherwin-Williams Paint is not a mixture put upon the market for the mere purpose of enriching the men who make it. It is made and sold to paint buildings with. It was made at the first with some understanding of the building material it was intended to cover; with some knowledge of the conditions of exposure to which it would be subjected; with a definite knowledge that it must be a preservative; with a clear conception of its service as a decorative element. With these objects in view, was it possible to use any but the best materials, the completest facilities, the highest order of talent, in its production? Is it possible that, with such good objects to attain at the commencement, and a phenomenally successful experience of nearly twenty years, during which time this product has constantly tended toward a higher state of per-



THE SHERWIN-WILLIAMS CO.'S WORKS AND GENERAL OFFICES AT CLEVELAND, O., U. S. A.

fection in all points of its adaptation to architectural uses, this paint is unworthy of the architect's favorable consideration? Would it be policy for a company of honorable gentlemen, who have spent the most fruitful years of their lives in producing, perfecting and marketing standard goods, who have made their products famous for excellence all over the continent, to sully their fair reputation by letting the quality decline? It would not. Such men have all the emulation for progress and perfection in their business that architects have in their profession. A good "prepared paint" is a decidedly important article for architects to seriously consider, and to include in their specifications. The Sherwin-Williams Paint has advantages which will commend it to them. A profession like that of architecture, which, more than any other, must be studious and progressive to meet the increasingly exacting demands upon it, cannot afford to ignore the claims of reliable manufacturers.

THE SHERWIN-WILLIAMS CO.,
CLEVELAND, CHICAGO,
NEW YORK.

A SPIRAL STAIRWAY.

A FIRE-ESCAPE WHICH WILL RENDER THE MOST DANGEROUS BUILDING SAFE.

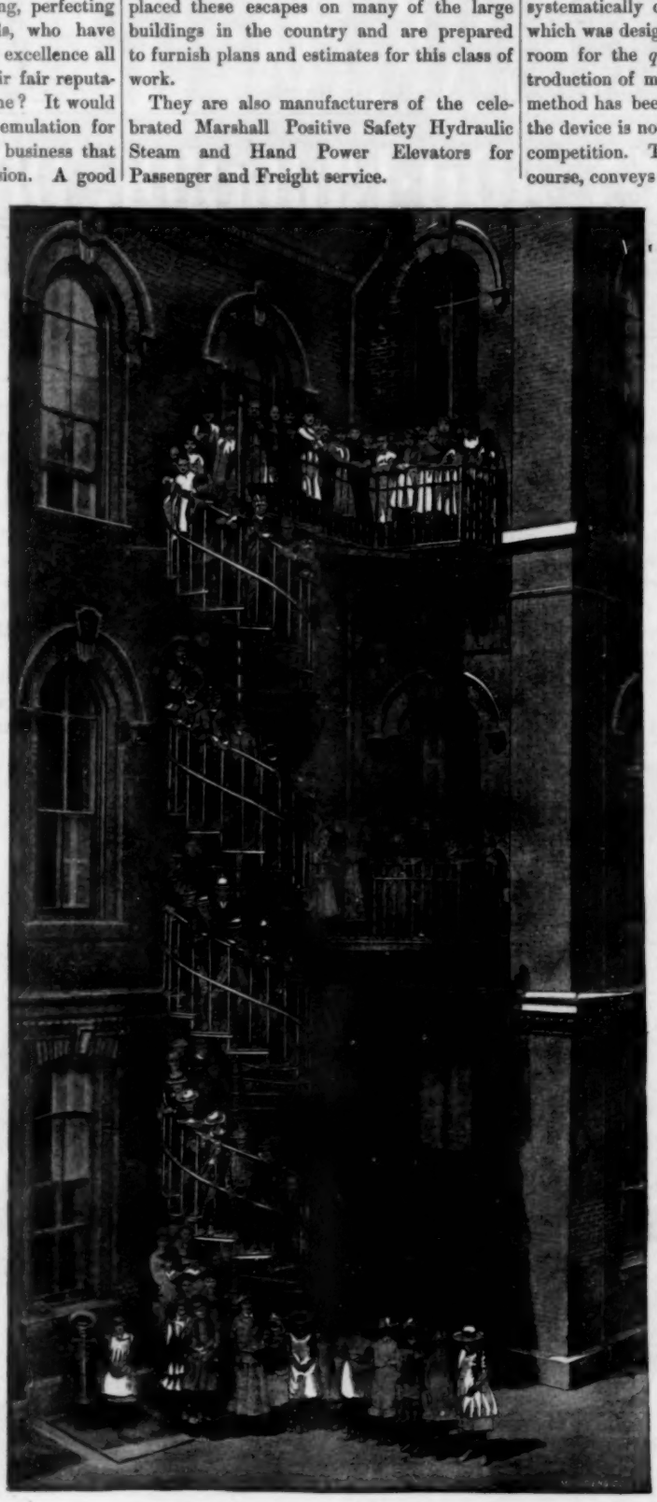
WE call our readers attention to the illustration of the Marshall Patent Spiral Stairway Fire-Escape.

The great trouble with most fire-escapes, as experience with their use at fires has shown, is that they themselves are elements of danger, especially where large numbers are trying to get away from the flames.

The Marshall Spiral Stairway and Stand-Pipe Fire-Escape is made entirely of iron, and is so constructed as to afford an easy and safe means of escape to the old and young even in a panic. The balconies connecting with the stairway are large and substantial, are furnished with an iron railing, adding to the beauty of the building instead of disfiguring it. The stand-pipe device around which the stairway runs, is a feature worthy of attention of hotel proprietors and others interested in schools, factories and public buildings and in fact wherever large numbers of either infants or adults are collected under one roof. The centre column is made of heavy wrought-iron pipe and has at each balcony and on the roof of the building hose valves, and steam fire-engines can be attached to base of stand-pipe. This feature is one which very materially assists firemen in handling the flames, and thus saves property as well as preserves lives. The frequent delays in hoisting fire-ladders is by this contrivance done away with. No mechanical operations of any kind are required, and the escape and stand-pipe are always ready for use, thus providing a means of reaching the fire as well as escaping from it.

Marshall Brothers of Pittsburgh, Pa., have placed these escapes on many of the large buildings in the country and are prepared to furnish plans and estimates for this class of work.

They are also manufacturers of the celebrated Marshall Positive Safety Hydraulic Steam and Hand Power Elevators for Passenger and Freight service.



The Marshall Fire-Escape, Pittsburgh, Penn.

For full particulars in relation to both Fire-Escapes and Elevators, address
MARSHALL BROTHERS,
Iron City Elevator Works,
69 to 75 DIAMOND STREET, PITTSBURGH, PA.

HOUSE-LINING.

THE hollow wall and empty floor-space are necessary features in frame-buildings, and whether it is advisable to seal them tight with inflammable sheathing-paper, in order to obtain insulated air, or to gain it by filling-up the spaces with a low conductor of heat, depends largely on the practical working of what is considered an air-space, and again on the value of the material forming the lining.

Ten years ago steam-pipes and boilers were systematically covered with a plaster-casing, which was designed to leave an inch or so of room for the *quiescent* air, but since the introduction of mineral wool the fallacy of this method has been so thoroughly exposed that the device is now limited to jobs not open to competition. The air on surface of pipe, of course, conveys the heat immediately to the interior of casing, and the temperatures of both these surfaces are manifestly nearly the same; again, when cracks occur in the casing, cold-air enters to replace the hot-air, thus creating a rapid circulation, which cools down the jacket from within and deceives the owner, for he is wasting fuel and does not know it.

The action of the hollow-wall space is similar to this, and quite as deceptive. The reason we make special mention of the theory is because it is widely accepted as true, and its working is so delusive that it requires explanation rather than trial.

Wherever the idea of the air-space is resorted to, whether on a boiler or in the side-wall of a dwelling, it simply introduces the properties of convection and absorption as factors, and these might better be eliminated by filling the space up.

The advantages of mineral-wool for houses will become apparent as we refer to the objects of such linings:

A. As to heat and cold.—A filling of mineral-wool in the ground-floor, say two inches thick, protects against the dampness of cellar; in the outside walls, from foundation to peak, between the studding, it will prevent the extraction of the warmth of interior, and will destroy the force of winds, which otherwise will penetrate and cause draughts; in the roof, say two inches thick, it will retain the heat which rises through stair-wells, bringing about regularity of temperature in cold weather; the upper rooms will not receive the heat of the summer sun and store it up for the occupants during the night, but remain as cool as those on the floor below; the water-fixtures in bath-rooms, closets and pantries will not be exposed to extremes of heat and cold.

B. As to sound.—As sound is communicated by the actual contact of beams, and also by the vibration of the air between them, it can well be understood how a porous material like mineral-wool will have a muffling influence on the solid parts of a building, and so occupy the space that wave motion will not be possible. Such a lining is especially desirable

about bath-rooms to deaden noise of valves and flowing water.

C. As to rats, mice, insects and disease germs.—The analysis of mineral wool shows it to be a silicate of magnesia, lime, alumina, potash and soda. The slag-wool contains also some sulphur compounds. It is plain there is nothing organic in the material to decay or to furnish food and comfort to insects and vermin; on the other hand, the fine fibres of glass are irritating to anything which attempts to burrow in them. From our experience during the past ten years, we feel confident in saying that new houses lined with mineral wool will not become infested with animal life, and old walls may be rid of their tenants by the introduction of it.

D. As to fire.—Our incombustible material renders a building slow-burning; we do not claim that the structure will be *fireproof*, for that is impossible so long as inflammable stuff is used in construction. In passages occupied by the mineral-wool, flames cannot spread; thus surely will they be exposed to sight, and an opportunity for quenching them be offered at the outset. *As an escape for the inmates, it serves the purpose better than all the ladders ever devised.*

What is described as spontaneous combustion takes place when the floor-beams, for instance, have been dried until the point of ignition is very low, and when in conjunction with this, the freely-circulating air is charged with moisture. With these two conditions fulfilled, it only needs the fanning action of a draught to start combustion. Such a coincidence of conditions cannot be brought about if the spaces between beams are filled with indestructible mineral wool.

Mineral-wool is invaluable in hospitals and asylums on account of its arresting the spread of fire, not to mention its other properties. Equally important applications can be made with it in public and private schools, music and concert rooms, sounding-boards, hotels, cottages, country residences, charitable institutions, and in deadening the flats of apartment-houses, and insulating the outside walls of conservatories, hen and pigeon houses.

FRANK E. FITTS,
Successor to GEO. DUNBAR & CO.,
74-76 PEARL STREET, BOSTON, MASS.

THE CALDWELL SASH-BALANCE.

THE Caldwell Sash-Balance is a simple, durable and compact appliance for balancing window-sashes. It consists of a thoroughly-tested steel clock-spring, coiled within an iron drum, around which is wound a tempered brass tape or ribbon, which is attached to the sash; while the resistance of the spring furnishes the requisite tension or supporting power. The tension of the spring is controlled by means of a brake, which is regulated by a screw in the face-plate, whereby the balance may easily and conveniently be adjusted at any time to the exact weight of the sash, and give to the latter a steady or uniform motion. The suspending tape or ribbon is attached to the sash by means of a bronze loop, held in place by a screw, which should be slightly loosened and the loop unhooked whenever it may be necessary to remove the sash from the frame; and, in replacing the sash, the tightening of the same screw over the loop will secure the window as before.

The mullion, or top-balance, can be applied at the top of the frame in all windows where it may be impracticable to use the side-balance.

The balances are put up in boxes, each box containing one set of four balances for the two sashes of single window, with all the necessary screws, each sash requiring two balances. Full printed directions for setting and adjusting the balances are contained in each box.

When ordering balances, be careful to give the exact weight and height of each sash.

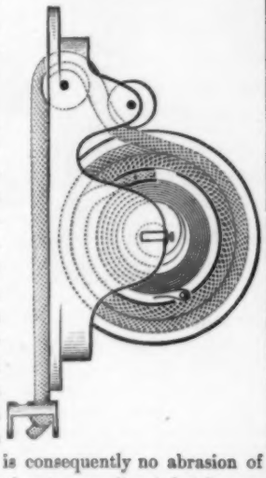
with tools expressly designed to meet the requirements of the work, will greatly increase the capacity of their works.

They have recently put into the Brigham Estate building on the corner of Portland and Causeway Streets, Boston, two horizontal steel boilers, each four feet in diameter, together with two belt freight elevators, and also constructed for the Piscataquis Falls Pulp and Paper Company of Montague, Me., a horizontal steel boiler, five feet in diameter; and have put into the building of the Boston Real Estate Trust on Lincoln Street, Boston, two belt elevators for freight service.

ROCHESTER SASH-BALANCE.

The following cut and the one on the next page represent the Rochester Sash-Balance which will prove of great value to those interested in the construction of buildings.

It consists of a hollow pulley containing a coiled steel spring, and a braided sash-cord for suspending the sash. This cord is fastened to, and winds on the pulley passing over the small wheels, as shown in sectional view. These wheels are located in such a manner that the heft of the sash, being fastened to the cord, automatically regulates the tension or lifting power of the balance. This is a great advantage over weights as the sash is always accurately balanced, even though they differ in weight.



The cord runs smoothly over the grooved wheels and at no place can it rub against the balance, there is consequently no abrasion of the cord or friction to wear it out, but in case it becomes broken by accident it can be readily replaced at any hardware store, and with very little trouble.

The advantages of the Rochester Balance are numerous. No boxes or pockets are required in the window frame, more light can be obtained in factories, etc., as the walls can be built solid against a plank frame and the room that would be required for box frames could be added to the width of the sash.

The mortise for this balance is made with a bit, and it is attached very quickly to either old or new work, and it is very little trouble in handling. It is the cheapest means for hanging window-sashes.

The Rochester Balance is meeting with great success and the company requests all architects to send for a free sample to the

R. Lamb, of New York, the color scheme having been carried out by Mr. F. S. Lamb. The glass has been done in Venetian and Opalescent, the general treatment being a rich arrangement of delicate tones of color and jewelled work. The most elaborate part of the work is in the President's office, and in the large staircase window. In the latter the date of the establishment of the Company and the monogram of the firm have been artistically introduced in connection with ribbons and foliated work.

THE Whittier Machine Company have recently constructed for the Charleston Cotton-Mills of Charleston, S. C., two horizontal steel-boilers each six feet in diameter, and also a belt freight elevator; have also put into the residence of Mr. Franklin Haven, on Mt. Vernon Street, Boston, a plunger elevator for passenger service.

THE E. D. Albro Co., Cincinnati, O., manufacturers of veneers and thin lumber, report: "We have a steady demand this season for our products. Builders and contractors appreciate well-seasoned lumber for inside finish, and the quartered sawed oak and light-colored woods are being more called for. We have a full line of all kinds, including white walnut (called butternut), cherry, quartered-oak, white maple, white ash and mahogany. Prima Vera, or white mahogany, is coming rapidly into favor. This is of a beautiful light-gold color, and finished like satinwood, which gives a warmth and tone unexcelled by any other woods. They have a full stock of hard woods of all thicknesses and kinds."

THE ingenuity of the advertiser is a matter of perennial interest and many a laugh is caused by some ludicrous conceit which has paid its own way by catching the attention for a moment. Some devices gain their point by serving as a useful utensil which keeps the advertiser's name constantly before a special public. This end has been attained by the Barstow Stove Company of Providence, who have sent out to architects as a reminder a useful little pencil sharpener.

DYCKERHOFF
PORTLAND CEMENT

Is superior to any other Portland Cement made. It is very finely ground, always uniform and reliable, and of such extraordinary strength that it will permit the addition of 25 per cent more sand, etc., than other well-known brands, and produce the most durable work. It is therefore the most economical to use. 8,000 barrels have been used in the foundations of the Statue of Liberty. Architects and those interested in Portland Cement will please send for my pamphlet, which will be mailed free on application. It contains valuable directions for the employment of Portland Cement, a table of results of the strength of the Dyckerhoff Cement when mixed with sand and broken stone in various proportions, together with tests and testimonials of eminent Engineers, Architects and Consumers.

THE BROOKLYN BRIDGE RESTS ON NORTON'S CEMENT.

The Trustees of the New York and Brooklyn Bridge,
Brooklyn, August 9, 1883.

Mr. F. O. NORTON,

Dear Sir:

During the construction of the New York and Brooklyn Bridge upwards of 100,000 barrels of your cement were used. The concrete with which the caissions were filled was made with your Cement, and the entire weight of the towers rests upon it.

Your Cement has always had the preference at the same price other cements were offered for, and during part of the time in important parts of the work it was selected, even at a higher price, on account of its superiority, especially in the points of uniformity of quality and fineness.

Without hesitation I can recommend your Cement to those desiring a good and reliable article. Very truly yours,

C. C. MARTIN,
Chief Engineer and Superintendent.

F. O. NORTON,

92 Broadway, NEW YORK.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md: J. D. Mallory. Newton: J. C. Potter, C. E. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott; C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

Hartman's Patent Inside Sliding Blind.

A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.

They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*

No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.

The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*

Agents wanted everywhere. Send for illustrated catalogue and prices to

The American Architect and Building News

ADVERTISERS' TRADE SUPPLEMENT.

No. 84. SATURDAY, JUNE 1, 1889. Volume XXV. No. 701.

THE "PERFECTION" STEAM-RADIATOR.

Recognizing the demand, which is apparently universal, for a direct Radiator for Steam and Hot-water Heating, which shall be more perfect as regards construction and design than anything hitherto manufactured, we desire to call attention to the "Perfection" Radiator.

After thoroughly investigating all the radiators now in the market, and obtaining reports from experts and consumers in all sections of the country, we have endeavored to produce an article that is superior to all its predecessors, both in appearance and construction.

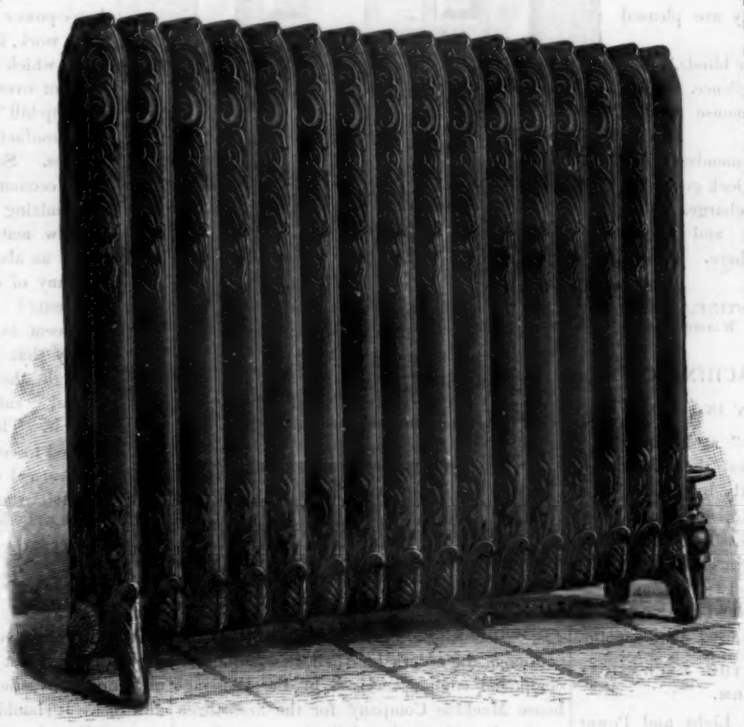
Our new radiators are manufactured in plain or ornamental style, as preferred, and we have aimed to produce a design upon the ornamental loop which is appropriate and in perfect accordance with the most advanced ideas of artistic decoration of iron surfaces, at the same time avoiding all appearance of clumsiness and harshness of outline.

In entirely dispensing with all forms of removable tops, we think we have made a long stride in the line of improvement. A removable top seems to us to be quite unnecessary, and, if put upon a radiator which has no projecting base, it is architecturally incorrect, and gives the radiator a top-heavy appearance. It is very liable to be broken, and obstructs the free circulation of air through the radiator. It also collects dust and dirt and causes the currents of warm air to impinge against the walls, producing unsightly discolorations. It makes the radiator appear too prominent and bulky as compared with its surroundings. It does not increase the efficiency of the radiator, and we cannot see wherein it is of any possible good except to hide the clumsy joints of poorly constructed radiators; hence our reason for discarding this form.

Our design for the upper portion of the radiator embraces all that is required. It has a graceful finish. It has a flat top. It will not break. It will not accumulate dirt. The decoration of the upper and lower portions of the radiator are in perfect harmony, as may be observed by examining the cut.

The result of our efforts is that we have produced a radiator which is architecturally correct and in perfect taste artistically.

Our improved construction secures free, unobstructed and large openings for the passage of steam and water. The loops have the full areas of heating-surface which we claim for them, and our castings are as perfect as the finest irons and the best workmen can make them.



The "Perfection" Steam Radiator.

The loops of our hot-water radiators are screwed together top and bottom with right and left nipples made of steel, and by this process the loops are drawn tightly together and held firmly in place, the face of each loop at point of contact being milled perfectly smooth and true. No packed joints are used, nor joints of any kind which require bolts or rods to hold the loops together. The screwed nipple we use makes a permanent joint, and the longer it is in place the tighter it becomes. The loops of our steam-radiators are connected at the bottom only with the same style of nipple as above described for hot-water radiators.

The supply and return openings are adaptable to any of the different systems of piping now in use. We have erected an entirely new plant for the exclusive manufacture of radiators, equipped it with the most perfect special machinery obtainable, and have at present a capacity for producing 10,000 feet of radiation daily. Any letters of inquiry or other communications with which we may be favored will receive our prompt and careful attention, and we shall be pleased to quote terms for large or small quantities.

MICHIGAN RADIATOR & IRON MANUFACTURING CO.,
Detroit, Mich.

A POPULAR WINDOW-BLIND.

The Hartman Patent Sliding Window-Blind, advertised on another page of this issue, is rapidly growing into public favor, and has already gained a widespread reputation such as no other blind of the kind has attained.

One of the important features connected with it is its *Burglar-Proof Lock*, which comes attached with each set of blinds *free of charge*. This is an advantage that no other blind in the market has; and in these days of house-burglary and robbing, it is an item of no small consideration, and may save the owner and home many times the cost of the blind, and, perhaps, life also. Reader, if you are building, you cannot afford to use any other blinds. They have many other advantages over all other blinds, which, for want of space, we cannot enumerate. The highest recommendation they can have is the unprecedented and constantly increasing demand for them by architects, builders and the

public, so that each yearly output for the past few years, doubles that of the former year, and judging from present prospects, the fourth year since their invention, will double again the output of last year.

The cut represents the "Novelty Style" of the blinds, which is a modification which has certain conveniences that are often preferred to the common styles. In this the blind-sections are made in the usual manner. But the inside divisions of the lower section is made to swing on hinges, so as to open and shut at pleasure, while, at the same time, the section slides up and down in connection with the other sections.

Five patents have already been issued, while three more applications for important improvements are now pending in the United States Patent Office.

The manufacturers are receiving hundreds of *voluntary* and *unsolicited* recommendations from parties having them in use.

Dr. D. H. Howell, M. D., of Atlanta, Ga., writes to a friend as follows, dated May 7, 1889: "Having used the Hartman inside sliding-blinds in my new residence, I consider them the best blind of the kind on the market."

Such expressions of commendation as the following are quite frequent:

"I thank you for sending me the best blind I ever saw."

"We continue to like them."

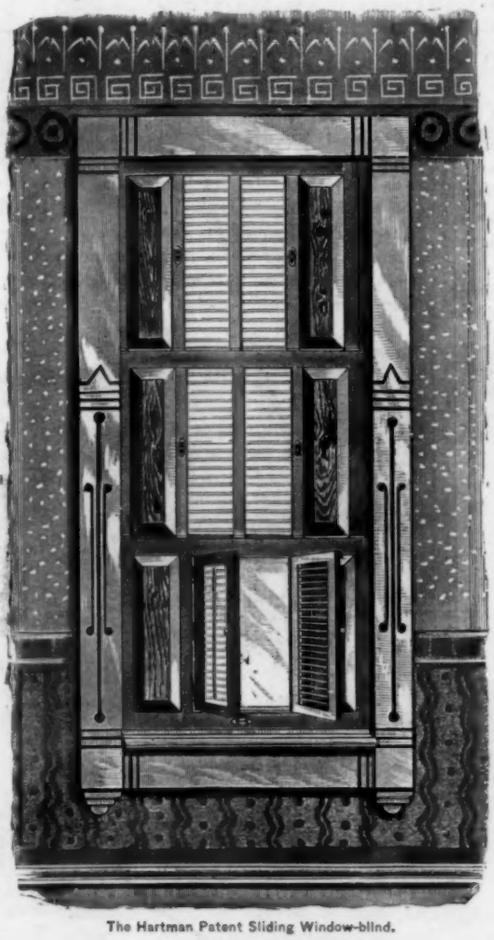
"The ladies especially are pleased with them."

"I would have no other blinds."

"They are *par excellence*. I bespeak for them an immense trade," etc., etc.

If you are building, remember it has no equal, a burglar-proof lock goes with each set of blinds free of charge. Send for illustrated catalogue and prices. Agents wanted everywhere. States rights for sale. Address

HARTMAN & DURSTINE,
WOOSTER, O.



The Hartman Patent Sliding Window-blind.

WESTINGHOUSE MACHINE CO.

AMERICAN MACHINERY IN SPAIN.

The great "Tarzuela" at Madrid, Spain, which is the largest theatre in the kingdom, has recently introduced a complete installation of electric-lighting, under the supervision of Mr. L. Delannoy, mechanical engineer, of Barcelona; a 12 and 20 x 12 Westinghouse Automatic Compound Engine, built at Pittsburgh, being used as the motor.

HAVANA INTRODUCES THE MECHANICAL GLOW-WORM.

The Spanish-American Light and Power Company of Havana, Cuba, have completed their new plant, which is now in very successful operation. The power consists of one 13 and 22 x 13 (125 horse-power) and one 10 and 18 x 10 (65 horse-power) Westinghouse Automatic Compound Engines.

INCREASING ITS CAPACITY.

The Westinghouse Machine Company of Pittsburgh, Pa., is fitting up a new machine-shop, for large work, on the east side of Twenty-fifth Street and Liberty Avenue. A very large new planer, by William Sellers & Co., is already erected and in operation, and a large new cylinder boring-machine, of special design, by the Pond Machine Tool Company, is now in process of construction, with the delivery promised for June 1. Other large tools will be added. The new shop is rendered necessary by the company's heavy run of orders for large compound engines.

A PROSPEROUS MONTH.

Although the month of May, 1889, will not go down into history as an unusually prosperous one, from a business standpoint, the Westinghouse Machine Company report orders received for the first twenty-one days of the month as follows: Westinghouse Automatic Compound Engines, 17 (1,885 horse-power); Westinghouse Standard Automatic Engines, 19 (745 horse-power); Junior Automatic Engines, 30 (745 horse-power); 21 days' totals, 66 (3,375 horse-power).

If the remaining ten days of the month show the same ratio, this will prove to be a very prosperous month in the company's history.

ORDERS FOR COMPOUND ENGINES.

Among the orders for their new automatic compound engines received by the Westinghouse Machine Company for the first three weeks in May, the following prominent buyers may be mentioned: Baldwin Locomotive Works, Philadelphia, Pa., one 200 horse-power; Southern Cotton Oil Company, Memphis, Tenn., one 250 horse-power and one 200 horse-power; Omaha & Council Bluffs Railway and Bridge Company, Omaha, Neb., three 200 horse-power; L. Delannoy, Barcelona, Spain (for Clariana, Ciuro, Pubeonat & Co.), one 35 horse-power; Electric Improvement Company, San Francisco, Cal., one 80 horse-power and one 35 horse-power; Pennsylvania Institute for Feeble-Minded Children, Elwyn, Pa., one 50 horse-power and one 35 horse-power.

SUCCESS IN MANUFACTURING.

The question has often been asked: Why does one man succeed in business and another man fail? If one has a due regard for history, it would perhaps be nearer the truth to ask: Why do three men succeed in business and ninety-seven fail? In so far as the manufacturing business is concerned, the agents of the Westinghouse Machine Company have recently been making some investigations that at least afford a clew to the answer. In order to obtain statistics for use in their catalogues, this company sent experts, fully equipped with the necessary instruments, to visit a number of the most prominent manufacturing establishments in the country, where permission was asked to test the consumption of power by each machine. As a rule, this was readily obtained from the owners, they seeming much interested in the results. It is only necessary to indicate a few of the results obtained to make clear the point aimed at. Nearly all were wasting one-half ($\frac{1}{2}$) of their engine's power (or one-half of the daily consumption of fuel) before commencing actual work, the product from which constituted the maintenance of the business. One prominent establishment was wasting sixty-five (65) per cent of its fuel and power; another was wasting seventy-three (73) per cent, thus leaving only twenty-seven (27) per cent of the engine's power to earn money with. Another celebrated firm (known all over the West) was using a 60 horse-power engine, of which 55 horse-power was being consumed in dead work, thus leaving 5 horse-power with which to produce goods for sale without overtaxing the engine. It is an "up-hill" business to make money in manufacturing under such circumstances. Sensible people should be more economical. What is the use of economizing in wages and in the cost of raw materials when such reckless waste as above indicated is permitted in many of our most prominent establishments? Few people in this country seem to realize the amount of money that can be wasted in a year through the steam-pipe. The proverbial "rat-hole" will not compare with it. The manufacturer who has learned to economize at the steam-pipe has learned one of the most important secrets of success.

WESTINGHOUSE MACHINE CO.,
PITTSBURGH, PA.

DIXON'S SILICA-GRAPHITE PAINT.

A paint to give satisfaction should be a protection against heat, cold, the changes of temperature, the wear and tear of storms, and rust. It should be durable, easily laid on, cover well, and economical.

Graphite and Silica stand equally well extreme cold and the changes of temperature; they cannot be touched by rust, and both are a sure protection against the influence of a salt atmosphere.

Graphite is very light. One pound of Graphite is three times the bulk of one pound of white lead, and twice the bulk of mineral paints; hence in use we guarantee Dixon's Graphite Paint to cover fully twice the surface of white lead or mineral paints.

The natural color is a slate, but we can furnish it in all shades from a slate to a jet black, suitable for regular surface painting or trimmings for houses, out-buildings, metal or shingle roofs, bridges, locomotive work,

agricultural implements, and, in short, all exposed wood or metal surfaces needing a durable and economical paint.

Graphite is one of the forms of carbon. It is healthful in itself and, as it is unaffected by contact with any known substance, it suffers no chemical change and remains always the same. All the ingredients of Dixon's Graphite Paint are harmless. Painters will suffer no cramp or colic in using it, and cistern-water gathered from roofs painted with this paint will be perfectly pure.

A tin or metal roof painted two good coats, with a third coat put on the following year, will not need repainting for fifteen years unless worn by walking on or otherwise abused.

There appears to be no limit to the time that a tin roof will last if it is protected from atmospheric action by means of paint, and is not worn or injured by walking on or other causes. Testimonials we have received show that tin roofs painted with Dixon's Graphite Paint have not only lasted fifteen years without repainting, but required originally only from one to two-thirds as much paint.

Iron has a tendency to oxidize from the moment it leaves the hammer or rolls, and should be painted to protect it from the rust which attacks the metal and soon destroys it.

Bituminous paints, as well as those containing variable quantities of lead, were formerly considered the best, but their failure has been made apparent when the structures to which they were applied have been of sufficient size to be subject to the many changes of the weather as well as constant vibration. Dixon's Graphite Paint has been found, by careful and practical tests, to be peculiarly suited for iron work.

In 1884 the Trenton City Bridge Company painted their bridge (1275 feet long) across the Delaware River with Dixon's Graphite Paint, and inspection now (1888) shows that after four years' wear the paint is as good as the day it was put on.

For metal roofs, bridges, locomotive work, agricultural implements, and, in short, all exposed metal surfaces needing a durable and economical paint, nothing can be found that will begin to equal Dixon's Graphite Paint.

For house-trimmings, out-buildings, shingle roofs, boats, wooden bridges, agricultural implements, fences, etc., Dixon's Graphite Paint is the best that can be used, for less paint is required, and it is almost everlasting.

It is prepared thick, ground in oil, about the consistency of a stiff paste, in 10, 25, 50, and 100 pound packages, and in barrels of about 450 pounds, or thinned, ready mixed for the brush, in 5, 10, and 25 gallon packages, and in barrels of from 40 to 50 gallons.

JOSEPH DIXON CRUCIBLE COMPANY,
JERSEY CITY, N. J.

A LARGE number of Catholic schools on Staten Island, N. Y., have been plastered with King's Windsor Cement, and we are informed more will soon be plastered with the same material.

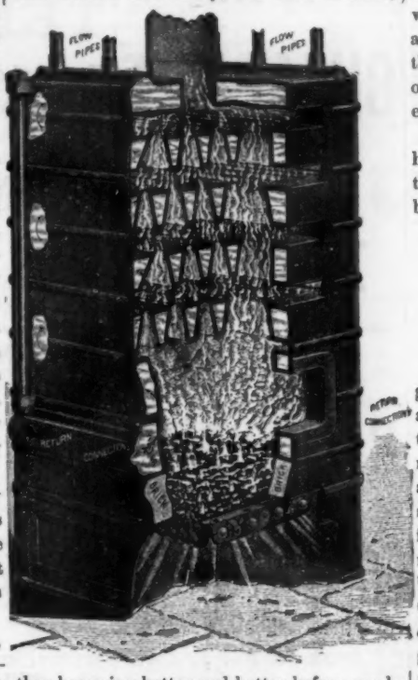
The office of J. B. King & Co., the manufacturers, is at 24 State Street, New York. The plastering department is in charge of Mr. Lovell H. Carr.

"PERFECT" HOT-WATER HEATERS.

WE show herewith an illustration of the "Perfect" Hot-Water Boilers. These boilers are becoming very popular throughout the country, from the fact that they have the enormous heating capacity which experience has found to be absolutely necessary. They are made with special reference to heating water quickly and economically; and at the same time, are so constructed as to create a quick, positive circulation, which is an absolute necessity in heating by hot-water circulation. They are pronounced by the most experienced experts in the country as having more power, size for size, and being far in advance of any hot-water heater hitherto made.

First, they present two and one-half times more surface to the direct action of the fire than any boiler made, size for size. This surface is designated and parties can intelligently ascertain the amount of capacity each boiler has.

Second, the construction of the heater is such that each particle of the water is compelled to pass around and over the fire seven different times in its natural course through each section alternately, one after another,



thus becoming hotter and hotter before reaching the mains, a result not heretofore accomplished; consequently the upper sections of our boiler are the hottest, showing by actual fact that instead of the lower sections doing all the work, each and every section is doing its share, and the water is raised in temperature on its way upward to the mains. No other boiler is made producing this same important result, as the majority of boilers are constructed so that the water virtually passes only once over the fire and then into the direct water columns, thus passing off to the mains. Whereas in the "Perfect" Boilers the water in the lower section has to pass to the next section above, and then through the third section, and so on up to the mains. The result is great power with an economical use of fuel.

Third, with the "Perfect" Heaters the formation of steam and the stoppage of circulation is an utter impossibility, as their construction compels the water to flow in a natural manner through each of the water sections, which are each exposed to the fire, giving a quick, positive circulation which is unprecedented, and compelling the water, when leaving the boiler, to leave it hot. The great difficulty heretofore in ordinary Hot-Water Boilers has been their slow, sluggish circulation. The "Perfect" Boilers work to the contrary. The circulation is rapid and discharges the heat effectually, and universally give the best of satisfaction.

Fourth, the enormous fire-surface which each section exposes to the direct action of the fire, produces great heating results. Eighty-five per cent of the square feet of boiler surface is direct fire-surface, and fifteen per cent is flue-surface, which gives us two and one-half times more fire-surface than any boiler yet constructed, size for size.

These boilers have been used, giving excellent satisfaction, as will be seen by the testimonials which will be sent at request and we respectfully call attention to these popular "Perfect" Heaters of all who are desirous of obtaining a powerful Hot-Water Boiler for heating purposes.

By sending us a rough sketch of the first and second stories of a house, giving size and height of rooms and halls, designating those which are to be heated, and marking which way is north, we can intelligently advise as to the proper size required to heat the house in cold weather; and give also any other information relative to piping radiators, etc.

These heaters are adapted for burning hard or soft coal, or natural-gas. Owing to their construction any of the above fuels can be used with equal success.

RICHARDSON & BOYNTON CO.,
232 & 234 WATER STREET, NEW YORK, N. Y.

METAL INTERESTS.

THE rapid progress made in artistic metal goods during the past ten years can only be appreciated by a visit to the show-rooms of the large manufacturers. Specially prominent can be mentioned the industry of gas and electric fixtures. A visit to the spacious show-rooms of the Archer & Pancoast Manufacturing Company, whose principal warerooms are at 900 Broadway, New York, with branch stores at 270 and 272 Wabash Avenue, Chicago, and 12 West Street, Boston, will disclose pretty much everything that inventive genius and mechanical skill have been able to produce in the way of artistic illuminating apparatus, while the assortment of fine metal-work is unsurpassed in any city in the world. Here an observer will note that every detail of the architect and interior decorator has been followed, so that harmony may reign supreme when the house is finished.

The illuminating fixtures of to-day are designed with a view of furnishing interiors, be they for gas, electric-light or both combined; these fixtures are made of bronze, and finished in many different colors to suit each particular case. Cast-iron is wrought into many curious shapes for illuminating fixtures, its most expensive treatment, being polished.

The magnitude of the above-mentioned company can only be realized by a tour through their factory at Thirty-third Street and First Avenue, New York, where are employed one thousand skilled workmen, under the experienced supervision of Mr. Chas. H. Fischer.

ARCHER & PANCOAST MFG. CO.,
898-900 BROADWAY, NEW YORK, N. Y.

THE well-known maker of pumping machinery, Henry R. Worthington, has just opened a branch office at 338 Sibley Street, St. Paul, Minn. This is an addition to offices at New York, Boston, Philadelphia, Chicago, St. Louis and San Francisco.

NOTES.

The Whittier Machine Company have recently constructed for Messrs. F. W. Bird & Son, of East Walpole, Mass., two horizontal steel-boilers, each six feet in diameter.

Mr. John Williams, who is one of the most earnest promoters of the modern revival of artistic wrought metal-work, has removed his establishment to 544–556 West Twenty-seventh Street, New York, N. Y.

Mr. George Westinghouse is having his summer residence at Lenox, Mass., plastered with King's Windsor Cement. Mr. H. Dodge of Pittsfield, the contractor, reports that he never saw finer plastering.

On May 1, 1889, the firm of C. A. Blessing & Co., of New York, was dissolved by mutual consent. The business in plumbing goods of the above firm will be continued by George A. Blessing and Henry Stein, Jr., at 52 Cliff St., under the name George A. Blessing & Co.

Dr. Meredith's new church in Brooklyn, one of the largest churches in that city, is plastered with King's Windsor Cement, and is worthy the attention of architects and builders.

The N. Y. C. & H. R. R. R., have given King's Windsor Cement for plastering walls and ceilings, a severe test, with the result of which they were so well pleased, that John D. Fouquet, the head architect has given J. B. King & Co., a very strong letter recommending it to all who want first-class plastering.

The new station of the New York and Northern R. R. at Yonkers, N. Y., has just been plastered with King's Windsor Cement, and is worthy of the attention of all in that vicinity who contemplate building. Mr. George Edward Harding, 40 Exchange Place, New York, Architect, and Mr. Perry, Contractor.

We have had the pleasure of viewing an exhibition of Mr. Wm. Scott Morton's Tynecastle Modelled Canvas, in a private room of Messrs. W. & J. Sloane's premises in New York, and are glad to be informed that the Tynecastle Company intends in the fall to open an office in that city where a permanent display of that highly artistic material will always be on view for the convenience of architects and decorators.

It may interest engineers and architects to know that Twenty-four Inch Steel Beams are now made in America.

The announcement is made that we have successfully rolled this size.

We inform our friends and customers that we have a stock of Twenty-four Inch Steel Beams on hand.

The lightest section weighs 80, the heaviest 100 pounds per foot.

Correspondence solicited.

CARNEGIE, PHIPPS & CO., LIMITED.

Messrs W. D. Allen & Company, Chicago, who represent the New York Belting and Packing Company, New York, in that city, have just issued a new and attractive catalogue, containing full description of their large line of vulcanized rubber goods. The cover, which is of a good quality of paper, is of a buff tint, and printed in red and bronze; a view of the Company's warehouse and salesrooms, 151 Lake Street, being shown on the back. It is a pamphlet of forty pages, profusely illustrated, typographically correct in every particular, and great care and much labor has evidently been bestowed in its preparation and production. Its perusal cannot fail to be of benefit to those interested in the line of goods which Messrs. W. D. Allen & Company handle.

Dealer in Tinplates, Sheet Irons, Sheet Zinc, etc.

26 Oliver Street, BOSTON, MASS.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas, is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 260,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

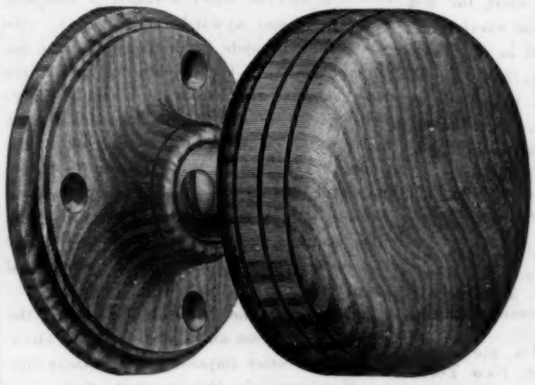
WORKS No. 1, CREIGHTON, PA.

WORKS No. 2, TARENTUM, PA.

Western Union Wire and Telephone connection in General Office at Creighton, Pa.

E. L. FORD, Sec.

Bardsley's Patent Wood Door Knobs.



The most desirable medium priced KNOBS in the market. Handsome in appearance, beautifully and durably finished, and pleasant to the hand. Every Knob warranted not to come loose or give out in any way. Besides the regular woods which we carry in stock, we make them to match special trim in such woods as Sycamore, Hazel, Birch, Whitewood, Yellow Pine, etc,

The engraving represents No. 116 Knob, list price, **$6.50 per dozen pairs.** We also have Door Stops and Shutter Knobs, hand-turned and polished to match the Door Knobs, which cost but little more than the common goods.

Price List on application.

DYCKERHOFF
PORTLAND CEMENT

Is superior to any other Portland Cement made. It is very finely ground, always uniform and reliable, and of such extraordinary strength that it will permit the addition of 25 per cent more sand, etc., than other well-known brands, and produce the most durable work. It is therefore the most economical to use. 8,000 barrels have been used in the foundations of the Statue of Liberty. Architects and those interested in Portland Cement will please send for my pamphlet, which will be mailed free on application. It contains valuable directions for the employment of Portland Cement, a table of results of the strength of the Dyckerhoff Cement when mixed with sand and broken stone in various proportions, together with tests and testimonials of eminent Engineers, Architects and Consumers.

INVALUABLE TO ARCHITECTS.

Safe Building.

BY LOUIS De COPPET BERG.

Series I. Square 8vo. Illustrated with numerous formulæ, diagrams and tables. . $5.00

"The author proposes to furnish to any earnest student the opportunity to acquire, so far as books will teach, the knowledge necessary to erect *safely* any building. First comes an introductory chapter on the Strength of Materials. This chapter gives the value of, and explains briefly, the different terms used, such as stress, strain, factor-of-safety, centre of gravity, neutral axis, moment of inertia, etc. There follows a series of chapters, each dealing with some part of a building, giving practical advice and numerous calculations of strength; for instance, chapters on foundations, walls and piers, columns, beams, roof and other trusses, spires, masonry, girders, inverted and floor-arches, sidewalks, stairs, chimneys, etc."

These papers are the work of a practising architect, and not of a mere bookmaker or theorist, Mr. Berg, aiming to make his work of the greatest value to the largest number, has confined himself in his mathematical demonstrations to the use of arithmetic, algebra, and plane geometry. In short these papers are in the highest sense practical and valuable.

DETROIT HEATING & LIGHTING CO.

Factory and Home Office, Detroit, Mich. Branch Office, 87 Dearborn St., Chicago.

The MARR CONSTRUCTION COMPANY

ome representative electric light plants erected by The Marr Construction Company, showing an important variety of conditions and difficulties successfully overcome:

HOOSAC TUNNEL. The lighting of this the longest tunnel in the country (4¼ miles) has for years been regarded as an impossibility. It has now (March, 1889) been successfully completed and contains 1,250 16 candle incandescent lamps.

CHICAGO, ILL. A central station with an ultimate capacity of 40,000 lamps. All the wires being underground. A marvel of compactness, both in steam and electrical completeness. The light has not been stopped an hour since the dynamos were started.

UNITED STATES SENATE. An isolated plant of 1,300 16 candle power lamps operated on the alternating system. It is remarkable on account of the completeness of the inside (concealed) wiring, the admirable distribution of light, and the economy of its operation.

JUIZ DE FORA, BRAZIL, S. A. This plant is operated by water-power, the "feeder" lines being of great length. The station is 4 miles distant from centre of distribution of lights, and shows what can be accomplished by even a distant water-power.

NEW ORLEANS, LA. The peculiarity of this central station system is its immense pole line, comprehending more weight of copper than any other built up to the time of its erection.

WEYER'S CAVE, VA. The lighting of this great cave was attended by many difficulties. The arrangements of lights were made entirely by this company, and include many incandescent lamps of 25, 50, 75, and 150 candle power.

HAVANA, CUBA. The first system ever built in Cuba by an American company. It consists of both arc and incandescent lights and is now running successfully.

SKOWHEGAN, ME. The electricity is generated by water-power six miles from the centre of lighting. When the *power was first turned on* it was found to light successfully. It is operated on *2,000 volts!*

Many other plants of larger or smaller size might be mentioned. Our work can be seen in *all parts of the country.* We are erecting plants of from 50 to 40,000 lamps capacity.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md.: J. D. Mallory. Newton: J. C. Potter, C. R. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott: C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

JAMES J. READ, 13 Tremont Row, Room 10.

For Heating and Ventilating.

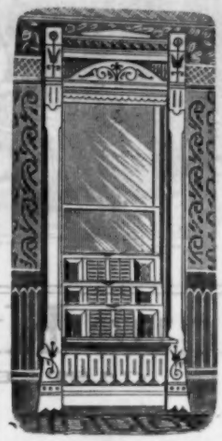
No other apparatus has as large and light running a fan wheel by half.

No other apparatus can drive half as large a volume of air over the steam-heating pipes with anywhere near as little power.

No other apparatus handles cold air in the fan and pushes it hot, direct from heater into buildings to be heated.

For further information address,

HUYETT & SMITH MFG. CO., Detroit, Mich.



Hartman's Patent Inside Sliding Blind.

A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.

They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*

No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.

The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*

Agents wanted everywhere. Send for illustrated catalogue and prices to

Correspondence Solicited, and Lowest Prices Guaranteed.

THE ONLY REAL
EXPANDING CONDUCTOR.
THE IRWIN & REBER
PATENT
EXPANDING WATER CONDUCTOR.
MANUFACTURED BY THE
S. S. S. Conductor Co.
LIMITED,
163 Lacock Street,
ALLEGHENY, PA.

THE STANDING SEAM allows of an easy and secure fastening, keeping the pipe far enough from the wall to make any overflow from the eave pipe or head, run down the spout, and not the wall; and will open, in case of freezing, so as to prevent bursting, and still remain double-locked and water-tight.

Made in 6-foot lengths, in a single sheet of
SOFT STEEL,
Either Galvanized, Kalameined or Leaded.
AGENTS FOR NEW ENGLAND STATES.

The Rendle Company, (L't'd),

(Successors to Arthur E. Rendle.)

Offices: 2 WALL ST., NEW YORK.

BUY THE DECENNIAL INDEX.

In What Does the Value of a Roofing Plate Consist?

When two brands of Roofing Plates are selling side by side in the market, one bringing a much higher price than the other, what is it that enables the former to find sale?

It is because it is superior; will last longer and wear better, and give better satisfaction.

The firm dealing in such goods is obliged to charge more for them because they cost more to make; but, while the superior article costs a little more in the first place than the inferior, it will, in the end be found much less expensive.

The above is an axiom. It is not only a self-evident truth, but, being such, it is a universal truth.

This explains our position in regard to our Guaranteed Brands of Roofing Plates better than anything else we can say, and in fewer words.

It is not easy for one to buy the best of any desired article, even when the best is wanted, as misrepresentations (made by those fearing honest and equal competition) have a natural tendency to deteriorate quality, unless met by just as powerful a determination to adhere to the standard which this house has adopted.

Those, however, who desire the best Roofing Plates have it in their power to purchase them, *and at a cost so little greater than that of the inferior grades*, that it would lead one to suppose the reputation of the first-class article was being traded upon by others offering the ordinary goods at a trifle below the price at which the best can be sold, in hopes of attracting buyers who have not given the subject much thought.

We not only give the purchaser the best Roofing Plates, but we protest him—

1st. By giving our Guarantee.
2d. By stamping each sheet with Brand and Thickness.
3d. By excluding wasters.
4th. By branding the net weight of the 112 sheets on the box, to satisfy the customer (in this age of light-weight plates), that he is getting what he ordered.

For the benefit of those wanting the very best Roofing Plates, we assert, and are prepared to prove, that there are no other brands of Roofing Tin being offered in the market to-day, by any firm, under the four different guarantees given above by this house, and we challenge a public contradiction of this statement.

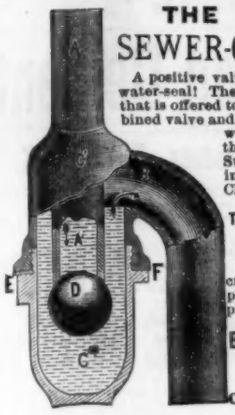
Sanitary Appliances



THE BOWER
SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

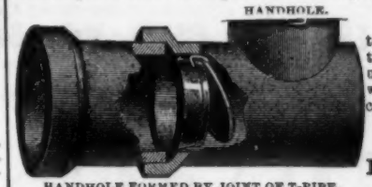
B. P. BOWER & CO.,
Manufacturers,
Cleveland, - Ohio.

Protect yourselves against Sewer Gas and Back Water by using

The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.

Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.

Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe



HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on application.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

THE CAST SINK MUST GO

MANUFACTURERS OF
Fine Bronze Hardware, Bank, Office and Stoop Railings in Bronze or Brass. Antique Furniture-Trimmings. Electrical and Mechanical Bell-Hanging Burglar-Alarms.
Warerooms, 1180 BROADWAY. Factory, 157-163 WEST 29th STREET, NEW YORK, N. Y.

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE CELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH."

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

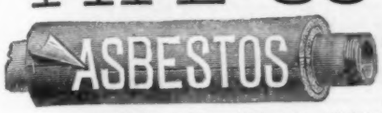
We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.



This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md: J. D. Mallory. Newton: J. C. Potter, C. E. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott; C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

GURNEY HOT-WATER HEATER.

ALBANY, N. Y., June 19 1888.
GURNEY HOT WATER HEATER CO., Boston, Mass.
DEAR SIRS:—Yours of the 16th inst. as regards my Gurney Hot Water Heater I have to say that I was satisfied it was the best in the market before havin same placed in my house. Before deciding upon any system I made it a point to thoroughly look after the different systems of heating, and finally settled down upon the Hot Water System and when ready to decide upon what hot water apparatus to use, did, after a careful study, decide upon yours, and it proved to my satisfaction. It is very easy to take care of, economical in fuel, steady heat, and simple in operation; therefore I can and will most heartily recommend it.
Yours very truly, ERNEST HOFFMAN, Arch't.

JENKINS BROS. VALVES.

THE ENDORSEMENT OF FIRST-CLASS ENGINEERS AND MECHANICS THROUGHOUT THE COUNTRY has fully demonstrated these valves to possess the following advantages over all other valves now in use:

1. A perfectly tight valve under any and *all pressures of steam, oils, or gases.*
2. Sand or grit of any kind will not injure the seat.
3. You do not have to take them off to repair them.
4. They can be repaired by any mechanic in a few minutes.
5. The elasticity of the Disc allows it to adapt itself to an imperfect surface.

In Valves having ground or metal seats, should sand or grit get upon the seat, it is impossible to make them tight, except by regrinding, which is expensive if done by hand, and if done by machine soon wears out the valve, and in most cases they have to be disconnected from the pipes, often costing more than a new valve. The Jenkins Discs used in these valves are manufactured under our 1880 patent, and will *stand any pressure of steam, oils, or acids.*

OUR OLDEST ADVERTISER.

We ask attention this week for the advertisement of Mr. W. J. McPherson on page iii. This gentleman showed his faith in our undertaking by placing his advertisement in the first issue of this journal, January 1, 1876, and has kept it ever since that time in this journal. An advertising connection of such length is not a very common occurrence, and may safely be assumed to indicate a good deal of mutual satisfaction and benefit.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

WANTED.

CATALOGUES. — To advertisers in *American Architect and Building News:* By reason of my removal from Wheeling, W. Va., to this city, I have lost the most of my catalogues and circulars in transit. I would be greatly obliged to all dealers and manufacturers of building materials, etc., if they would send copies of their circulars and catalogues to my present address. Chas. P. Hamilton, architect. No. 3111 Lagrange St., Toledo, Ohio. 680

WANTED.

Pen-and-ink etchings or drawings already lined rendered in Color, Sepia or Ink. Designs furnished from sketches on suggestions. Address

"ARTIST," BELVIDERE, LOWELL, MASS.

t.f.

THE NATIONAL AUTOMATIC CAS GOVERNOR.

33 Per Cent SAVING IN CAS BILLS GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

The American Architect and Building News for 1889.

THOSE who have subscribed for this journal during the last thirteen years should know about what will be its general character during the coming year, and it is only necessary to speak of particulars.

The illustrated papers on "Builders' Hardware" will probably be brought to a close before the middle of the year.

The papers on "Equestrian Monuments" will appear at frequent intervals during the entire year, as the attainable material promises to far exceed the limits first assumed.

The second volume of "Safe Building" will be begun early in the year, and the papers will be published with greater frequency than hitherto, so that it may appear in complete form at the earliest possible moment.

The extremely able and interesting accounts of "Italian Cities," by M. Honoré Mereu, who keeps in mind matters of historical as well as architectural interest, will appear at intervals.

Others of the temporarily interrupted series of papers will, it is hoped, be resumed during the year.

Of new material, the

Illustrated Life of Rodin,

the foremost of the French sculptors of the day, by Truman H. Bartlett, sculptor, will, to some, be the most prominent and generally interesting contribution. Mr. Bartlett writes with enthusiasm, and has obtained from M. Rodin facts and material for illustration that have not before been obtainable by any one.

To practising architects, however, and to draughtsmen, the most valuable contribution will be that made by Mr. A. B. Bibb, architect, on

"The Old Colonial Work of Virginia and Maryland,"

illustrated with cuts, measured drawings and gelatine prints.

The field of archæological inquiry will be represented by half a dozen papers by Mr. W. H. Goodyear, late curator in the Metropolitan Museum of Art, who here develops his recent discoveries relating to the

"Lotus in Ancient Art."

Further than this, Mr. Sylvester Baxter will contribute a series of papers on the

"Archæology of Arizona,"

which will give some account of the result of the Hemenway Expedition, and the work of Mr. Francis Cushing.

The instruction of students and draughtsmen has been considered in arranging for the publication of the papers on

"Architectural Shades and Shadows,"

by Mr. A. D. F. Hamlin, of the architectural department of Columbia College.

The interests of the perennial voyager and architectural traveller will find satisfaction in a series of

"Knockabout Papers"

by Mr. F. L. V. Hoppin, with many illustrations, both humorous and serious.

The general reader, no less than the architect, will find in the illustrated papers on travel in Spain, by Mr. F. A. Ober, much that is instructive historically, as well as of practical value from a professional point of view.

Occasional papers may be expected from the Rev. A. H. Noll, on Mexico; from the Countess von Krockow, on matters of foreign interest; from Mr. W. Watkiss Lloyd, on theoretical considerations of art and architecture. and from other well-known contributors.

The monthly contributions of domestic correspondence, which have proved so acceptable, will be continued and, we hope, expanded as fast as acceptable coadjutors declare themselves in now unrepresented fields.

Our programme is an unusually full one, and it is possible that the necessity of publishing papers on matters of current interest will not allow us to carry it out in its entirety.

It is always difficult to say anything about the illustrations. If the men who do the most interesting work do not care to have it published, or prefer to have it published elsewhere, we cannot, of course, have the pleasure of laying it before our readers; but, so far as it lies in our power, the illustrations will be as much above the average of those contained in previous volumes as circumstances will allow. In other respects, as to quantity, variety and quality, the illustrations published with the several editions will be as hitherto.

The publication of the valuable plates from

"Wickes's Gothic Towers and Spires"

will be continued, and there will also be published in the Imperial Edition a selection from the plates of Müller's

"Sketches of the Age of Francis I."

SUBSCRIPTION RATES.

Only two editions will, hereafter, be published, the Regular and the Imperial.

Regular Edition, in advance, per year, $6.00 | Imperal Edition, in advance, per year, $10.00

TICKNOR & CO., Publishers,

211 Tremont Street, Boston, Mass.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

	Regular Price.	Club Rate.
a. *American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
a[1]. *American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

	Regular Price.	Club Rate.
b. *American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
b[1]. *American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

	Regular Price.	Club Rate.
c. AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

c[1]. AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

	Regular Price.	Club Rate.
d. AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
d[1]. AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

THE CRITIC.

A Weekly Review of Literature and the Arts.

Bishop Potter always reads "The Critic."

I never read it — and, no matter how much driven, I never allow it to go unread — without a fresh conviction of its rare worth. It is so thoroughly just, so discriminating, so full of the atmosphere of a courageous, candid, and open-minded criticism, that one cannot but be proud and glad that so good and helpful a journal is winning its way to the wider recognition and esteem which it so abundantly deserves.

H. C. POTTER.

Mr. Whittier Finds It a Welcome Visitor.

I enclose three dollars for THE CRITIC for the coming year. I find it a welcome visitor.

JOHN G. WHITTIER.

Mr. Stedman Couldn't Get Along Without It.

We could not now get along very well without it. You maintain a high and impartial standard of criticism, and have brought out the talent of new and excellent writers.

EDMUND C. STEDMAN.

THE CRITIC has been the most noteworthy success in its way for years. It began brightly, and has never yet had a dull number..... To-day it is the most interesting journal of literary criticism in the country.—*Springfield Republican.*

Its success is a success of its methods, and these methods indicate a new departure for literary criticism in this country.—*Atlanta Constitution.*

At the head of the critical journals of this country. —*Boston Post.*

It ought to have its place on the table of every library in the country. —*The Christian Union.*

Its pages are full of the best literary criticism on this side of the Atlantic.—*New York Herald.*

Has earned a right to live by the excellence and variety of its materials.—*Harper's Monthly.*

By far the best journal of its class in the country. —*Buffalo Express.*

The first literary journal in America.—*London Academy.*

Ten Cents a Copy. $3.00 a Year.

Three *sample* copies sent, post-paid, for ten cents to any reader of *The American Architect.*

The Critic Co., 743 Broadway, New York.

The Durability of a Roofing Tin is the Test of its Value.

The following advertisement of an Insurance Company is in the October No. of *Scribner's Magazine*:

"When two brands of the same sort of goods are selling side by side in the market, one bringing double the price of the other, what is it that enables the former to find sale? Always, because it is worth that much more; because it will wear longer, do better service while it lasts, keep one satisfied with his purchase instead of kicking himself for a fool all the time he has it, be reliable at the sharpest emergency instead of liable to give out just when it is needed most, and the concern dealing in such goods *has* to charge more for them because it costs more to make them. * * * *"

This is most aptly illustrated in the case of Genuine Taylor "OLD STYLE" Brand of Roofing Plate.

WHY? **BECAUSE**

1.—It costs more to make.
2.—It is therefore worth more.
3.—It will wear longer and do better service.
4.—It will be reliable in the sharpest emergency, instead of giving out just when it is needed the most.
5.—It has been tried over a long number of years and never found wanting.
6.—It is the only brand of Roofing Tin that is imitated, and THEREFORE MUST BE GOOD.
7.—It has never failed to receive a contract against all competitors when tested by practical mechanics.
8.—It is sold at only a moderate profit on the cost.
9.—It does not trade upon the reputation of any other brand.
10.—It is sold under every guarantee that can be exacted.
11.—It is the only Roofing Tin that bears the name and address of the guarantor.
12.—It is therefore the only Plate that affords absolute security to property owners, architects and honest roofers.
13.—It is the only Plate that is stamped, not only with the brand, thickness, registered trade mark, but all with the name and address of the guarantor.

THERE ARE NO WASTERS OF THIS BRAND.

Paradoxical as it may seem the BEST ROOFING TIN IS THE CHEAPEST.

Those wanting THE BEST that can be made at any cost will use the Genuine Taylor "OLD STYLE" Brand, which is the only Roofing that can be offered under the above conditions.

N. & G. TAYLOR CO.,
Originators of Stamped and Guaranteed ROOFING PLATES,
Established 1810. PHILADELPHIA. 79th Year.

Hartman's Patent Inside Sliding Blind.
A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.
They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*
No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.
The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*
Agents wanted everywhere. Send for illustrated catalogue and prices to

COMPETITION.

CITY-HALL.
[At Lowell, Mass.]
Competitive sketches will be received up to **March 15, 1889**, for new City-Hall and Library Building for the City of Lowell, Mass.
For conditions of competition, plan of lot, etc., apply to the Mayor's office, Lowell, Mass.
681

COMPETITION.

SOLDIERS' MONUMENT.
[At Davenport, Ia.]
DAVENPORT, Ia., December 13, 1888.
Premiums of $500, $250, and $150 for drawings of plans for the Iowa Soldiers' Monument, to be erected by the State, are now offered by the Iowa Soldiers' Monument Commission.
For particulars apply to the undersigned, Secretary of said Commission at Davenport, Ia.
680 D. N. RICHARDSON.

PROPOSALS.

December 27, 1888. Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M., on the 12th day of January, 1889, for the labor and materials required in the erection and completion of the excavation, and pile and concrete foundations of the United States Post-Office, Court-House, etc., building at Charleston, S. C., in accordance with the specification and drawings, copies of which may be seen at this office; the office of the Superintendent; Builders' and Dealers' Exchange, Charleston, S. C.; Builders' Exchange, Baltimore, Md.; Mechanics', Dealers' and Lumbermen's Exchange, New Orleans, La.; Master Builders' Exchange, Philadelphia, Pa.; Virginia Mechanics' Institute, Richmond, Va., and Builders' and Traders' Exchange, Louisville, Ky. Each bid must be accompanied by a certified check for $100. The Supervising Architect will furnish a limited number of copies of the specification and drawings at $1 a set, upon receipt of that sum in post-office money-order, drawn to the order of the Treasurer of the United States. WILL. A. FRERET, Supervising Architect. 680

Proposals for iron buoys and appendages.—Office of Light-House Inspector, Third District, Tompkinsville, N. Y., December 24, 1888. (Post-office Box 2128, New York City.) Proposals will be received at this office until 1 o'clock P. M. on Tuesday, the 15th day of January, 1889, for furnishing to the light-house establishment iron buoys and appendages. The articles to be furnished embrace nun, can, and ice buoys, made of boiler-plate iron, shackles, swivels and chain, of wrought-iron, and iron and stone sinkers, all of which are enumerated in the specifications attached to the form of bid, which may be obtained on application to this office. Contracts will be awarded on each item separately, and bidders are required to state the time when they will agree to deliver the articles. The right is reserved to reject any or all bids, to strike out any item or items in the specifications, and to waive any defects. FREDERICK ROGERS, Commander, U. S. N., Light-House Inspector, Third District.
680

LOCKS AND KEYS.

[At Washington, D. C.]
POST-OFFICE DEPARTMENT,
WASHINGTON, D. C., November 22, 1888.

Sealed proposals will be received at this Department **until 12 o'clock, noon, on Friday, the first day of February, 1889**, for furnishing a new kind of mail locks and keys for the sole and exclusive use of the United States through registered mails.

As the public exposure and searching examination necessary to intelligent bidding on any prescribed model of a lock and key would tend to impair, if not entirely destroy, the further utility of such locks and keys for the purposes of the mails, the Postmaster-General prescribes no model or sample for bidders, but relies for a selection on the mechanical skill and ingenuity which a fair competition among inventors, hereby invited, may develop into samples submitted by them.

Specifications of the conditions and requirements relating to proposals, samples, contracts, etc., as well as forms of proposal, will be furnished on application by letter to the Second Assistant Postmaster-General.

No proposal will be considered unless it shall have been submitted in accordance with such specifications and forms.

The contracts which may be made will be in conformity to the specifications and the accepted proposal.

But the right is, however, reserved to reject any and all of the proposals.

DON M. DICKINSON,
680 Postmaster-General.

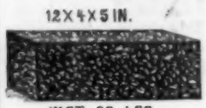
BARDSLEY'S
Pat. Checking Spring
HINGES
FOR
DOUBLE ACTING DOORS

They close the door absolutely without noise or violence, checking and stopping it at once in its proper position. All liability to accidents from violently swinging doors is entirely overcome. The mechanism is contained in a cylindrical casing which is let into the floor beneath the door. The casing is filled with a specially prepared, non-freezing oil which serves both as check and lubricant. Dust and dirt cannot enter. A large number of the hinges are in use and are giving the best satisfaction.

J. BARDSLEY,
59 ELM STREET, - NEW YORK.

ASPHALT PAVING BLOCKS AND TILES



For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

MATERIALS.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY
THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.
THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.
THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md.

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidab Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamder of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.

Union Spring Hinges
ARE
SIMPLE, EASILY SET
CANNOT BE PUT ON WRONG.

They work either way, right or left. All sizes. Single or double acting.

For Wire Screens or Light Doors they have no equal.

Send for Price List.

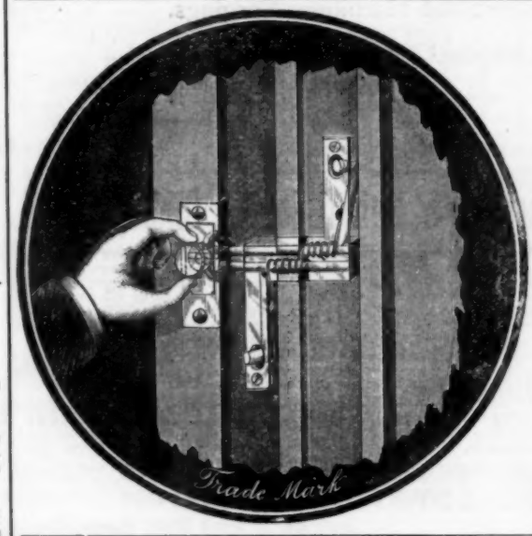
79 Chambers St., New York



THE
TIMBY BURGLAR-PROOF
SASH-LOCK
AND
VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

For Hydraulic Elevators, Town Water Supply or Railway service. Special Engines for Electric-Light work. Unequalled for running Elevators, Wood-Tools, or any kind of Machinery.

Guaranteed to consume 25 to 75 per cent less gas than any other Gas Engine doing the same work.

NORTON'S CEMENT

FOR CONCRETE.

Good Concrete of F. O. Norton's Cement is made of one part cement, two parts sand, three parts gravel, four parts chips, and is used in these proportions, for foundations, by the Officers of the Engineer Corps, U. S. Army.

The formula used by many Architects, and by the Engineers of the East River Bridge is—one part cement, two parts sand, four parts chips.

No Portland Cement, save, perhaps, a few barrels, was used in the foundations of that immense work, the approaches to the East River Bridge, but Concrete made of natural American Cement, chiefly F. O. Norton's was used as foundation for the towers and piers throughout. Both the Caissons, supporting the towers on either side of the river, were filled with Concrete made from F. O. Norton's Cement.

F. O. NORTON,

92 BROADWAY, - NEW YORK

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'
English Shingle Stain.

A. B. RICH, Agent,
Office, D. B. CROCKETT CO.,
84 William Street, - NEW YORK.

FELTON, RAU & SIBLEY,
Agents,
PHILADELPHIA, PA.

H. M. HOOKER, Agent,
57 W. Randolph St.,
CHICAGO, ILL.

OUR STAINS are made from the best English Colors and pure Linseed oil with a small proportion of petroleum which serves to preserve the wood as well as the color. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas, is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 260,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

NOTICE!
We desire to notify purchasers of Steam-Pumps that numerous cheap imitations of Worthington Pumps are being manufactured. It is usually represented that they are made by us or from our patterns, and being apparently close copies, they readily deceive those who are not familiar with our machines. By this method some of them have been introduced and as their construction is invariably of inferior quality the unsuspecting buyer is imposed upon and suffers correspondingly.
We therefore call special attention to the existence of these imitations and to the fact that our machinery is conspicuously marked with our trade name, the use of which by any other manufacturer is unauthorized and illegal.
HENRY R. WORTHINGTON.

WILL YOUR WINTER BE AS PLEASANT
as the summer you have so much enjoyed?

The Novelty Furnace

will fill your house with the same warm pleasant balmy atmosphere that has made the past season delightful.

Absolutely free from gas.
No dust in the hot-air pipes.
Servants run them successfully.

Moderate in cost. Moderate in consumption.
Peculiar construction. Great durability.

IMMENSE HEATING POWER.

The large heating-surface exposed by the peculiar arrangement, enables it to constantly afford a large volume of healthfully warmed fresh air which is perfect ventilation.

The manner in which the gases are retained and the indirect passage they are forced to make extracts their principal heat endowing the furnace with

EXTRAORDINARY ECONOMICAL QUALITIES.

Pure Ready-Mixed Paints

We desire to call attention of consumers to the fact that we guarantee our ready-mixed paints to be made only of pure linseed oil and the most permanent pigments. They are not "Chemical," "Rubber," "Patent," or "Fire-proof." We use no secret or patent method in manufacturing them by which benzine and water are made to serve the purpose of pure linseed-oil.

PAGE STEAM HEATER

See last week's issue for particulars.

PAGE STEAM HEATING CO., NORWICH, CONN.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent SAVING IN GAS BILLS GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

The Union National Gas Saving Co., 744 BROADWAY, NEW YORK.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of Mr. George Hayes on page iii. This gentleman first placed his advertisement in this journal, February 12, 1876, and has kept it ever since that time before our readers. An advertising connection of such length bears indirect testimony to the value of the goods, as the advertising of unprofitable wares is usually of short duration.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

ADDRESS

Editors of the American Architect,
211 Tremont Street, Boston, Mass.

Are You Building or Remodelling?

SPURR'S NATURAL WOOD VENEERS.

SPURR'S PATENT WOOD CARVINGS.

WE can give your new house an elegant hardwood finish at moderate cost with our VENEERS — lasting and beautiful. In remodelling your old home, do not tear out your painted woodwork. Let us transform it into a hardwood finish with our VENEERS.

OUR patent Wood Carvings are used by many architects in connection with solid woodwork. Can be had in a large variety of designs, and are indistinguishable from hand-carving.

WORKMEN SENT ANYWHERE.

Views of interiors finished by us, with descriptive circulars, sent upon application.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
a[1].	*American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

		Regular Price.	Club Rate.
b.	*American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
b[1].	*American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

		Regular Price.	Club Rate.
c.	AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

c[1].	AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

		Regular Price.	Club Rate.
d.	AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
d[1].	AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

THE AMERICAN ARCHITECT AND BUILDING NEWS

WITH

Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.	Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.

Home Sanitation,

A Manual for Housekeepers, by the Sanitary Science Club of the Association of Collegiate Alumnæ. Edited by ELLEN H. RICHARDS and MARION TALBOT. Cloth. . . . . 50 cents.

THE object of this manual is to arouse the interest of housekeepers in the sanitary condition of their homes, and to indicate the points requiring investigation, the methods of examination, and the practical remedies. The subjects treated are the Situation of the House, care of the Cellar, Plumbing and Drainage, Ventilation, Heating, Lighting, Furnishing, Clothing, Food, and Drink. Each topic is introduced by an explanatory statement, which is followed by a series of questions so framed that an affirmative answer implies a satisfactory arrangement; and they also suggest a remedy if the answer is negative.

JAPANESE HOMES
And Their Surroundings

By EDWARD S. MORSE, Ph.D., late Professor at the Tokio University, Japan, etc. With 307 Illustrations. 8vo, richly bound, $5.00; in half-calf, $9.00.

"For cultivated people having tastes which lead them to take pleasure in beautifying their homes and surroundings, we know of no other publication so brimful of suggestion and valuable information as this handsome and profusely-illustrated volume." — *Scientific American.*

TICKNOR & CO., Boston, Mass.

PROPOSALS.

when the Committee directs, a group of infantry soldiers called the "Color Guard," composed of nine figures, each about 7′ 6″ high, mounted on a base or plinth 7 feet by 19 feet.

Bids to be endorsed "Proposals for Bronze Statuary," and addressed to the care of Levi F. Bauder, Secretary of the Board of Commissioners, Wick Block, Cleveland, O.

The plaster models can be seen at the studio on Rockwell Street, Cleveland, in rear of the City-Hall, where a member of the Committee will give any additional information if desired, or by addressing Levi T. Scofield, architect, 22 Case Building, Cleveland, O.

Each bid to be accompanied with a written guarantee, signed by two responsible sureties.

The Commissioners reserve the right to reject any or all bids, to accept or decline to close a contract, as in their discretion they shall deem it their duty to do.

The time for completion and delivery of castings mounted must be stated, and will be considered in awarding the contract.

Bids will only be received for first-class standard statuary bronze and first-class workmanship.

Payments will be made monthly, retaining 10 per cent until the contract is completed.

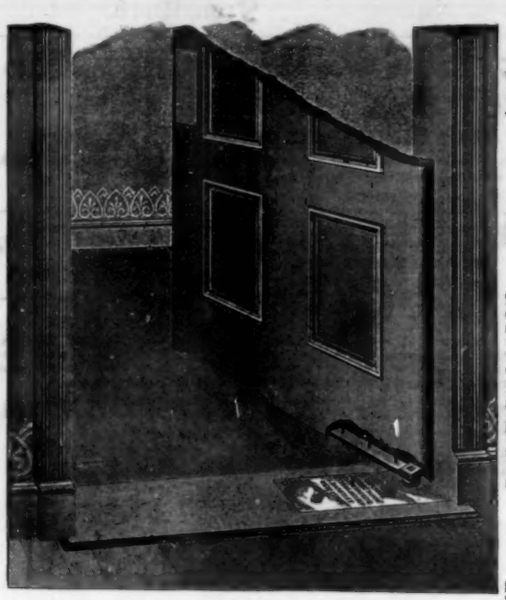
Requires no Ventilation.

The Surest protection against Sewer Gas. Is endorsed by all Architects as being the best Trap in the market.

Manufactured only by the
BOSTON & LOCKPORT BLOCK CO.
162 Commercial St., BOSTON, MASS.
For Sale by the Plumbers' Trade Generally.



BARDSLEY'S
Pat. Checking Spring HINGES
FOR
DOUBLE ACTING DOORS

They close the door absolutely without noise or violence, checking and stopping it at once in its proper position. All liability to accidents from violently swinging doors is entirely overcome. The mechanism is contained in a cylindrical casing which is let into the floor beneath the door. The casing is filled with a specially prepared, non-freezing oil which serves both as check and lubricant. Dust and dirt cannot enter. A large number of the hinges are in use and are giving the best satisfaction.

J. BARDSLEY,
59 ELM STREET, - NEW YORK.

ASPHALT PAVING BLOCKS AND TILES

For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

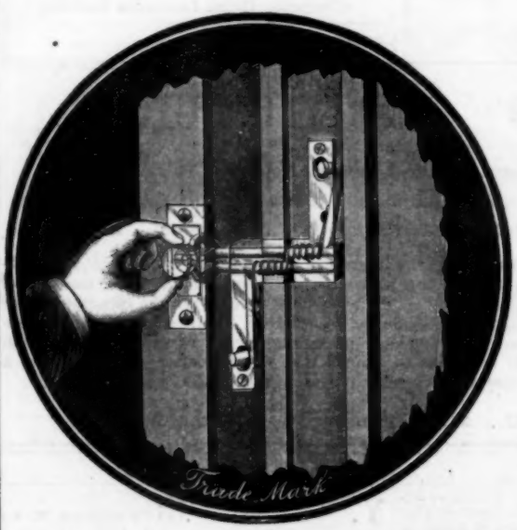
MATERIALS.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY
THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.
THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.
THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md.

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidad Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamber of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.



THE
TIMBY BURGLAR-PROOF SASH-LOCK
AND
VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

Sanitary Appliances

THE BOWER

SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

B. P. BOWER & CO.,

Manufacturers,

Cleveland, - Ohio.

Protect yourselves against Sewer Gas and Back Water by using

The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.

Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.

Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe

HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on application.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an Iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

"THE CAST SINK MUST GO."

THE COLUMBUS WROUGHT STEEL KITCHEN AND PANTRY

Displaces all others wherever introduced — **SINKS** — Painted, Galvanized, Enameled

WESTERLY, - - - R. I.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'
English Shingle Stain.

A. B. RICH, Agent,
Office, D. R. CROCKETT CO.,
84 William Street, - NEW YORK.

FELTON, RAU & SIBLEY,
Agents,
PHILADELPHIA, PA.

H. M. HOOKER, Agent,
57 W. Randolph St.,
CHICAGO, ILL.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

BOSTON, MASS.

Best Conductor of all.
RITCHIE'S
Corrugated Expanding
Conductor.

Guaranteed no Infringement.

This pipe has all the advantages of other corrugated conductors in not bursting from freezing, and in addition:

It has no soldered joints.

The enlarged coupling makes the conductor of even size inside throughout.

It is galvanized, after formation, great care being taken to secure a smooth coating of zinc free from dross and impurities.

Modern Perspective.

A Treatise upon the Principles and Practice of Plane and Cylindrical Perspective.

AN INVALUABLE BOOK FOR ARTISTS, ARCHITECTS, DRAUGHTSMEN AND CIVIL ENGINEERS.

— BY —

WILLIAM R. WARE,

Professor of Architecture in the School of Mines, Columbia College.

1 vol. 12mo. 321 pages, with 27 plates in a Portfolio - - - - - - - - - $5.00

This is by far the most exhaustive of modern works on the subjects relating to perspective, plain and panoramic, and will be of great value to all architects and artists, and others interested in the problems of art. The scientific and pictorial aspects of these investigations are carefully and thoroughly considered, both independently and in their connection with drawing; and the propositions of the author are illustrated by plates of architectural objects and perspective plans.

"The book is written in clear English, free from unnecessary technicalities, and in a much more felicitous style than such text-books usually are. The plates require a prodigious quantity of careful work, and are correspondingly valuable."—*New York World.*

Giant Metal Sash Chain.

MADE ONLY BY
THE SMITH & EGGE MANUFACTURING CO.,
BRIDGEPORT, CONN.

The most reliable and economical article in the market for the purpose. GREAT TENSILE STRENGTH Does not corrode; does not lose its vitality by continuous use, or exposure to the elements; runs over any pulley, and gives satisfaction wherever it is used. Fixtures made of steel wire, is very simple and easily applied. Prices very low. Samples sent to any architect in the United States, free, on application. Now in use in State House, Hartford; Providence City Hall; Singer Building, Chicago; J. C. Flood's, Menlo Park, Cal.; Vanderbilt and Florence Flats, New York; Boreel Building, New York; new State War and Navy Department, and Patent Office, Washington, D. C.; *Herald* Building, Boston, and very many other fine buildings in all parts of the United States

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE CELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH."

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.

This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

Are You Building or Remodelling?

SPURR'S NATURAL WOOD VENEERS.

SPURR'S PATENT WOOD CARVINGS.

WE can give your new house an elegant hardwood finish at moderate cost with our VENEERS—lasting and beautiful. In remodelling your old home, do not tear out your painted woodwork. Let us transform it into a hardwood finish with our VENEERS.

OUR patent Wood Carvings are used by many architects in connection with solid woodwork. Can be had in a large variety of designs, and are indistinguishable from hand-carving.

WORKMEN SENT ANYWHERE.

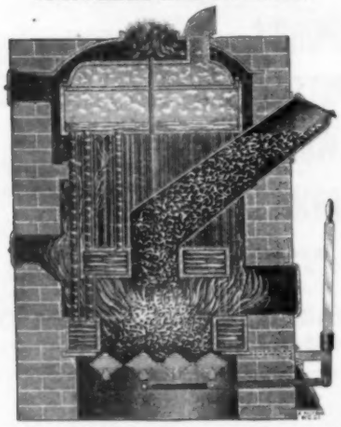
THE BRONSON BOILER

For Steam and Hot-Water Heating. Automatic and Reliable.



With BRICK or IRON Settings, as you may prefer, The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞ We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. ---

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent SAVING IN GAS BILLS GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

IMITATION.

AN ACKNOWLEDGMENT OF SUPERIORITY.

The best evidence that the JENKINS BROS. VALVES, JENKINS STANDARD PACKING, and JENKINS DISCS have extraordinary merit, and are held in high esteem by the public, is that they are being *imitated* and *counterfeited*. The imitations resemble the original in appearance only; they lack the general excellence of the genuine. Our friends and customers will sustain us in our endeavor to manufacture the best goods, by not accepting any goods unless stamped as above. This notice has become necessary by the fraudulent use of our name, and to protect the public from being deceived — by unprincipled parties placing imitations on the market.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of Messrs. Miller & Coates on page iii. These gentlemen first placed an advertisement in this journal, February 19, 1876, and have kept it ever since that time before our readers. During the greater part of this time they have elected to advertise mainly their large line of tiles so that few of our readers have learned through this medium that they also carry a very excellent line of plumbing specialties.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

WANTED.

EMPLOYMENT. — Wanted, by draughtsman, employment in New York City; has three years' experience in office-work, can make drawings from rough sketches, and is thoroughly acquainted with perspective. Address "R.," 68 Evergreen Place, East Orange, N. J. 682

WANTED.

"The American Architect Scholarship."

THE

TRAVELLING-SCHOLARSHIP

ESTABLISHED BY THE

American Architect and Building News

IS open only to subscribers to the Imperial Edition of that journal (without distinction of sex or color) who may dwell in any part of the United States, under the following general conditions:

1. The applicant must be a citizen of the United States.
2. Subscription to the Imperial Edition must be prepaid *in full* direct to the publishers.
3. At the time of filing notice of intention to compete, the applicant must be between the ages of twenty and twenty-five years. It is desirable that notice should be filed with the editors before May 15, 1889.
4. The applicant must have served for at least two years in offices of members of the American Institute of Architects, or of the Western Association of Architects. A graduate's diploma granted by a technical school will be accepted in lieu of one of these years' of office-work.
5. Applicants must undergo examination in:
   - *a.* Drawing — free-hand and mechanical.
   - *b.* Architectural Design.
   - *c.* Elements of Construction.
   - *d.* History of Architecture.
   - *e.* English Composition.
   - *f.* One Foreign Language.
   - *g.* Elements of Sanitation, Heating and Ventilating.

   The exact date and place of examination will be announced later.
6. An examination fee of $5.00 for the benefit of the examiners will be required.
7. The appointee must take his departure within six weeks of receiving notice of appointment. One hundred dollars will be paid to him at the time of taking ocean passage and the balance of the scholarship in monthly instalments.
8. The course of travel and study while abroad will be outlined by the editors of the *American Architect.*

December 22, 1888.

TICKNOR & COMPANY, Publishers,

211 Tremont Street, Boston.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

*a*¹. *American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

	Regular Price.	Club Rate.
b. *American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
*b*¹. *American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

	Regular Price.	Club Rate.
c. AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00
*c*¹. AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

	Regular Price.	Club Rate.
d. AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
*d*¹. AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

Discourses on Architecture.

By EUGENE EMANUEL VIOLLET-LE-DUC. 2 vols. 8vo. Richly and copiously illustrated, with 37 steel plates and over 200 wood-cuts, many of which are full-page. $15.00. A new edition of this noble classic of architecture and æsthetics.

"While it will be greatly prized by professional architects in the United States, its literary merits are of such a high order as to commend it to all persons of taste and culture. We can do but the faintest justice to its philosophical depth, historical research, professional ability, critical taste and bright originality." — *Chicago Inter-Ocean.*

"It discusses the grounds and history of architecture as an art, with copious illustrations of the various schools and methods of architecture, and is written in a noble and agreeable manner — less piquant than that of Ruskin, but also less fantastic and more practical." — *Springfield Republican.*

"For anybody who really cares to know about architecture, these 'Discourses' may confidently be recommended as forming the best help he can get in English." — *New-York World.*

"We have no hesitation in saying, deliberately, and without qualification, that no work of anything like equal value to American architects has ever been published in this country — none from the study of which they and all lovers of art may derive so many, so durable and so important lessons for the elevation and perfection of their art." — *New-York Christian Intelligencer.*

TICKNOR & CO., Boston.

The Durability of a Roofing Tin is the Test of its Value.

The following advertisement of an Insurance Company is in the October No. of *Scribner's Magazine*:

"When two brands of the same sort of goods are selling side by side in the market, one bringing double the price of the other, what is it that enables the former to find sale? Always, because it is worth that much more; because it will wear longer, do better service while it lasts, keep one satisfied with his purchase instead of kicking himself for a fool all the time he has it, be reliable at the sharpest emergency instead of liable to give out just when it is needed most, and the concern dealing in such goods *has* to charge more for them because it costs more to make them. * * * *"

This is most aptly illustrated in the case of Genuine Taylor "OLD STYLE" Brand of Roofing Plate.

WHY? BECAUSE

1.—It costs more to make.
2.—It is therefore worth more.
3.—It will wear longer and do better service.
4.—It will be reliable in the sharpest emergency, instead of giving out just when it is needed the most.
5.—It has been tried over a long number of years and never found wanting.
6.—It is the only brand of Roofing Tin that is imitated, and THEREFORE MUST BE GOOD.
7.—It has never failed to receive a contract against all competitors when tested by practical mechanics.
8.—It is sold at only a moderate profit on the cost.
9.—It does not trade upon the reputation of any other brand.
10.—It is sold under every guarantee that can be exacted.
11.—It is the only Roofing Tin that bears the name and address of the guarantor.
12.—It is therefore the only Plate that affords absolute security to property owners, architects and honest roofers.
13.—It is the only Plate that is stamped, not only with the brand, thickness, registered trade mark, but all with the name and address of the guarantor.

THERE ARE NO WASTERS OF THIS BRAND.

Paradoxical as it may seem the BEST ROOFING TIN IS THE CHEAPEST.

Those wanting THE BEST that can be made at any cost will use the Genuine Taylor "OLD STYLE" Brand, which is the only Roofing that can be offered under the above conditions.

N. & C. TAYLOR CO.,
Originators of Stamped and Guaranteed ROOFING PLATES,

Home Sanitation,

A Manual for Housekeepers, by the Sanitary Science Club of the Association of Collegiate Alumnæ. Edited by ELLEN H. RICHARDS and MARION TALBOT. Cloth. . . . . 50 cents.

THE object of this manual is to arouse the interest of housekeepers in the sanitary condition of their homes, and to indicate the points requiring investigation, the methods of examination, and the practical remedies. The subjects treated are the Situation of the House, care of the Cellar, Plumbing and Drainage, Ventilation, Heating, Lighting, Furnishing, Clothing, Food, and Drink. Each topic is introduced by an explanatory statement, which is followed by a series of questions so framed that an affirmative answer implies a satisfactory arrangement; and they also suggest a remedy if the answer is negative.

TICKNOR & CO., 211 Tremont Street, Boston, Mass.

JAPANESE HOMES

And Their Surroundings

By EDWARD S. MORSE, Ph.D., late Professor at the Tokio University, Japan, etc. With 307 Illustrations. 8vo, richly bound, $5.00; in half-calf, $9.00.

"For cultivated people having tastes which lead them to take pleasure in beautifying their homes and surroundings, we know of no other publication so brimful of suggestion and valuable information as this handsome and profusely-illustrated volume." — *Scientific American.*

TICKNOR & CO., Boston, Mass.

PROPOSALS.

BRONZE CASTINGS.

[At Cleveland, O.]

OFFICE OF THE EXECUTIVE COMMITTEE OF THE BOARD OF COMMISSIONERS, CUYAHOGA COUNTY, SOLDIERS' AND SAILORS' MONUMENT, CLEVELAND, O., January 3, 1889.

Sealed proposals will be received by the Executive Committee **until 12 o'clock M. on Wednesday, January 23, 1889,** from bronze founders actually engaged in the business, for the bronze castings and other work pertaining thereto, to wholly complete and set in place on the site selected in Cleveland, O., when the Committee directs, a group of infantry soldiers called the "Color Guard," composed of nine figures, each about 7′ 6″ high, mounted on a base or plinth 7 feet by 19 feet.

Bids to be endorsed "Proposals for Bronze Statuary," and addressed to the care of Levi F. Bauder, Secretary of the Board of Commissioners, Wick Block, Cleveland, O.

The plaster models can be seen at the studio on Rockwell Street, Cleveland, in rear of the City-Hall, where a member of the Committee will give any additional information if desired, or by addressing Levi T. Scofield, architect, 22 Case Building, Cleveland, O.

Each bid to be accompanied with a written guarantee, signed by two responsible sureties.

The Commissioners reserve the right to reject any or all bids, to accept or decline to close a contract as in their discretion they shall deem it their duty to do.

The time for completion and delivery of castings mounted must be stated, and will be considered in awarding the contract.

Bids will only be received for first-class standard statuary bronze and first-class workmanship.

Payments will be made monthly, retaining 10 per cent until the contract is completed.

WM. J. GLEASON, Chairman,
JAMES BARNETT,
JAMES HAYR,
J. B. MOLYNEAUX,
LEVI T. SCOFIELD,
682 Executive Committee.

Y. M. C. A. BUILDING.

[At Providence, R. I.]

PROVIDENCE, R. I., January 7, 1889.

Sealed proposals for the erection of the Y. M. C. A. Building, on the corner of Westminster and Jackson Streets, Providence, R. I., will be received **until 12 M., Monday, February 4, 1889,** at the office of Stone, Carpenter & Willson, architects, 65 Westminster Street, where the plans and specifications may be seen and information obtained by bidders.

The right to reject any and all bids is reserved.

Manufactured only by the

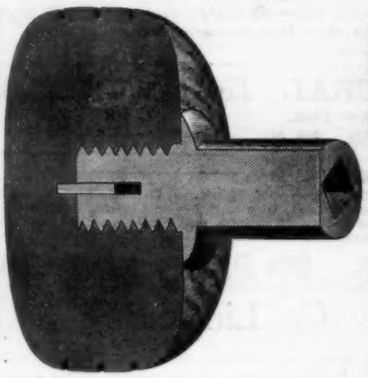
BOSTON & LOCKPORT BLOCK CO.

163 Commercial St., BOSTON, MASS.

For Sale by the Plumbers' Trade Generally.

BARDSLEY'S

Patent Wood Door Knobs



Wood Knobs, if carefully made of selected and thoroughly dried material, of tasteful design, beautifully and durably finished and put together so that there is no possibility of the knobs coming loose from the shanks, make the best and most desirable knobs for interior doors; as they are pleasing to the eye, pleasant to the hand and are made to harmonize with the surrounding woodwork. We confidently offer the Knobs of this make as meeting all these requirements. We warrant every Knob not to come loose or give out in any way. The engraving represents our latest improved and patented method of fastening the shanks to the heads. Not a single Knob with this fastening has come loose. These are the only Wood Knobs in the market having a patented fastening, all others are merely screwed on, and are liable to come loose at any time. Architects are warned that certain dealers to save a few cents a dozen, have been substituting a very inferior imitation, where these goods have been specified; none should be accepted unless the makers' name is on the box. Price list on application.

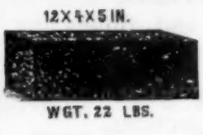
ASPHALT PAVING BLOCKS AND TILES



For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

Materials.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY

THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.

THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.

THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md.

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidad Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamber of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.

THE

TIMBY BURGLAR-PROOF SASH-LOCK

— AND —

VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

Decennial Index of Illustrations

IN THE

American Architect and Building News.

1876 to 1885. 1 vol. 8vo. . . . $2.00

A carefully-made topical index to the thousands of illustrations printed in "The American Architects" for the past ten years, with the architects and costs of the buildings illustrated. These include Sketches, Etchings, General Views; Towers and Spires; Monuments, Statues, and Tombs; Interiors and Furniture; Entrances and Gateways; Educational, Mercantile, and Public Buildings; Churches and Parish-buildings; Dwellings; Club-Houses; Theatres, Stables, and Farm-Buildings; Hotels, Museums, Libraries, and Town-Halls.

TICKNOR & COMPANY.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'
English Shingle Stain.

A. B. RICH, Agent,
Office, D. B. CROCKETT CO.,
84 William Street, - NEW YORK.

FELTON, RAU & SIBLEY,
Agents,
PHILADELPHIA, PA.

H. M. HOOKER, Agent,
57 W. Randolph St.,
CHICAGO, ILL.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any "*gas oil*" or "*dead oil*" which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

MAIN OFFICE:

1705 Chestnut Street, Philadelphia, Pa

For sale by all Jobbers and Dealers in Tinners' Supplies throughout the country.

Correspondence Solicited, and Lowest Prices Guaranteed.

THE ONLY REAL

EXPANDING CONDUCTOR.

THE IRWIN & REBER

PATENT

EXPANDING WATER CONDUCTOR.

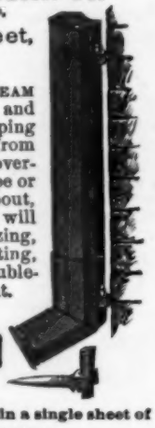
MANUFACTURED BY THE

S. S. S. Conductor Co.

LIMITED,

163 Lacock Street,

ALLEGHENY, PA.



THE STANDING SEAM allows of an easy and secure fastening, keeping the pipe far enough from the wall to make any overflow from the eave pipe or head, run down the spout, and not the wall; and will open, in case of freezing, so as to prevent bursting, and still remain double-locked and water-tight.

Made in 6-foot lengths, in a single sheet of

SOFT STEEL,

Either Galvanized, Kalameined or Leaded.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas, is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 200,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

NOTICE!
We desire to notify purchasers of Steam-Pumps that numerous cheap imitations of Worthington Pumps are being manufactured. It is usually represented that they are made by us or from our patterns, and being apparently close copies, they readily deceive those who are not familiar with our machines. By this method some of them have been introduced and as their construction is invariably of inferior quality the unsuspecting buyer is imposed upon and suffers correspondingly.
We therefore call special attention to the existence of these imitations and to the fact that our machinery is conspicuously marked with our trade name, the use of which by any other manufacturer is unauthorized and illegal.
HENRY R. WORTHINGTON.

Welded Chrome Steel and Iron. (5 ply).

WILL YOUR WINTER BE AS PLEASANT
as the summer you have so much enjoyed?

The Novelty Furnace

will fill your house with the same warm pleasant balmy atmosphere that has made the past season delightful.

Absolutely free from gas.
No dust in the hot-air pipes.
Servants run them successfully.

Moderate in cost. Peculiar construction. Moderate in consumption. Great durability.

IMMENSE HEATING POWER.

The large heating-surface exposed by the peculiar arrangement, enables it to constantly afford a large volume of healthfully warmed fresh air which is perfect ventilation.

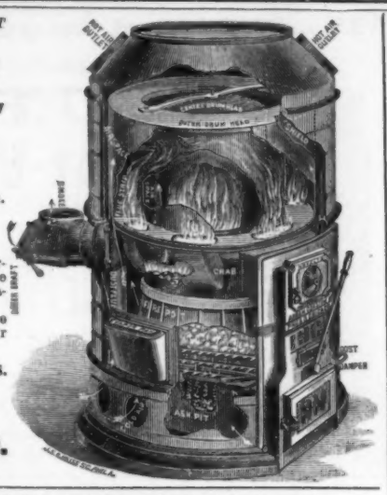
The manner in which the gases are retained and the indirect passage they are forced to make extracts their principal heat endowing the furnace with

EXTRAORDINARY ECONOMICAL QUALITIES.

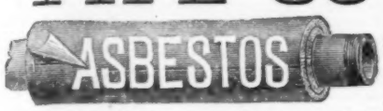
Send for descriptive pamphlet.

Correspondence carefully attended.

ABRAM COX STOVE CO.
Philadelphia. Chicago.



PIPE-COVERING.



This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Pure Ready-Mixed Paints

We desire to call attention of consumers to the fact that we guarantee our ready-mixed paints to be made only of pure linseed oil and the most permanent pigments. They are not "Chemical," "Rubber," "Patent," or "Fire-proof." We use no secret or patent method in manufacturing them by which benzine and water are made to serve the purpose of pure linseed-oil.

Sample cards, containing fifty desirable shades sent on application.

THE BRONSON BOILER
For Steam and Hot-Water Heating.
Automatic and Reliable.

With BRICK or IRON Settings, as you may prefer, The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞ We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. **Reliable Agents Wanted.** Send for Illustrated Catalogue and Price List.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

The Union National Gas Saving Co.,
744 BROADWAY, NEW YORK.

Are You Building or Remodelling?

SPURR'S NATURAL WOOD VENEERS.

WE can give your new house an elegant hardwood finish at moderate cost with our VENEERS—lasting and beautiful. In remodelling your old home, do not tear out your painted woodwork. Let us transform it into a hardwood finish with our VENEERS.

SPURR'S PATENT WOOD CARVINGS.

OUR patent Wood Carvings are used by many architects in connection with solid woodwork. Can be had in a large variety of designs, and are indistinguishable from hand-carving.

WORKMEN SENT ANYWHERE.

50 BEEKMAN STREET,

NEW YORK.

WARREN'S "COMPOSITE" FELT,

For Roof Foundations.

A two-ply, composed of one layer of saturated Felt and one of manilla-rope paper with a layer of cement between. Combines durability and strength with lightness and pliability, and is *absolutely* impervious to moisture. *For use under slate, shingles*, etc., it is especially valuable, since as soon as the sun comes upon the roof, the cement contained in the sheathing closes tightly around the nails that have been driven through it, and form of the sheathing itself a complete waterproof covering. It is four and one-half times stronger than ordinary roofing.

Send for Samples and Circular No. 12.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of The National Fire Art Foundry on page iii. This establishment first placed an advertisement in this journal, March 4, 1876, and has kept it ever since that this time before our readers. Although rather a specialty is made of monumental statuary, this foundry possesses facilities for casting bronze work of any kind.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

WANTED.

DRAUGHTSMAN.—An architectural draughtsman who can make scale or detail drawings from sketches. In answering state age, wages desired, experience and architects for whom you have worked. Address, 31 Blackstone Building, Cleveland, O. 684

"The American Architect Scholarship."

THE

TRAVELLING-SCHOLARSHIP

ESTABLISHED BY THE

American Architect and Building News

IS open only to subscribers to the Imperial Edition of that journal (without distinction of sex or color) who may dwell in any part of the United States, under the following general conditions:

1. The applicant must be a citizen of the United States.
2. Subscription to the Imperial Edition must be prepaid *in full* direct to the publishers.
3. At the time of filing notice of intention to compete, the applicant must be between the ages of twenty and twenty-five years. It is desirable that notice should be filed with the editors before May 15, 1889.
4. The applicant must have served for at least two years in offices of members of the American Institute of Architects, or of the Western Association of Architects. A graduate's diploma granted by a technical school will be accepted in lieu of one of these years' of office-work.
5. Applicants must undergo examination in:
   - *a.* Drawing — free-hand and mechanical.
   - *b.* Architectural Design.
   - *c.* Elements of Construction.
   - *d.* History of Architecture.
   - *e.* English Composition.
   - *f.* One Foreign Language.
   - *g.* Elements of Sanitation, Heating and Ventilating.

   The exact date and place of examination will be announced later.
6. An examination fee of $5.00 for the benefit of the examiners will be required.
7. The appointee must take his departure within six weeks of receiving notice of appointment. One hundred dollars will be paid to him at the time of taking ocean passage and the balance of the scholarship in monthly instalments.
8. The course of travel and study while abroad will be outlined by the editors of the *American Architect.*

December 22, 1888.

TICKNOR & COMPANY, Publishers,

211 Tremont Street, Boston.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
a[1].	*American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

		Regular Price.	Club Rate.
b.	*American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
b[1].	*American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

		Regular Price.	Club Rate.
c.	AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

c[1].	AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

		Regular Price.	Club Rate.
d.	AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
d[1].	AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

THE AMERICAN ARCHITECT AND BUILDING NEWS

WITH

Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.	Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.

THE BEST PREPARATION FOR HOUSEKEEPING IS A
WIRE GAUZE DOOR
As used Exclusively in the New Hub Range.

PERFECT COOKING
Is the most important item in the domestic economy. By using the Wire Gauze Oven Door with the new Hub Range, the skill of the cook is supplemented by the most perfect cooking apparatus ever made.
Three of the Hub Ranges with Wire Gauze Oven Doors are in constant use at the famous Boston Cooking-School, and are endorsed by them as being better than all others. Insist on your dealer giving you the new Hub Range. It is the very highest grade of cooking apparatus made, and when quality is considered is the lowest in price of any in the market. Over 100,000 Hub Ranges in use. The Hub line of goods are world renowned, and are sold by dealers everywhere. Special circulars sent on application.

PROPOSALS.

PROPOSALS FOR DREDGING. United States Engineer Office, Cleveland, O., January 9, 1889. Sealed proposals, in duplicate, will be received at this office until 12 o'clock M., on Tuesday, the 29th day of January, 1889, and then opened, for excavating 920,000 cubic yards, more or less, of material from Maumee Bay along line of proposed straight channel for Toledo Harbor, O. Preference will be given to materials and plant of domestic production or manufacture, conditions of quality and price (import duties included) being equal. The attention of bidders is invited to Acts of Congress approved February 26, 1885, and February 23, 1887, Vol. 23, page 332, and Vol. 24, page 414, statutes at large. All information can be obtained at this office. The United States reserves the right to reject any or all proposals. L. COOPER OVERMAN, Major of Engineers. 683

OFFICERS' QUARTERS.
[At Fort Monroe, Va.]
FORT MONROE, January 14, 1889.

Sealed proposals, in triplicate, subject to the usual conditions, will be received at this office **until 12 o'clock M., February 14, 1889,** and then opened, for the construction of three double sets of officers' quarters at Fort Monroe, Va.

All information furnished by this office upon application.

The United States reserves the right to reject any or all proposals.

Envelopes containing proposals should be marked "Proposals for Officers' Quarters," and addressed to CHARLES BIRD,
Captain and Assistant Quartermaster, U. S. Army.
684

METAL WORK.
[At Maryland Shore.]
OFFICE OF THE LIGHT-HOUSE ENGINEER, FIFTH AND SIXTH DISTRICT,
BALTIMORE, MD., January 19, 1889.

Sealed proposals will be received at this office **until 12 M., of Wednesday, the 13th day of February, 1889,** for furnishing the materials of all kinds necessary for the completion and delivery of the metal work of the Holland's Island Bar, Md., and Great Wicomico River, Va., Light-Houses.

Plans, specification, forms of proposal and other information may be obtained on application to this office.

The right is reserved to reject any and all bids, and to waive any defects.

J. C. MALLERY,
Captain of Engineers, U. S. Army, Light-House Engineer, Fifth and Sixth Districts.
685

Y. M. C. A. BUILDING.
[At Providence, R. I.]
PROVIDENCE, R. I., January 7, 1889.

Sealed proposals for the erection of the Y. M. C. A. Building, on the corner of Westminster and Jackson Streets, Providence, R. I., will be received **until 12 M., Monday, February 4, 1889,** at the office of Stone, Carpenter & Willson, architects, 65 Westminster Street, where the plans and specifications may be seen and information obtained by bidders.

The right to reject any and all bids is reserved.

G. W. R. MATTESON,
BENJAMIN F. ARNOLD,
A. B. MCCRILLIS,
H. N. CAMPBELL, JR.,
EUGENE W. MASON,
} Committee on Plans.

SCHOOL FURNITURE.
[At Washington, D. C.]
WASHINGTON, D. C., January 16, 1889.

Sealed proposals will be received at the office of the Commissioners of the District of Columbia till **Friday, February 1, at 12 o'clock, noon,** for furnishing to the public schools of the District of Columbia the following described school furniture, viz.: 352 No. 1 Grammar School desks and chairs, more or less; 572 No. 2 Grammar School desks and chairs, more or less; 708 No. 3 Grammar School desks and chairs, more or less; 408 No. 4 Grammar School desks and chairs, more or less; 60 No. 4 Primary School desks and chairs, more or less; 385 No. 5 Primary School desks and chairs, more or less; 70 teachers' desks and chairs, more or less; 51 teachers' tables and chairs, more or less.

Samples must be submitted with bids.

The bids for pupils' desks must be for the desk and chair pattern only, and prices must include the furnishing and setting to the floors in the different school buildings.

The furniture must be delivered and set to the floors on or before July 1, 1889.

WILLIAM B. WEBB,
SAMUEL E. WHEATLEY,
CHARLES W. RAYMOND,
Commissioners of the District of Columbia.
683

PROPOSALS.

ELECTRIC LIGHTING.
[At St. Louis, Mo.]
OFFICE OF THE BOARD OF PUBLIC IMPROVEMENTS,
ST. LOUIS, MO., January 8, 1889.

Sealed proposals for the public work hereinafter mentioned will be received at the office of the Board of Public Improvements of the city of St. Louis, Mo., **until 12 A. M. of the 28th day of February, 1889,** at which hour they will be publicly opened and read, viz.:

For lighting with electricity for the term of ten years from January 1, 1890, the streets, public places, and such public buildings as may be designated in the following districts of the city of St. Louis, Mo., viz.:

Letting No. 2,503. The district described as the southern district in ordinance numbered 14,697, approved December 29, 1888.

Deposit required, $5,000.

Letting No. 2,504. The district described as the northern district in ordinance number 14,697, approved December 29, 1888.

Deposit required, $5,000.

Bidders will state prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 30-candle-power each, will be furnished, operated, and maintained for lighting streets and public places; also prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 16-candle-power each, will be furnished, operated, and maintained for lighting public buildings.

Everything required for the above electric lighting shall be furnished and maintained by the contractor.

The contract with the city will carry the privilege of furnishing electricity for light and power to private parties and corporations along the lines of distribution.

The contract will contain stipulations by which the city of St. Louis may acquire the entire electric plant and appurtances at the expiration of the contract.

Bidders must submit with proposals general and detailed plans and specifications of the proposed system of distributing the electricity, modes of supporting the lights and wires, and of safety appliances.

Proposals must be made on blank forms, and inclosed in envelopes furnished by the Board of Public Improvements. The certificate of the Treasurer of the city of St. Louis that the sum of $5,000 has been deposited in the treasury must be inclosed with the proposal.

The right to reject any or all proposals is expressly reserved.

Specifications, form of contract, and plans of the districts to be lighted may be seen at the office of the President of the Board of Public Improvements of the city of St. Louis, on and after January 28, 1889.

Any contract let hereunder will require the approval of the Municipal Assembly by ordinance.

By order of the Board.

HENRY FLAD, President.
Attest: EMORY S. FOSTER, Secretary.

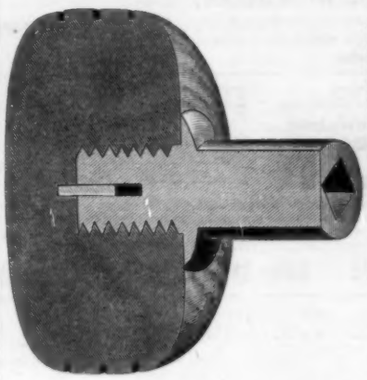
THE
MANSFIELD COMPRESSED LEAD TRAP.

SAFEST IN ACTION.
CHEAPEST IN ECONOMY.
Requires no Ventilation.

The Surest protection against Sewer Gas. Is endorsed by all Architects as being the best Trap in the market.

Manufactured only by the
BOSTON & LOCKPORT BLOCK CO.
102 Commercial St., BOSTON, MASS.
For Sale by the Plumbers' Trade Generally.

BARDSLEY'S
Patent Wood Door Knobs



Wood Knobs, if carefully made of selected and thoroughly dried material, of tasteful design, beautifully and durably finished and put together so that there is no possibility of the knobs coming loose from the shanks, make the best and most desirable knobs for interior doors; as they are pleasing to the eye, pleasant to the hand and are made to harmonize with the surrounding woodwork. We confidently offer the Knobs of this make as meeting all these requirements. We warrant every Knob not to come loose or give out in any way. The engraving represents our latest improved and patented method of fastening the shanks to the heads. Not a single Knob with this fastening has come loose. These are the only Wood Knobs in the market having a patented fastening, all others are merely screwed on, and are liable to come loose at any time. Architects are warned that certain dealers to save a few cents a dozen, have been substituting a very inferior imitation, where these goods have been specified; none should be accepted unless the makers' name is on the box. Price list on application.

J. BARDSLEY,
59 Elm Street, - - NEW YORK.

THE YALE & TOWNE MFG. CO., New York, Phila., Boston and Chicago.

ASPHALT PAVING BLOCKS AND TILES

WGT. 22 LBS.

WGT. 14 LBS.

For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

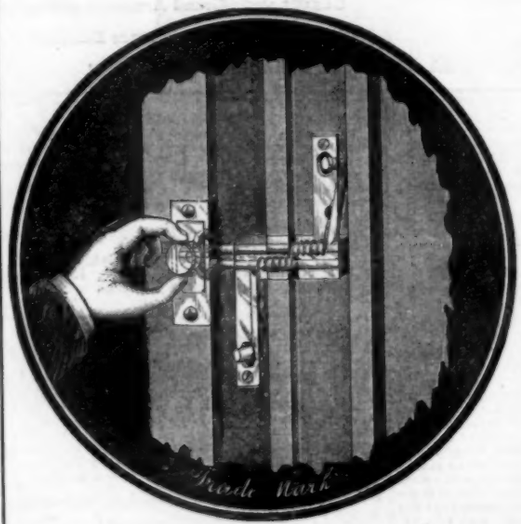
MATERIALS.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY
THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.
THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.
THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md.

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidad Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamber of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.



THE
TIMBY BURGLAR-PROOF SASH-LOCK
— AND —
VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

THE BOWER

SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

B. P. BOWER & CO.,

Manufacturers,

Cleveland, - Ohio.

Protect yourselves against Sewer Gas and Back Water by using

The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.

Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.

Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe

HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on application.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

WESTERLY, - - - R. I.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'
English Shingle Stain.

A. B. RICH, Agent,
Office, D. B. CROCKETT-CO.,
84 William Street, - NEW YORK.

FELTON, RAU & SIBLEY,
Agents,
PHILADELPHIA, PA.

H. M. HOOKER, Agent,
57 W. Randolph St.,
CHICAGO, ILL.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

"BEE HIVE BRAND"

FELT ROOFING.

More than 100,000,000 Square Feet in Use

BY

MANUFACTURING CORPORATIONS and upon Public Buildings, Dwellings and Warehouses.

From an experience of more than **Thirty-Five Years**, in all climates, pronounced superior to any other for **FLAT-ROOFED STRUCTURES.** More than **Twenty-five Acres** of this Roofing is now in wear on the Burnt District, Boston, covered since the great fire of 1872. Samples of this Roofing (removed after **Twenty-one years of service,**) can be seen at the office of the Manufacturers, giving proof positive of its durability.

From the very large number of **Corporations in New England** who have had this Roofing largely in use, and for long periods, in many instances from **Twenty** to **Thirty-five** years, the following are selected:

			Sq. feet.
Arlington Mills,	Lawrence,	Mass.,	240,000

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE CELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH."

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.

This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md: J. D. Mallory. Newton: J. C. Potter, C. E. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott; C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

THE NATIONAL AUTOMATIC
GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

The Union National Gas Saving Co.,
744 BROADWAY, NEW YORK.

Are You Building or Remodelling?

SPURR'S NATURAL WOOD VENEERS.

WE can give your new house an elegant hardwood finish at moderate cost with our VENEERS—lasting and beautiful. In remodelling your old home, do not tear out your painted woodwork. Let us transform it into a hardwood finish with our VENEERS.

SPURR'S PATENT WOOD CARVINGS.

OUR patent Wood Carvings are used by many architects in connection with solid woodwork. Can be had in a large variety of designs, and are indistinguishable from hand-carving.

IMITATION.

AN ACKNOWLEDGMENT OF SUPERIORITY.

The best evidence that the JENKINS BROS. VALVES, JENKINS STANDARD PACKING, and JENKINS DISCS have extraordinary merit, and are held in high esteem by the public, is that they are being *imitated* and *counterfeited*. The imitations resemble the original in appearance only; they lack the general excellence of the genuine. Our friends and customers will sustain us in our endeavor to manufacture the best goods, by not accepting any goods unless stamped as above. This notice has become necessary by the fraudulent use of our name, and to protect the public from being deceived — by unprincipled parties placing imitations on the market.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of the New England Felt Roofing Co., on page iii. This establishment first placed an advertisement in this journal, March 4, 1876, and has kept it ever since that this time before our readers. It is not very easy to convey an idea of the magnitude of one's business in an inch or two of space, so few of our readers could have formed an idea of the area actually covered by the "Bee-Hive" brand of roofing.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

Hartman's Patent Inside Sliding Blind.

A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.

They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*

No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.

The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*

Agents wanted everywhere. Send for illustrated catalogue and prices to

For Hydraulic Elevators, Town Water Supply or Railway service. Special Engines for Electric-Light work. Unequalled for running Elevators, Wood-Tools, or any kind of Machinery.

Guaranteed to consume 25 to 75 per cent less gas than any other Gas Engine doing the same work.

Drawing-Office.

Drawings rendered in line color with reasonable despatch.

ADDRESS

Editors of the American Architect,

211 Tremont Street, Boston, Mass.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
*a*¹.	*American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

		Regular Price.	Club Rate.
b.	*American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
*b*¹.	*American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

		Regular Price.	Club Rate.
c.	AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

*c*¹.	AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

		Regular Price.	Club Rate.
d.	AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
*d*¹.	AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

THE AMERICAN ARCHITECT AND BUILDING NEWS

WITH

Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.	Full Price of Book.	TITLE OF BOOK.	Imperial Edition.	Regular Edition.
$10.00	"Monograph of Trinity Church, Boston."	$17.50	$13.50	$ 2.00	Hart's "Western China."	$11.25	$ 7.25

3.00	Lowell's "Choson: The Land of the Morning Calm."	12.00	8.00	4.00	Goodwin's "The Pilgrim Republic."	13.00	9.00

Subscribers who have already paid their subscription in full to us can avail themselves of these offers by remitting to us the difference between the club rate of the books they select and the subscription price already paid.

These offers are open only to subscribers who place their subscriptions with us directly.

TICKNOR & COMPANY,
211 Tremont Street Boston.

The Durability of a Roofing Tin is the Test of its Value.

The following advertisement of an Insurance Company is in the October No. of *Scribner's Magazine*

"When two brands of the same sort of goods are selling side by side in the market, one bringing double the price of the other, what is it that enables the former to find sale? Always, because it is worth that much more; because it will wear longer, do better service while it lasts, keep one satisfied with his purchase instead of kicking himself for a fool all the time he has it, be reliable at the sharpest emergency instead of liable to give out just when it is needed most, and the concern dealing in such goods *has* to charge more for them because it costs more to make them. * * * *"

This is most aptly illustrated in the case of **GENUINE TAYLOR "OLD STYLE"** Brand of Roofing Plate.

WHY? **BECAUSE**

1.—It costs more to make.
2.—It is therefore worth more.
3.—It will wear longer and do better service.
4.—It will be reliable in the sharpest emergency, instead of giving out just when it is needed the most.
5.—It has been tried over a long number of years and never found wanting.
6.—It is the only brand of Roofing Tin that is imitated, and THEREFORE MUST BE GOOD.
7.—It has never failed to receive a contract against all competitors when tested by practical mechanics.
8.—It is sold at only a moderate profit on the cost.
9.—It does not trade upon the reputation of any other brand.
10.—It is sold under every guarantee that can be exacted.
11.—It is the only Roofing Tin that bears the name and address of the guarantor.
12.—It is therefore the only Plate that affords absolute security to property owners, architects and honest roofers.
13.—It is the only Plate that is stamped, not only with the brand, thickness, registered trade mark, but all with the name and address of the guarantor.

THERE ARE NO WASTERS OF THIS BRAND.

Paradoxical as it may seem the BEST ROOFING TIN IS THE CHEAPEST.

Those wanting THE BEST that can be made at any cost will use the Genuine Taylor "OLD STYLE" Brand, which is the only Roofing that can be offered under the above conditions.

THE CRITIC.

A Weekly Review of Literature and the Arts.

Bishop Potter always reads "The Critic."

I never read it — and, no matter how much driven, I never allow it to go unread — without a fresh conviction of its rare worth. It is so thoroughly just, so discriminating, so full of the atmosphere of a courageous, candid, and open-minded criticism, that one cannot but be proud and glad that so good and helpful a journal is winning its way to the wider recognition and esteem which it so abundantly deserves.
H. C. Potter.

Mr. Whittier Finds It a Welcome Visitor.

I enclose three dollars for The Critic for the coming year. I find it a welcome visitor.
John G. Whittier.

Mr. Stedman Couldn't Get Along Without It.

We could not now get along very well without it. You maintain a high and impartial standard of criticism, and have brought out the talent of new and excellent writers.
Edmund C. Stedman.

The Critic has been the most noteworthy success in its way for years. It began brightly, and has never yet had a dull number..... To-day it is the most interesting journal of literary criticism in the country.—*Springfield Republican.*

Its success is a success of its methods, and these methods indicate a new departure for literary criticism in this country.—*Atlanta Constitution.*

At the head of the critical journals of this country.—*Boston Post.*

It ought to have its place on the table of every library in the country.—*The Christian Union.*

Its pages are full of the best literary criticism on this side of the Atlantic.—*New York Herald.*

Has earned a right to live by the excellence and variety of its materials.—*Harper's Monthly.*

By far the best journal of its class in the country.—*Buffalo Express.*

The first literary journal in America.—*London Academy.*

Ten Cents a Copy. $3.00 a Year.

Three *sample* copies sent, post-paid, for ten cents to any reader of *The American Architect.*

The Critic Co., 743 Broadway, New York.

COMPETITION.

COURT-HOUSE.
[At Woodstock, Ont.]
WOODSTOCK, ONT., January 28, 1889.

The Council of the County of Oxford invite competition in the preparation of plans and specifications for a new court-house, proposed to be erected in the town of Woodstock, Ont., at a cost not to exceed $75,000, complete and furnished.

The following prizes are offered: for the best, $250; for the second-best, $150; for the third, if more than three are submitted, $100.

Written instructions prepared by the Committee may be seen at the County Clerk's office at Woodstock, or will be furnished on application to any person wishing to compete.

JAMES WHITE,
685 County Clerk, County of Oxford.

PROPOSALS.

SLATE BLACK-BOARDS.
[At Cincinnati, O.]

Sealed proposals will be received at the office of the Board of Education, Public Library Building, **until 12 o'clock, noon, of Monday, February 11, 1889,** for furnishing and putting up "Real Slate Black-Boards," for the new 18-room school-house on the northeast corner Elm and Canal Streets, in accordance with the specifications on file in said office.

Each bid must contain the name of every person interested therein, and must be accompanied by a written guaranty by some disinterested person, in the sum of $1,000, that if the bid be accepted a contract will be entered into and the performance of it properly secured.

Bids must be upon blank forms to be obtained in the above office.

Bids must be plainly marked "Proposals for Slate Black-Boards."

The Board reserves the right to reject any or all bids.

By order of the Board of Education.

GEORGE EMIG,
685 Chairman Committee Buildings.

STEEL WIRE, CANVAS, COPPER, ETC.
[At Boston, Mass.]
BOSTON, MASS., January 21, 1889.

Sealed proposals, endorsed "Proposals for Naval Supplies," will be received at the Bureau of Provisions and Clothing, Navy Department, Washington, D. C., **until 11 o'clock A. M., February 16, 1889,** and publicly opened immediately thereafter, to furnish and deliver, at the Boston Navy Yard, 32,480 pounds steel wire, a quantity of cotton and flax canvas, sheet copper, flange iron and miscellaneous equipment supplies.

The articles must conform to the prescribed standard and pass the usual naval inspection.

Tie bids decided by lot.

Blank proposals containing specifications, etc., can be obtained upon application to the Bureau, or to the general storekeeper at the Navy Yard, Boston.

The Department reserves the right to reject any proposal not considered advantageous to the Government.

JAMES FULTON,
685 Paymaster General, U. S. Navy.

LUMBER AND DRAWING MATERIAL.
[At Norfolk, Va.]
NORFOLK, VA., January 23, 1889.

Sealed proposals, endorsed "Proposals for Lumber" or "Drawing Materials," will be received at the Bureau of Provisions and Clothing, Navy Department, Washington, D. C., **until 11 o'clock A. M., February 16, 1889,** and publicly opened immediately thereafter, for 10,000 feet white pine stage plank, 210 poles and shores, and a quantity of drawing material, to be delivered at Navy Yard, Norfolk, Va.

The articles must conform to the prescribed standard and pass the usual naval inspection.

Tie bids decided by lot.

Blank proposals containing specifications, etc., can be obtained upon application to the Bureau, or to the general storekeeper at the Navy Yard, Norfolk, Va.

The Department reserves the right to reject any proposal not considered advantageous to the Government.

JAMES FULTON,
685 Paymaster General, U. S. Navy.

MINERS' HOSPITAL.
[At Hazleton, Pa.]

Proposals will be received **up to March 1, 1889,** for the erection of a miners' hospital at Hazleton, Pa.

Plans and specifications can be seen by applying to Jas. E. Roderick, Esq., Markles Block, Hazleton, Pa.

687 E. L. BULLOCK, Secretary.

OFFICERS' QUARTERS.
[At Fort Monroe, Va.]
FORT MONROE, January 14, 1889.

Sealed proposals, in triplicate, subject to the usual conditions, will be received at this office **until 12 o'clock M., February 14, 1889,** and then opened, for the construction of three double sets of officers' quarters at Fort Monroe, Va.

All information furnished by this office upon application.

The United States reserves the right to reject any or all proposals.

Envelopes containing proposals should be marked "Proposals for Officers' Quarters," and addressed to

CHARLES BIRD,
Captain and Assistant Quartermaster, U. S. Army.
684

METAL WORK.
[At Maryland Shore.]
OFFICE OF THE LIGHT-HOUSE ENGINEER,
FIFTH AND SIXTH DISTRICT,
BALTIMORE, MD., January 19, 1889.

Sealed proposals will be received at this office **until 12 M., of Wednesday, the 13th day of February, 1889,** for furnishing the materials of all kinds necessary for the completion and delivery of the metal work of the Holland's Island Bar, Md., and Great Wicomico River, Va., Light-Houses.

Plans, specification, forms of proposal and other information may be obtained on application to this office.

The right is reserved to reject any and all bids, and to waive any defects.

J. C. MALLERY,
Captain of Engineers, U. S. Army, Light-House Engineer, Fifth and Sixth Districts.
685

PROPOSALS.

Y. M. C. A. BUILDING.
[At Providence, R. I.]
PROVIDENCE, R. I., January 7, 1889.

Sealed proposals for the erection of the Y. M. C. A. Building, on the corner of Westminster and Jackson Streets, Providence, R. I., will be received **until 12 M., Monday, February 4, 1889,** at the office of Stone, Carpenter & Willson, architects, 65 Westminster Street, where the plans and specifications may be seen and information obtained by bidders.

The right to reject any and all bids is reserved.

G. W. R. MATTESON,
BENJAMIN F. ARNOLD,
A. B. MCCRILLIS,
H. N. CAMPBELL, JR.,
EUGENE W. MASON,
Committee on Plans.

ELECTRIC LIGHTING.
[At St. Louis, Mo.]
OFFICE OF THE BOARD OF PUBLIC IMPROVEMENTS,
ST. LOUIS, MO., January 8, 1889.

Sealed proposals for the public work hereinafter mentioned will be received at the office of the Board of Public Improvements of the city of St. Louis, Mo., **until 12 A. M. of the 28th day of February, 1889,** at which hour they will be publicly opened and read, *viz.*:

For lighting with electricity for the term of ten years from January 1, 1890, the streets, public places, and such public buildings as may be designated in the following districts of the city of St. Louis, Mo., *viz.*:

Letting No. 2,503. The district described as the southern district in ordinance numbered 14,697, approved December 29, 1888.

Deposit required, $5,000.

Letting No. 2,504. The district described as the northern district in ordinance number 14,697, approved December 29, 1888.

Deposit required, $5,000.

Bidders will state prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 30-candle-power each, will be furnished, operated, and maintained for lighting streets and public places; also prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 16-candle-power each, will be furnished, operated, and maintained for lighting public buildings.

Everything required for the above electric lighting shall be furnished and maintained by the contractor.

The contract with the city will carry the privilege of furnishing electricity for light and power to private parties and corporations along the lines of distribution.

The contract will contain stipulations by which the city of St. Louis may acquire the entire electric plant and appurtances at the expiration of the contract.

Bidders must submit with proposals general and detailed plans and specifications of the proposed system of distributing the electricity, modes of supporting the lights and wires, and of safety appliances.

Proposals must be made on blank forms, and inclosed in envelopes furnished by the Board of Public Improvements. The certificate of the Treasurer of the city of St. Louis that the sum of $5,000 has been deposited in the treasury must be inclosed with the proposal.

The right to reject any or all proposals is expressly reserved.

Specifications, form of contract, and plans of the districts to be lighted may be seen at the office of the President of the Board of Public Improvements of the city of St. Louis, on and after January 28, 1889.

Any contract let hereunder will require the approval of the Municipal Assembly by ordinance.

By order of the Board.

HENRY FLAD, President.
Attest: EMORY S. FOSTER, Secretary.

THE BROOKLYN BRIDGE RESTS ON NORTON'S CEMENT.

The Trustees of the New York and Brooklyn Bridge, Brooklyn, August 9, 1883.

Mr. F. O. NORTON,

Dear Sir:

During the construction of the New York and Brooklyn Bridge upwards of 100,000 barrels of your cement were used. The concrete with which the caissions were filled was made with your Cement, and the entire weight of the towers rests upon it.

Your Cement has always had the preference at the same price other cements were offered for, and during part of the time in important parts of the work it was selected, even at a higher price, on account of its superiority, especially in the points of uniformity of quality and fineness.

Without hesitation I can recommend your Cement to those desiring a good and reliable article. Very truly yours,

C. C. MARTIN,

Chief Engineer and Superintendent.

F. O. NORTON,

92 Broadway, NEW YORK.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'
English Shingle Stain.

A. B. RICH, Agent,
Office, D. B. CROCKETT CO.,
84 William Street, - NEW YORK.

FELTON, RAU & SIBLEY,
Agents,
PHILADELPHIA, PA.

H. M. HOOKER, Agent,
57 W. Randolph St.,
CHICAGO, ILL.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any "*gas oil*" or "*dead oil*" which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

For sale by all Jobbers and Dealers in Tinners' Supplies throughout the country.

Correspondence Solicited, and Lowest Prices Guaranteed.

THE ONLY REAL
EXPANDING CONDUCTOR.
THE IRWIN & REBER
PATENT
EXPANDING WATER CONDUCTOR.
MANUFACTURED BY THE
S. S. S. Conductor Co.
LIMITED,
163 Lacock Street,
ALLEGHENY, PA.

THE STANDING SEAM allows of an easy and secure fastening, keeping the pipe far enough from the wall to make any overflow from the eave pipe or head, run down the spout, and not the wall; and will open, in case of freezing, so as to prevent bursting, and still remain double-locked and water-tight.

Made in 6-foot lengths, in a single sheet of
SOFT STEEL,
Either Galvanized, Kalameined or Leaded.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 240,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

NOTICE!
We desire to notify purchasers of Steam-Pumps that numerous cheap imitations of Worthington Pumps are being manufactured. It is usually represented that they are made by us or from our patterns, and being apparently close copies, they readily deceive those who are not familiar with our machines. By this method some of them have been introduced and as their construction is invariably of inferior quality the unsuspecting buyer is imposed upon and suffers correspondingly.
We therefore call special attention to the existence of these imitations and to the fact that our machinery is conspicuously marked with our trade name, the use of which by any other manufacturer is unauthorized and illegal.
HENRY R. WORTHINGTON.

Welded Chrome Steel and Iron. (5 ply).

FOR SAFES, VAULTS, JAILS, ETC.
Positively Burglar-proof, cannot be Cut, Sawed, or Drilled,
Chrome Steel Works, Sole Manufacturers,

WILL YOUR WINTER BE AS PLEASANT
as the summer you have so much enjoyed?

The Novelty Furnace

will fill your house with the same warm pleasant balmy atmosphere that has made the past season delightful.

Absolutely free from gas.
No dust in the hot-air pipes.
Servants run them successfully.

Moderate in cost. Moderate in consumption.
Peculiar construction. Great durability.

IMMENSE HEATING POWER.

The large heating-surface exposed by the peculiar arrangement, enables it to constantly afford a large volume of healthfully warmed fresh air which is perfect ventilation.

The manner in which the gases are retained and the indirect passage they are forced to make extracts their principal heat endowing the furnace with

EXTRAORDINARY ECONOMICAL QUALITIES.

Send for descriptive pamphlet.
Correspondence carefully attended.

ABRAM COX STOVE CO.

Pure Ready-Mixed Paints

We desire to call attention of consumers to the fact that we guarantee our ready-mixed paints to be made only of pure linseed oil and the most permanent pigments. They are not "Chemical," "Rubber," "Patent," or "Fire-proof." We use no secret or patent method in manufacturing them by which benzine and water are made to serve the purpose of pure linseed-oil.

THE BRONSON BOILER
For Steam and Hot-Water Heating.
Automatic and Reliable.

With BRICK or IRON Settings, as you may prefer, The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞ We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. **Reliable Agents Wanted.** Send for Illustrated Catalogue and Price List.

WESTON ENGINE CO.,

See last week's issue for particulars.
PAGE STEAM HEATING CO.,
NORWICH, CONN.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governer, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

The Union National Gas Saving Co.,
744 BROADWAY, NEW YORK.

Architects, Builders, and others will confer a favor on the Publishers by mentioning "The American Architect and Building News" when sending for circulars or corresponding with parties advertising in these columns.

Are You Building or Remodelling?

SPURR'S NATURAL WOOD VENEERS.

WE can give your new house an elegant hardwood finish at moderate cost with our VENEERS — lasting and beautiful. In remodelling your old home, do not tear out your painted woodwork. Let us transform it into a hardwood finish with our VENEERS.

SPURR'S PATENT WOOD CARVINGS.

OUR patent Wood Carvings are used by many architects in connection with solid woodwork. Can be had in a large variety of designs, and are indistinguishable from hand-carving.

WORKMEN SENT ANYWHERE.
Views of interiors finished by us, with descriptive circulars, sent upon application.

50 BEEKMAN STREET,

NEW YORK.

WARREN'S "COMPOSITE" FELT,

For Roof Foundations.

A two-ply, composed of one layer of saturated Felt and one of manilla-rope paper with a layer of cement between. Combines durability and strength with lightness and pliability, and is *absolutely* impervious to moisture. *For use under slate, shingles,* etc., it is especially valuable, since as soon as the sun comes upon the roof, the cement contained in the sheathing closes tightly around the nails that have been driven through it, and form of the sheathing itself a complete waterproof covering. It is four and one-half times stronger than ordinary roofing.

Send for Samples and Circular No. 12.

Important to Users of Valves.

Owing to the popularity the JENKINS BROS. VALVES have attained, the market has been subjected to BASE IMITATIONS.

One important defect in the imitations referred to is *insufficient opening* for inlet *of steam or* Fluid, *thereby checking the flow.* Purchasers of Valves should be careful to know that they are of capacity suited to size of pipe to which the Valves are to be attached. All Valves manufactured by **Jenkins Bros. are Warranted Full Opening.**

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of Messrs. Waldo Brothers, on page iii. This establishment first placed an advertisement in this journal, April 22, 1876, and has kept it ever since that time before our readers. Architects who have mason work to execute within freighting distance of this city may feel assured that through this firm every necessary and many unusual supplies can be procured.

WANTED.

DRAUGHTSMAN. — The *American Architect* Drawing-Office has need of a good general draughtsman. A working knowledge of perspective drawing is essential. Address, with particulars, the Editors.

WANTED.

HEAD ASSISTANT. — A permanent position for a good designer and constructor is to be had in an office in St. Paul, Minn. Office-work only required. Address, with particulars, "St. Paul," care of the *American Architect*. 686

WANTED.

CATALOGUES. — Wanted catalogues, price-lists, samples, etc., of building materials and supplies. Address, Alderman & Lee, architects, Birmingham, Conn. 686

WANTED.

DESIGNER. — Wanted to arrange with an architectural designer having practical experience in marble mantels, altars, etc., etc. Must be a good colorist. Endolithic Marble Co., U. S., 123 Fifth Avenue, New York City. 685

WANTED.

DESIGNER AND SUPERINTENDENT. — Position wanted as designer and superintendent for mural decoration. Address, "E. L. W.," uptown *Tribune*, New York. 685

WANTED.

SALESMAN. — A leading manufacturer of locks and builders' hardware desires a salesman of good education and address. While some acquaintance with the trade is desirable, good, general capacity is even more so. A preference will be given to one having an extended acquaintance in Boston, especially among architects. The position offers a large opportunity for advancement, and the connection is in every way desirable. Address, "Lock," Box 3684, Boston, Mass. 685

WANTED.

GENERAL DRAUGHTSMAN. — A good, general draughtsman, with Eastern experience. Can give permanent position to the right man. Give experience and salary wanted. Address, F. E Kidder & John J. Humphreys, architects, Barth Block, Denver, Col. 686

WANTED.

DRAUGHTSMAN. — A good, experienced detail and general draughtsman. Merrill & Cutler, 115 Central Street, Lowell, Mass. t.f.

DYCKERHOFF
PORTLAND CEMENT

Is superior to any other Portland Cement made. It is very finely ground, always uniform and reliable, and of such extraordinary strength that it will permit the addition of 25 per cent more sand, etc., than other well-known brands, and produce the most durable work. It is therefore the most economical to use. 8,000 barrels have been used in the foundations of the Statue of Liberty. Architects and those interested in Portland Cement will please send for my pamphlet, which will be mailed free on application. It contains valuable directions for the employment of Portland Cement, a table of results of the strength of the Dyckerhoff Cement when mixed with sand and broken stone in various proportions, together with tests and testimonials of eminent Engineers, Architects and Consumers.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
a[1].	*American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

		Regular Price.	Club Rate.
b.	*American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
b[1].	*American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

		Regular Price.	Club Rate.
c.	AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

c[1].	AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

		Regular Price.	Club Rate.
d.	AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
d[1].	AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9.00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

THE AMERICAN ARCHITECT AND BUILDING NEWS

WITH

COMPETITIONS.

$100 PRIZE OFFERED.—A prize of one hundred dollars is hereby offered for the best perspective drawing of model exposition grounds, showing therein a memorial hall, main, machinery, agricultural, live-stock and poultry buildings, race-track, grand stand, etc. The award will be made by a competent committee, and the prize promptly paid. All drawings must be received not later than March 15, 1889, and send to JNO. T. DICKINSON, Secretary International Fair Association, San Antonio, Tex.

COURT-HOUSE.

[At Woodstock, Ont.]

WOODSTOCK, ONT., January 28, 1889.

The Council of the County of Oxford invite competition in the preparation of plans and specifications for a new court-house, proposed to be erected in the town of Woodstock, Ont., at a cost not to exceed $75,000, complete and furnished.

The following prizes are offered: for the best, $250; for the second-best, $150; for the third, if more than three are submitted, $100.

Written instructions prepared by the Committee may be seen at the County Clerk's office at Woodstock, or will be furnished on application to any person wishing to compete.

JAMES WHITE,
685 County Clerk, County of Oxford.

PROPOSALS.

February 4, 1889. Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock, P. M., 23d day of February, 1889, for the labor and materials required in the remodelling of old hot-water heating apparatus in old building, and in the erection and completion of the new low-temperature, hot-water heating and ventilating apparatus for the extension of the United States Custom-House, etc., building at Richmond, Va., in accordance with the specification and drawing, copies of which, with other necessary information, may be seen on application at this office; the office of the Superintendent; the Master Builders' Associations at Boston, Mass., and Baltimore, Md.; the Builders' Exchange at Cincinnati, O.; the Builders' and Traders' Exchange at Chicago, Ill.; the Mechanics' and Traders' Exchange, New York City; the Engineers' Society of Western Pennsylvania at Pittsburgh, Pa., and the Master Builders' Exchange at Philadelphia, Pa. Each bid must be accompanied by a certified check for $500. The Supervising Architect will furnish a limited number of copies of the specification and drawings at $3 a set, upon receipt of that sum in post-office money-order, drawn to the order of the Treasurer of the United States. WILL. A. FRERET, Supervising Architect. 685

TO IRON MANUFACTURERS. Office of the Light-House Engineer, Third District, Tompkinsville, N. Y., February 1, 1889. Proposals will be received at this office until 12 o'clock, noon, of Tuesday, the 21st day of February, 1889, for furnishing the materials and labor of all kinds necessary for the construction, completion and delivery of the Stonington Breakwater Light-Station, Connecticut. Plans, specifications, forms of proposal and other information may be obtained on application to this office. The right is reserved to reject any or all bids, and to waive any defects. D. P. HEAP, Major of Engineers, U. S. Army, Engineer Third Light-House District. 686

MINERS' HOSPITAL.
[At Hazleton, Pa.]

Proposals will be received **up to March 1, 1889,** for the erection of a miners' hospital at Hazleton, Pa.

Plans and specifications can be seen by applying to Jas. E. Roderick, Esq., Markles Block, Hazleton, Pa.

687 E. L. BULLOCK, Secretary.

SLATE BLACK-BOARDS.
[At Cincinnati, O.]

Sealed proposals will be received at the office of the Board of Education, Public Library Building, **until 12 o'clock, noon, of Monday, February 11, 1889,** for furnishing and putting up "Real Slate Black-Boards," for the new 18-room school-house on the northeast corner Elm and Canal Streets, in accordance with the specifications on file in said office.

Each bid must contain the name of every person interested therein, and must be accompanied by a written guaranty by some disinterested person, in the sum of $1,000, that if the bid be accepted a contract will be entered into and the performance of it properly secured.

Bids must be upon blank forms to be obtained in the above office.

Bids must be plainly marked "Proposals for Slate Black-Boards."

PROPOSALS.

The Board reserves the right to reject any or all bids.

By order of the Board of Education.

GEORGE EMIG,
685 Chairman Committee Buildings.

STEEL WIRE, CANVAS, COPPER, ETC.
[At Boston, Mass.]
BOSTON, MASS., January 21, 1889.

Sealed proposals, endorsed "Proposals for Naval Supplies," will be received at the Bureau of Provisions and Clothing, Navy Department, Washington, D. C., **until 11 o'clock** A. M., **February 16, 1889,** and publicly opened immediately thereafter, to furnish and deliver, at the Boston Navy Yard, 32,480 pounds steel wire, a quantity of cotton and flax canvas, sheet copper, flange iron and miscellaneous equipment supplies.

The articles must conform to the prescribed standard and pass the usual naval inspection.

Tie bids decided by lot.

Blank proposals containing specifications, etc., can be obtained upon application to the Bureau, or to the general storekeeper at the Navy Yard, Boston.

The Department reserves the right to reject any proposal not considered advantageous to the Government.

JAMES FULTON,
685 Paymaster General, U. S. Navy.

LUMBER AND DRAWING MATERIAL.
[At Norfolk, Va.]
NORFOLK, VA., January 23, 1889.

Sealed proposals, endorsed "Proposals for Lumber" or "Drawing Materials," will be received at the Bureau of Provisions and Clothing, Navy Department, Washington, D. C., **until 11 o'clock** A. M., **February 16, 1889,** and publicly opened immediately thereafter, for 10,000 feet white pine stage plank, 210 poles and shores, and a quantity of drawing material, to be delivered at Navy Yard, Norfolk, Va.

The articles must conform to the prescribed standard and pass the usual naval inspection.

Tie bids decided by lot.

Blank proposals containing specifications, etc., can be obtained upon application to the Bureau, or to the general storekeeper at the Navy Yard, Norfolk, Va.

The Department reserves the right to reject any proposal not considered advantageous to the Government.

JAMES FULTON,
685 Paymaster General, U. S. Navy.

METAL WORK.
[At Maryland Shore.]
OFFICE OF THE LIGHT-HOUSE ENGINEER, FIFTH AND SIXTH DISTRICT,
BALTIMORE, MD., January 19, 1889.

Sealed proposals will be received at this office **until 12 M. of Wednesday, the 13th day of February, 1889,** for furnishing the materials of all kinds necessary for the completion and delivery of the metal work of the Holland's Island Bar, Md., and Great Wicomico River, Va., Light-Houses.

Plans, specification, forms of proposal and other information may be obtained on application to this office.

The right is reserved to reject any and all bids, and to waive any defects.

J. C. MALLERY,
Captain of Engineers, U. S. Army, Light-House Engineer, Fifth and Sixth Districts.
685

PROPOSALS.

ELECTRIC LIGHTING.
[At St. Louis, Mo.]
OFFICE OF THE BOARD OF PUBLIC IMPROVEMENTS,
ST. LOUIS, MO., January 8, 1889.

Sealed proposals for the public work hereinafter mentioned will be received at the office of the Board of Public Improvements of the city of St. Louis, Mo., **until 12 A. M. of the 28th day of February, 1889,** at which hour they will be publicly opened and read, *viz.:*

For lighting with electricity for the term of ten years from January 1, 1890, the streets, public places, and such public buildings as may be designated in the following districts of the city of St. Louis, Mo., *viz.:*

Letting No. 2,503. The district described as the southern district in ordinance numbered 14,697, approved December 29, 1888.

Deposit required, $5,000.

Letting No. 2,504. The district described as the northern district in ordinance number 14,697, approved December 29, 1888.

Deposit required, $5,000.

Bidders will state prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 30-candle-power each, will be furnished, operated, and maintained for lighting streets and public places; also prices per annum at which arc-lights of 2,000-candle-power each, or incandescent lights of 16-candle-power each, will be furnished, operated, and maintained for lighting public buildings.

Everything required for the above electric lighting shall be furnished and maintained by the contractor.

The contract with the city will carry the privilege of furnishing electricity for light and power to private parties and corporations along the lines of distribution.

The contract will contain stipulations by which the city of St. Louis may acquire the entire electric plant and appurtances at the expiration of the contract.

Bidders must submit with proposals general and detailed plans and specifications of the proposed system of distributing the electricity, modes of supporting the lights and wires, and of safety appliances.

Proposals must be made on blank forms, and inclosed in envelopes furnished by the Board of Public Improvements. The certificate of the Treasurer of the city of St. Louis that the sum of $5,000 has been deposited in the treasury must be inclosed with the proposal.

The right to reject any or all proposals is expressly reserved.

Specifications, form of contract, and plans of the districts to be lighted may be seen at the office of the Precident of the Board of Public Improvements of the city of St. Louis, on and after January 23, 1889.

Any contract let hereunder will require the approval of the Municipal Assembly by ordinance.

By order of the Board.

HENRY FLAD, President.

Attest: EMORY S. FOSTER, Secretary.

THE DETACHABLE EMPIRE SASH CORD FASTENER.
(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful invention for Window Sashes ever put on the market. Every window requires them.
Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the
EMPIRE PORTABLE FORGE CO., Cohoes, N. Y., U. S. A.

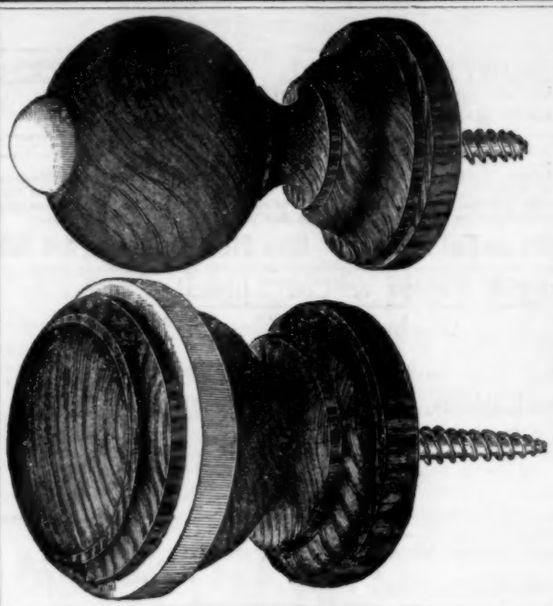
THE BOWER SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

B. P. BOWER & CO.,
Manufacturers,
Cleveland, - Ohio.



Architects using the *Bardsley Wood Door Knobs* should also use the *Bardsley Door Stops*, which although turned by hand, of selected material and having the same excellent finish as the *Door Knobs*, cost but little more than the common goods, which previous to the introduction of these, were the only kind in the market. Made regularly in *Ash, Oak, Cherry, Walnut, Apple, Maple and Mahogany*, and to order in such woods as *Sycamore, Birch, Hazel, Cypress, Bird's-Eye Maple, Rosewood, Antique Oak, Yellow Pine*, etc. *Price List on application.*

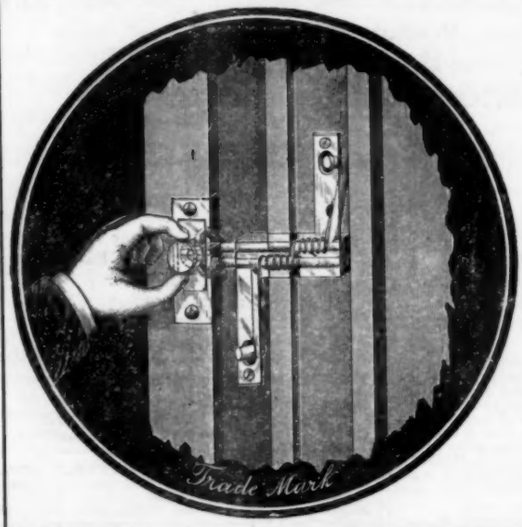
39 Elm Street, New York.
— AND —
THE YALE & TOWNE MFG. CO., New York, Boston, Phila. & Chicago.



THE
TIMBY BURGLAR-PROOF SASH-LOCK
— AND —
VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.
Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

JENKINS & TIMBY
Manufacturers,
OSWEGO, N. Y.

ASPHALT PAVING BLOCKS AND TILES

For Streets, Sidewalks, Gutters, Railway Stations, Stables, Cellars, Breweries, Areas, Etc.

MATERIALS.—Crushed Limestone and Trinidad Asphaltum, subjected to a pressure of 3,000 pounds to the square inch at 250° (Fahrenheit.

Noiseless, non-absorbent and less costly than stone or any other durable pavement.

Subjected to 10 years' trial. In 1887 over 5,000,000 of these blocks and tiles were laid in Washington, Baltimore, Philadelphia, Camden, Trenton, New York, Chicago, Etc.

MANUFACTURED BY
THE HASTINGS PAVEMENT CO., 140 Pearl Street, New York, N. Y.
THE ASPHALT BLOCK CO., 501 Chestnut Street, Philadelphia, Pa.
THE MARYLAND PAVEMENT CO., 5 Cham. of Com. Build., Baltimore, Md

Licenses under fifteen patents for processes and machinery and exceptional facilities for the purchase of Trinidad Asphalt, to be used in making these blocks and tiles, granted by The International Pavement Co., Chamber of Commerce Building, Baltimore, Md., or 86 Equitable Building, Boston, Mass.

Old Masters

OF BELGIUM AND HOLLAND. Translated by Mrs. Mary E. Robbins, from the French of Eugene Fromentin. 1 vol. 8vo. With 12 full-page Heliotypes. $3.

The Boston *Courier* says: "It is difficult adequately to convey a sense of the charm of this book."

The N. Y. *Star* says that "it lets the reader into the real life of the artists, into their surroundings and even into their feelings."

Ticknor & Co., 211 Tremont St., Boston.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'

English Shingle Stain.

A. B. RICH, Agent, Office, D. B. Crockett Co., 84 William St., N. Y.
FELTON, RAU & SIBLEY, Agents, Philadelphia, Pa.
H. M. HOOKER, Agent, 57 W. Randolph St., Chicago, Ill.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

IMPORTANT

To Architects, Builders, House-Painters, Decorators, Boat-Builders and Yachtsmen, desiring an EXTREMELY DURABLE Finish for wood.

Are superior to any Varnishes or Wood-Finishes in the market, for the following reasons, viz.: —

They possess more body, higher lustre, greater resisting properties to atmospheric influences, action of water & alkali, are more elastic, will not scratch or mar white, and are more durable.

ROSENBERG'S TRADE ELASTICA MARK REGISTERED FINISHES NO. 1 & NO. 2.

For all classes INSIDE WORK, Requiring extreme durability, use No. 2 ELASTICA FINISH.

For OUTSIDE WORK, Requiring extreme durability, use No. 1 ELASTICA FINISH.

MANUFACTURED BY

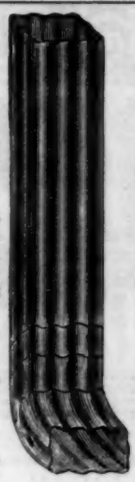
Sole Manufacturers. PHILADELPHIA.

MAIN OFFICE:
1705 Chestnut Street, Philadelphia, Pa

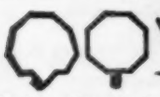


For sale by all Jobbers and Dealers in Tinners' Supplies throughout the country.

Correspondence Solicited, and Lowest Prices Guaranteed.

THE ONLY REAL
EXPANDING CONDUCTOR.
THE IRWIN & REBER
PATENT
EXPANDING WATER CONDUCTOR.
MANUFACTURED BY THE
S. S. S. Conductor Co.
LIMITED,
163 Lacock Street,
ALLEGHENY, PA.

THE STANDING SEAM allows of an easy and secure fastening, keeping the pipe far enough from the wall to make any overflow from the eave pipe or head, run down the spout, and not the wall; and will open, in case of freezing, so as to prevent bursting, and still remain double-locked and water-tight.



Made in 6-foot lengths, in a single sheet of
SOFT STEEL,
Either Galvanized, Kalameined or Leaded.
AGENTS FOR NEW ENGLAND STATES.
E. B. BADGER & SON.
Coppersmiths & Galvanized Iron Workers.
Nos. 63 & 65 Pitts St.,
BOSTON, MASS.

Best Conductor of all.
RITCHIE'S
Corrugated Expanding
Conductor.

Guaranteed no Infringement.

This pipe has all the advantages of other corrugated conductors in not bursting from freezing, and in addition:

It has no soldered joints.

The enlarged coupling makes the conductor of even size inside throughout.

It is galvanized, after formation, great care being taken to secure a smooth coating of zinc free from dross and impurities.

MANUFACTURED BY
LAMB & RITCHIE,
Boston Spiral Tube Works,
CAMBRIDGEPORT, MASS

Double passage, quick fire reach, and practical fire escape. Absolute safety to occupants of lofty buildings, to invalids, the feeble and timid. Descriptive catalogue on application.

S. J. PARDESSUS, Patentee,
Office, 10 and 12 College Place. - - NEW YORK

Modern Perspective.

A Treatise upon the Principles and Practice of Plane and Cylindrical Perspective.

AN INVALUABLE BOOK FOR ARTISTS, ARCHITECTS, DRAUGHTSMEN AND CIVIL ENGINEERS.

— BY —

WILLIAM R. WARE,

Professor of Architecture in the School of Mines, Columbia College.

1 vol. 12mo. 321 pages, with 27 plates in a Portfolio - - - - - - - - - $5.00

This is by far the most exhaustive of modern works on the subjects relating to perspective, plain and panoramic, and will be of great value to all architects and artists, and others interested in the problems of art. The scientific and pictorial aspects of these investigations are carefully and thoroughly considered, both independently and in their connection with drawing; and the propositions of the author are illustrated by plates of architectural objects and perspective plans.

"The book is written in clear English, free from unnecessary technicalities, and in a much more felicitous style than such text-books usually are. The plates require a prodigious quantity of careful work, and are correspondingly valuable."—*New York World.*

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE CELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH."

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.

This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

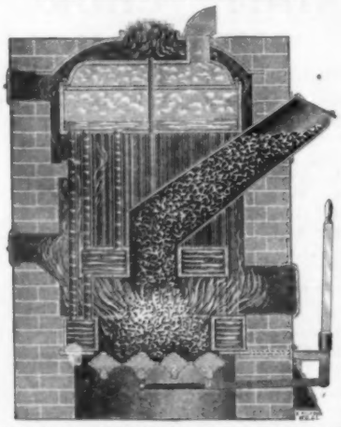
THE BRONSON BOILER
For Steam and Hot-Water Heating. Automatic and Reliable.



With BRICK or IRON Settings, as you may prefer. The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. Reliable Agents Wanted. Send for Illustrated Catalogue and Price List.

WESTON ENGINE CO.,
Sole Manufacturers. Painted Post, N. Y.

"The American Architect Scholarship."

THE
TRAVELLING SCHOLARSHIP,

Established by the American Architect and Building News,

IS open only to subscribers to the Imperial Edition of that journal (without distinction of sex or color) who may dwell in any part of the United States, under the following general conditions:

1. The applicant must be a citizen of the United States.
2. Subscriptions to the Imperial Edition must be prepaid *in full* direct to the publishers.
3. At the time of filing notice of intention to compete, the applicant must be between the ages of twenty and twenty-five years. It is desirable that notice should be filed with the editors before May 15, 1889.
4. The applicant must have served for at least two years in offices of members of the American Institute of Architects, or of the Western Association of Architects. A graduate's diploma granted by a technical school will be accepted in lieu of one of these years' of office-work.
5. Applicants must undergo examination in:
   a. Drawing — free-hand and mechanical.
   b. Architectural Design.
   c. Elements of Construction.
   d. History of Architecture.
   e. English Composition.
   f. One Foreign Language.
   g. Elements of Sanitation, Heating and Ventilating.

   The exact date and place of examination will be announced later.
6. An examination fee of $5.00 for the benefit of the examiners will be required.
7. The appointee must take his departure within six weeks of receiving notice of appointment. One hundred dollars will be paid to him at the time of taking ocean passage and the balance of the scholarship in monthly instalments of $33.33.
8. The course of travel and study while abroad will be outlined by the editors of the *American Architect.*

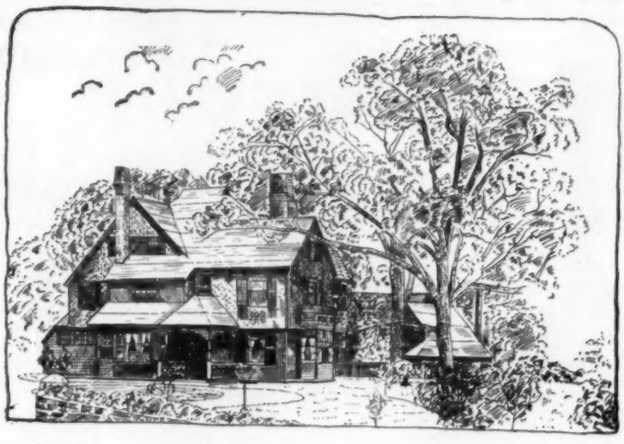
December 22, 1888.

TICKNOR & COMPANY, Publishers, 211 Tremont Street, Boston.

The exterior of this house is stained with

CABOT'S CREOSOTE STAIN

for Shingles, Fences, Clapboards Etc



These Stains are very durable and give a much more artistic effect than paint, while they are cheaper, and very easy to apply.

Our Stains contain no water and are the only exterior Stains that do not contain kerosene.

PRICES are 40, 60 and 75 cents per Gallon According to Color.

SEND for Samples on Wood, and Circulars.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
CUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

JENKINS BROS. VALVES.

THE ENDORSEMENT OF FIRST-CLASS ENGINEERS AND MECHANICS THROUGHOUT THE COUNTRY has fully demonstrated these valves to possess the following advantages over all other valves now in use:

1. A perfectly tight valve under any and *all pressures of steam, oils, or gases.*
2. Sand or grit of any kind will not injure the seat.
3. You do not have to take them off to repair them.
4. They can be repaired by any mechanic in a few minutes.
5. The elasticity of the Disc allows it to adapt itself to an imperfect surface.

In Valves having ground or metal seats, should sand or grit get upon the seat, it is impossible to make them tight, except by regrinding, which is expensive if done by hand, and if done by machine soon wears out the valve, and in most cases they have to be disconnected from the pipes, often costing more than a new valve. The Jenkins Discs used in these valves are manufactured under our 1880 patent, and will *stand any pressure of steam, oils, or acids.*

P. G. CLARKE & SON, Oxford, Chenago Co., N. Y.

THE severe storms of the early winter of this year have in many cases proved too penetrating for the brick walls of some of the best built city houses. To mitigate this trouble, many architects specify two or more coats of boiled linseed-oil, to be applied after the brickwork is dry. This preparation, however, still leaves the bricks very porous, and even paint is entirely inadequate to render an exposed wall impervious to driving rains. A preservative for this purpose should contain gums which do not become friable at the extremest cold of winter, and which do not lie upon the surface of the bricks to form a gloss. We believe that our friends among architects will credit our statement when we say that we have entirely succeeded in obtaining this result. The chief gum used stands a temperature of 700 degrees without changing. With our brick preservative, chimneys can be kept from crumbling, as it is not destroyed by the lime of the mortar, which is the case with linseed-oil. It greatly improves the appearance of brickwork, because it contains no solid paint to destroy the soft texture of the brick. It colors the whole wall a rich red, appearing like the handsomest face-brick, and at a less cost than paint. It is not in any respect identical with our Creosote Stain, which answers the same preserving purpose for wood. For further information address the undersigned.

The Durability of a Roofing Tin is the Test of its Value.

The following advertisement of an Insurance Company is in the October No. of *Scribner's Magazine*

"When two brands of the same sort of goods are selling side by side in the market, one bringing double the price of the other, what is it that enables the former to find sale? Always, because it is worth that much more; because it will wear longer, do better service while it lasts, keep one satisfied with his purchase instead of kicking himself for a fool all the time he has it, be reliable at the sharpest emergency instead of liable to give out just when it is needed most, and the concern dealing in such goods *has* to charge more for them because it costs more to make them. * * * *"

This is most aptly illustrated in the case of GENUINE TAYLOR "OLD STYLE" Brand of Roofing Plate.

WHY?

BECAUSE

1.—It costs more to make.
2.—It is therefore worth more.
3.—It will wear longer and do better service.
4.—It will be reliable in the sharpest emergency, instead of giving out just when it is needed the most.
5.—It has been tried over a long number of years and never found wanting.
6.—It is the only brand of Roofing Tin that is imitated, and THEREFORE MUST BE GOOD.
7.—It has never failed to receive a contract against all competitors when tested by practical mechanics.
8.—It is sold at only a moderate profit on the cost.
9.—It does not trade upon the reputation of any other brand.
10.—It is sold under every guarantee that can be exacted.
11.—It is the only Roofing Tin that bears the name and address of the guarantor.
12.—It is therefore the only Plate that affords absolute security to property owners, architects and honest roofers.
13.—It is the only Plate that is stamped, not only with the brand, thickness, registered trade mark, but all with the name and address of the guarantor.

THERE ARE NO WASTERS OF THIS BRAND.

Paradoxical as it may seem the BEST ROOFING TIN IS THE CHEAPEST.

Those wanting THE BEST that can be made at any cost will use the Genuine Taylor "OLD STYLE" Brand, which is the only Roofing that can be offered under the above conditions.

Home Sanitation,

A Manual for Housekeepers, by the Sanitary Science Club of the Association of Collegiate Alumnæ. Edited by Ellen H. Richards and Marion Talbot. Cloth. . . . . 50 cents.

THE object of this manual is to arouse the interest of housekeepers in the sanitary condition of their homes, and to indicate the points requiring investigation, the methods of examination, and the practical remedies. The subjects treated are the Situation of the House, care of the Cellar, Plumbing and Drainage, Ventilation, Heating, Lighting, Furnishing, Clothing, Food, and Drink. Each topic is introduced by an explanatory statement, which is followed by a series of questions so framed that an affirmative answer implies a satisfactory arrangement; and they also suggest a remedy if the answer is negative.

MONOGRAPHS

Of American Architecture, - No. 5.

TRINITY CHURCH,

BOSTON, MASS.,

GAMBRILL & RICHARDSON, Architects.

Twenty-three Plates, of which one is Helio-chrome. Price, $10.00.

Discourses on Architecture.

By Eugene Emanuel Viollet-Le-Duc. 2 vols. 8vo. Richly and copiously illustrated, with 37 steel plates and over 200 wood-cuts, many of which are full-page. $15.00. A new edition of this noble classic of architecture and æsthetics.

"While it will be greatly prized by professional architects in the United States, its literary merits are of such a high order as to commend it to all persons of taste and culture. We can do but the faintest justice to its philosophical depth, historical research, professional ability, critical taste and bright originality." — *Chicago Inter-Ocean.*

"It discusses the grounds and history of architecture as an art, with copious illustrations of the various schools and methods of architecture, and is written in a noble and agreeable manner — less piquant than that of Ruskin, but also less fantastic and more practical." — *Springfield Republican.*

"For anybody who really cares to know about architecture, these 'Discourses' may confidently be recommended as forming the best help he can get in English." — *New-York World.*

"We have no hesitation in saying, deliberately, and without qualification, that no work of anything like equal value to American architects has ever been published in this country — none from the study of which they and all lovers of art may derive so many, so durable and so important lessons for the elevation and perfection of their art." — *New-York Christian Intelligencer.*

TICKNOR & CO., Boston.

Decennial Index of Illustrations

IN THE

American Architect and Building News.

1876 to 1885. 1 vol. 8vo. . . . $2.00

A carefully-made topical index to the thousands of illustrations printed in "The American Architects" for the past ten years, with the architects and costs of the buildings illustrated. These include Sketches, Etchings, General Views; Towers and Spires; Monuments, Statues, and Tombs; Interiors and Furniture; Entrances and Gateways; Educational, Mercantile, and Public Buildings; Churches and Parish-buildings; Dwellings; Club-Houses; Theatres, Stables, and Farm-Buildings; Hotels, Museums, Libraries, and Town-Halls.

TICKNOR & COMPANY.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," the following schedule of

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	$22.00	$17.25
*a*¹.	*American Architect* (Regular Edition), and TICKNOR'S PAPER SERIES (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

		Regular Price.	Club Rate.
b.	*American Architect* (Imperial Edition), and TICKNOR'S POCKET POETS,	$20.50	$17.00
*b*¹.	*American Architect* (Regular Edition), and TICKNOR'S POCKET POETS,	16.50	13.00

"Ticknor's Pocket Poets," seven illustrated volumes, (size 4 1-2 inches by 6 inches) bound in half seal and enclosed in a special leatherette box, include

SCOTT'S "Lady of the Lake."
SCOTT'S "Lay of the Last Minstrel."
SCOTT'S "Marmion."
TENNYSON'S "The Princess."
TENNYSON'S "Enoch Arden, etc."
BYRON'S "Childe Harold."
OWEN MEREDITH'S "Lucile."

		Regular Price.	Club Rate.
c.	AMERICAN ARCHITECT (Imperial Edition), and Clement's "Handbook of Legendary Art," " "Painters, Sculptors, Architects," etc., " "Artists of the 19th Century."	$19.00	$16.00

Mrs. Clement's handbooks are invaluable aids to the reader of the history of art and architecture.

*c*¹.	AMERICAN ARCHITECT (Regular Edition), and the three volumes above mentioned,	15.00	12.00

		Regular Price.	Club Rate.
d.	AMERICAN ARCHITECT (Imperial Edition), and "Davy and the Goblin." "Three Good Giants." "Peterkin Papers."	$14.50	$13.00
*d*¹.	AMERICAN ARCHITECT (Regular Edition), and the three juveniles above mentioned,	10.50	9 00

These juveniles, all handsomely illustrated, are classics of their kind.

Besides these special offers, we have arranged, to satisfy the desires of other readers, the following list:

WILL. A. FRERET, Supervising Architect. 686

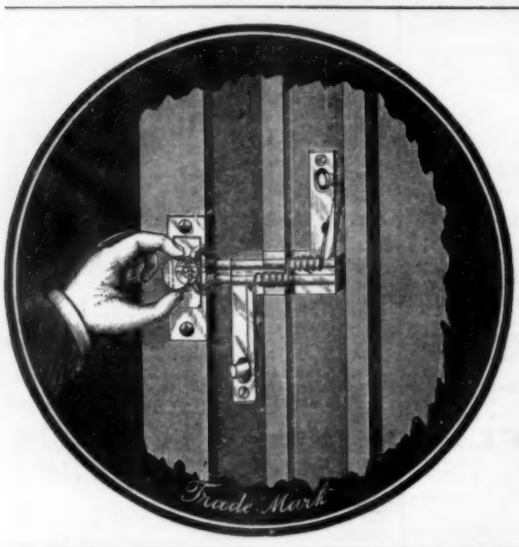
BARDSLEY'S
Pat. Checking Spring
HINGES
FOR
DOUBLE ACTING DOORS

They close the door absolutely without noise or violence, checking and stopping it at once in its proper position. All liability to accidents from violently swinging doors is entirely overcome. The mechanism is contained in a cylindrical casing which is set into the floor beneath the door. The casing is filled with a specially prepared, non-freezing oil which serves both as check and lubricant. Dust and dirt cannot enter. A large number of the hinges are in use and are giving the best satisfaction.

J. BARDSLEY,

59 ELM STREET, - NEW YORK.



THE
TIMBY BURGLAR-PROOF
SASH-LOCK
AND
VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

JENKINS & TIMBY

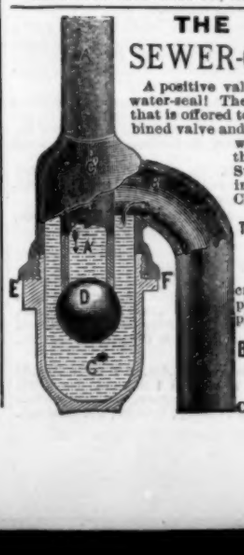
THE DETACHABLE EMPIRE SASH CORD FASTENER.
(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful invention for Window Sashes ever put on the market. Every window requires them.

Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the

EMPIRE PORTABLE FORGE CO., Cohoes, N. Y., U. S. A.



THE BOWER
SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

TO EUROPE,

ADDRESS THE EDITORS.

"SKETCHES ABROAD."

By J. A. SCHWEINFURTH, Architect.

A PORTFOLIO of sketches of interesting and useful examples of architecture, details, etc., never before published, and for the most part never photographed, of work of peculiar interest to architects at the present time. These sketches were made during a nine months' tour of study abroad, in Italy, France, Spain, and in the South-Kensington Museum, during the year 1886. The work is as interesting to the non-professional as it is useful to the architect in his daily work in design, not only in reference to detail, but as to mass and grouping.

The author has found, away from beaten paths, interesting examples of the old *manoirs*, or French manor-houses, and *chateaux*. Among the plates are presented several of these *manoirs*; half-timbered houses with details, from Normandy and Brittany; work of the period of Francis I; towers, *chateaux*; details from the Italian and French Renaissance; Romanesque and Byzantine work of Venice and Ravenna, and the Romanesque of Auvergne; wrought-iron from Venice and from Spain, and from the South-Kensington Museum.

This work contains 30 plates, reproduced in *fac-simile* from the author's sketches in pen; pencil, and water colors, by the most approved processes, and printed on 15" x 20" heavy plate paper, in specially designed portfolio.

The price of the work is $15.00. Subscriptions may be sent to

TICKNOR & CO., 211 Tremont Street, Boston, Mass.

ENGINES and PUMPS COMBINED

For Hydraulic Elevators, Town Water Supply or Railway service. Special Engines for Electric-Light work. Unequalled for running Elevators, Wood-Tools, or any kind of Machinery.

Guaranteed to consume 25 to 75 per cent less gas than any other Gas Engine doing the same work.

Architects, Builders, and others will confer a favor on the Publishers by mentioning "The American Architect and Building News" when sending for circulars or corresponding with parties advertising in these columns.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

FELTON, RAU & SIBLEY, Agents, Philadelphia, Pa.
H. M. HOOKER, Agent, 57 W. Randolph St., Chicago, Ill.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

DURHAM
DRAINAGE FITTINGS

Are made with an interior shoulder (as in Fig. A) securing flush inner surface. Ordinary steam fittings have an interior depression (as in Fig. B) and are not suitable for drainage purposes.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas, is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 240,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

MADE ONLY BY
THE SMITH & EGGE MANUFACTURING CO.,
BRIDGEPORT, CONN.

The most reliable and economical article in the market for the purpose. GREAT TENSILE STRENGTH Does not corrode; does not lose its vitality by continuous use, or exposure to the elements; runs over any pulley, and gives satisfaction wherever it is used. Fixtures made of steel wire, is very simple and easily applied. Prices very low. Samples sent to any architect in the United States, free, on application. Now in use in State House, Hartford; Providence City Hall; Singer Building, Chicago; J. C. Flood's, Menlo Park, Cal.; Vanderbilt and Florence Flats, New York; Boreel Building, New York; new State War and Navy Departments, and Patent Office, Washington, D. C.; *Herald* Building, Boston, and very many other fine buildings in all parts of the United States.

NOTICE!
We desire to notify purchasers of Steam-Pumps that numerous cheap imitations of Worthington Pumps are being manufactured. It is usually represented that they are made by us or from our patterns, and being apparently close copies, they readily deceive those who are not familiar with our machines. By this method some of them have been introduced and as their construction is invariably of inferior quality the unsuspecting buyer is imposed upon and suffers correspondingly.
We therefore call special attention to the existence of these imitations and to the fact that our machinery is conspicuously marked with our trade name, the use of which by any other manufacturer is unauthorized and illegal.
HENRY R. WORTHINGTON.

WILL YOUR WINTER BE AS PLEASANT
as the summer you have so much enjoyed?

The Novelty Furnace

will fill your house with the same warm pleasant balmy atmosphere that has made the past season delightful.

Absolutely free from gas.
No dust in the hot-air pipes.
Servants run them successfully.

Moderate in cost. Moderate in consumption.
Peculiar construction. Great durability.

IMMENSE HEATING POWER.

The large heating-surface exposed by the peculiar arrangement, enables it to constantly afford a large volume of healthfully warmed fresh air which is perfect ventilation.

The manner in which the gases are retained and the indirect passage they are forced to make extracts their principal heat endowing the furnace with

EXTRAORDINARY ECONOMICAL QUALITIES.

Send for descriptive pamphlet.
Correspondence carefully attended.

Pure Ready-Mixed Paints

We desire to call attention of consumers to the fact that we guarantee our ready-mixed paints to be made only of pure linseed oil and the most permanent pigments. They are not "Chemical," "Rubber," "Patent," or "Fire-proof." We use no secret or patent method in manufacturing them by which benzine and water are made to serve the purpose of pure linseed-oil.

Sample cards, containing fifty desirable shades sent on application.

THE BEST PREPARATION FOR HOUSEKEEPING IS A
WIRE GAUZE DOOR
As used Exclusively in the New Hub Range.

PERFECT COOKING
Is the most important item in the domestic economy. By using the Wire Gauze Oven Door with the new Hub Range, the skill of the cook is supplemented by the most perfect cooking apparatus ever made.
Three of the Hub Ranges with Wire Gauze Oven Doors are in constant use at the famous Boston Cooking-School, and are endorsed by them as being better than all others. Insist on your dealer giving you the new Hub Range. It is the very highest grade of cooking apparatus made, and when quality is considered is the lowest in price of any in the market. Over 100,000 Hub Ranges in use. The Hub line of goods are world renowned, and are sold by dealers everywhere. Special circulars sent on application.

PAGE STEAM HEATER
See last week's issue for particulars.
PAGE STEAM HEATING CO.,
NORWICH, CONN.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

WARREN'S "COMPOSITE" FELT,

For Roof Foundations.

A two-ply, composed of one layer of saturated felt and one of manilla-rope paper with a layer of cement between. Combines durability and strength with lightness and pliability, and is *absolutely* impervious to moisture. *For use under slate, shingles,* etc., it is especially valuable, since as soon as the sun comes upon the roof, the cement contained in the sheathing closes tightly around the nails that have been driven through it, and form of the sheathing itself a complete waterproof covering. It is four and one-half times stronger than ordinary roofing.

Send for Samples and Circular No. 12.

Half a Million in Use.

JENKINS BROS. VALVES

Stand at the head, are specified by architects, used in the principal public buildings, and always referred to by steam-fitters when the best is called for. The Valves contain all the late improvements — using the **genuine Jenkins Disc.** Don't be deceived into buying a cheap and inferior valve, using a worthless disc, but insist on having **Jenkins Bros. Valves** containing a **Jenkins Disc** and the only disc that will stand high pressure of steam. By so doing you avoid paying for the experiments of others — and get the best.

JENKINS BROS., { 71 John St., N. Y. / 105 Milk St., Boston. } 21 North Fifth St., Philadelphia. / 54 Dearborn St., Chicago, Ill.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of Messrs. J. & R. Lamb, on page iii. This firm first placed an advertisement in this journal, May 6, 1876 and has kept it ever since that time before our readers. The different members of this family have been carefully trained in the details of the many kinds of craftmanship which are brought into operation in their large establishment, and architects may expect as careful attention given to their work as in any similar establishment in the country.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

Acting on the supposition that architects and members of their families do not confine their reading wholly to technical literature, we have prepared for the benefit of subscribers to the "American Architect and Building News," *the following schedule of*

CLUB RATES.

		Regular Price.	Club Rate.
a.	*American Architect* (Imperial Edition), and Ticknor's Paper Series (one year, 24 numbers),	$22.00	$17.25
a[1].	*American Architect* (Regular Edition), and Ticknor's Paper Series (one year, 24 numbers),	18.00	13.25

"TICKNOR'S PAPER SERIES" consists of a semi-monthly issue of novels and light literature of the highest standard, printed in good type on fine paper. In every particular it is the endeavor to keep these publications at the head of their class. The general character and quality of the series may be inferred from the names of authors whose books are already included in the series, *e. g.*, JANE G. AUSTIN, MARY HALLOCK FOOTE, BLANCHE WILLIS HOWARD, EDWIN LASSETTER BYNNER, JULIAN HAWTHORNE, HENRY JAMES, W. D. HOWELLS, EDGAR FAWCETT, etc.

THESE BOOKS ARE MAILED FREE OF COST.

Comments of the Press on a New Book

By MERCHANT & CO.

ENTITLED:

"A TIN ROOF."

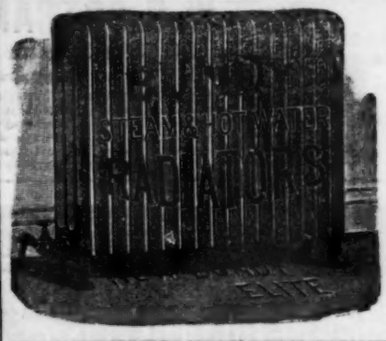
A Valuable Book.

UNDER the title "*A Tin Roof*," Messrs. Merchant & Co., Philadelphia, have published a valuable work on the subject of roofing materials. No architect can afford to be without the book, as it treats very fully on a subject with which he should be conversant. The book has been compiled by one thoroughly versed in the subject of tin roofing, and it touches on different features of the subject which have heretofore never been published, and it is to be questioned whether the information could be obtained by architects from the roofing trade. The closing paragraph of the book is as follows: "We are prepared to prove that we were the first to introduce guaranteed plates and stamp every sheet with the name of the brand and thickness; and having also done away with the imperfect or waste sheets to further protect architects (who wish to specify and property owners who want to use the best), we feel that we have a right, under these circumstances, to ask that our guaranteed brands shall not be specified along with other brands in the market, which are inferior in quality, coating, weight and assortment." Architects throughout the country will do well to secure a copy of the book, which can be done by addressing Merchant & Co., Philadelphia.—*Philadelphia Evening Call*, February 18, 1889.

Something Worth Reading.

"*A Tin Roof*" is the title of a little book just issued by Messrs. Merchant & Co., 517 Arch Street, Philadelphia. The purpose of the publication is to supply to builders, architects, and the general public some exact information as to the best methods of constructing a tin roof and as to the right materials to be used to secure satisfactory and permanent results. We especially recommend the book, which is intended for gratuitous distribution, to mill-owners. They are very apt to entrust the matter of roofing wholly to builders, and they usually know very little about the character of the tin used or the excellence or defectiveness of the job. This pamphlet will help them to protect their interests. It is very explicit, perfectly comprehensible, and we think wholly trustworthy. It is quite profusely illustrated, and the cuts indicate processes of applying tin-roofing which insure excellence.—*Philadelphia Telegraph*, February 16, 1889.

MESSRS. MERCHANT & CO., of Philadelphia, are about to issue a work on the subject of tin roofing for the benefit of architects, which they have had compiled at considerable expense and labor by one thoroughly versed in the subject of tin roofing. It touches on different features of the subject which have heretofore never been published. While this work is issued partly as an advertisement of their guaranteed plates, it will be found to contain very valuable information. It is for distribution to those who want the information, though it is not their purpose to send it out broadcast, as it is too valuable a work in itself to go into the waste basket. The book will be nicely bound, and the title will be "*A Tin Roof*." Messrs. Merchant & Co., have done all in their power to bring about the use of a better class of material, and were the first to introduce plates every sheet stamped with the brand and thickness, and as the doing away with the wasters, or imperfect sheets, has been the cause of great loss of profit to this concern, in their determination to keep faith with the architectural profession, they find that in some cases even leading architects are to-day simply using their brands as a figure-head, and are inserting in their specifications not only cheaper brands than theirs, but brands the wasters of which can be obtained and will be used. Consequently they have now taken the stand to simply ask the architect to drop their brands entirely if they are to be used with inferior goods, as they do not care to be held responsible by their clients when the roof proves inferior by reason of the use of cheaper material than they offer to the public.—From *Manufacturers' Record*, Baltimore, of February 9, 1889.



Bundy Elite RADIATORS.

Comments of Prominent Architects.

"Your Elite Radiator is the most artistic of any on the market." "Best on earth." "Circulates beautifully." "Occupies less floor space." "My Clients prefer them to any other." "They are clean, handsome and very powerful heaters."

"The American Architect Scholarship."

THE TRAVELLING SCHOLARSHIP,

Established by the American Architect and Building News,

IS open only to subscribers to the Imperial Edition of that journal (without distinction of sex or color) who may dwell in any part of the United States, under the following general conditions:

1. The applicant must be a citizen of the United States.
2. Subscriptions to the Imperial Edition must be prepaid *in full* direct to the publishers.
3. At the time of filing notice of intention to compete, the applicant must be between the ages of twenty and twenty-five years. It is desirable that notice should be filed with the editors before May 15, 1889.
4. The applicant must have served for at least two years in offices of members of the American Institute of Architects, or of the Western Association of Architects. A graduate's diploma granted by a technical school will be accepted in lieu of one of these years' of office-work.
5. Applicants must undergo examination in:
   - *a.* Drawing — free-hand and mechanical.
   - *b.* Architectural Design.
   - *c.* Elements of Construction.
   - *d.* History of Architecture.
   - *e.* English Composition.
   - *f.* One Foreign Language.
   - *g.* Elements of Sanitation, Heating and Ventilating.

   The exact date and place of examination will be announced later.
6. An examination fee of $5.00 for the benefit of the examiners will be required.
7. The appointee must take his departure within six weeks of receiving notice of appointment. One hundred dollars will be paid to him at the time of taking ocean passage and the balance of the scholarship in monthly instalments of $33.33.
8. The course of travel and study while abroad will be outlined by the editors of the *American Architect*.

December 22, 1888.

TICKNOR & COMPANY, Publishers, 211 Tremont Street, Boston.

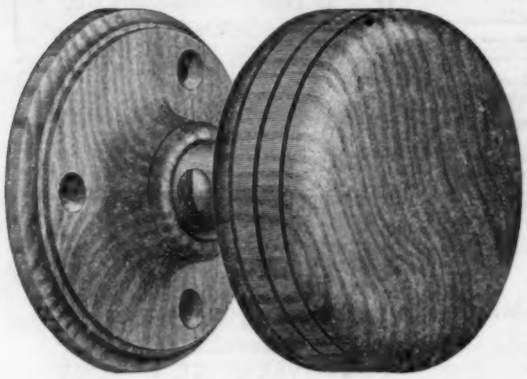
Bids or proposals for furnishing the roof, double-doors, windows, railing, floor-plates and copper-leaders, including the furnishing of all the materials, labor, transportation, etc., necessary or required to put the same in complete working order at the Ardsley Gate House, on Section 7 of the new aqueduct, as called for in the approved forms of contract and

Bardsley's Patent Wood Door Knobs.



The most desirable medium priced KNOBS in the market. Handsome in appearance, beautifully and durably finished, and pleasant to the hand. Every Knob warranted not to come loose or give out in any way. Besides the regular woods which we carry in stock, we make them to match special trim in such woods as Sycamore, Hazel, Birch, Whitewood, Yellow Pine, etc,

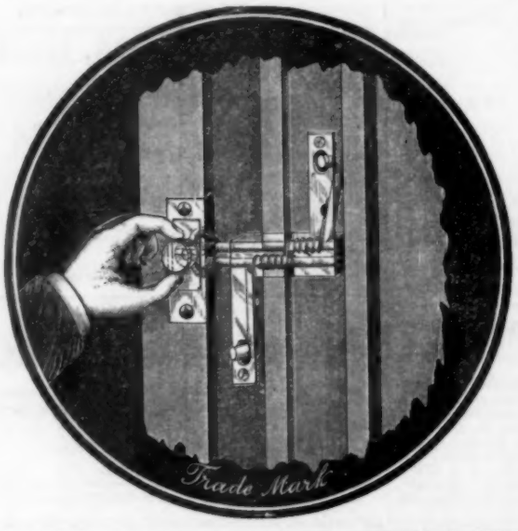
The engraving represents No. 116 Knob, list price, **$6.50 per dozen pairs.** We also have Door Stops and Shutter Knobs, hand-turned and polished to match the Door Knobs, which cost but little more than the common goods.

Price List on application.

J. BARDSLEY, 59 Elm St, New York,

— AND —

The Yale & Towne M'f'g Co., {NEW YORK, BOSTON, PHILADELPHIA AND CHICAGO.



THE

TIMBY BURGLAR-PROOF SASH-LOCK

— AND —

VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

JENKINS & TIMBY

THE DETACHABLE EMPIRE SASH CORD FASTENER.

(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful invention for Window Sashes ever put on the market. Every window requires them.

Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the

EMPIRE PORTABLE FORGE CO., Cohoes, N. Y., U. S. A.

THE BOWER SEWER-GAS TRAP.

A positive valve-seal and a sound water-seal! The most effective trap that is offered to the public! A combined valve and water seal! With or without the valve it is the surest water seal! Sure in action! Simple in construction! Cheap! Durable!

The most perfect barrier against Sewer Gas.

Illustrative and descriptive 48-page pamphlet sent free on application.

B. P. BOWER & CO.,

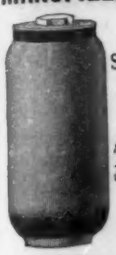
Cleveland, - Ohio.

Sanitary Appliances

THE
MANSFIELD COMPRESSED LEAD TRAP.

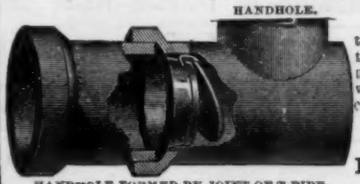


SAFEST IN ACTION.
CHEAPEST IN ECONOMY.
Requires no Ventilation.

The Surest protection against Sewer Gas. Is endorsed by all Architects as being the best Trap in the market.

Manufactured only by the
BOSTON & LOCKPORT BLOCK CO.
162 Commercial St., BOSTON, MASS.
For Sale by the Plumbers' Trade Generally.

Protect yourselves against Sewer Gas and Back Water by using
The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.
Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.
Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe



HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on appucation.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

McCLELLAN
Anti-Siphon Trap Vent
Safest and Most Economical

WESTERLY, - - - R. I.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'

English Shingle Stain.

A. B. RICH, Agent, Office, D. B. Crockett Co., 84 William St., N. Y.
FELTON, RAU & SIBLEY, Agents, Philadelphia, Pa.
H. M. HOOKER, Agent, 57 W. Randolph St., Chicago, Ill.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any "*gas oil*" or "*dead oil*" which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

IMPORTANT

To Architects, Builders, House-Painters, Decorators, Boat-Builders and Yachtsmen, desiring an EXTREMELY DURABLE Finish for wood.

Are superior to any Varnishes or Wood-Finishes in the market, for the following reasons, viz.:—

They possess more body, higher lustre, greater resisting properties to atmospheric influences, action of water & alkali, are more elastic, will not scratch or mar white, and are more durable.

ROSENBERG'S TRADE ELASTICA MARK REGISTERED FINISHES NO. 1 & NO. 2.

For all classes INSIDE WORK, Requiring extreme durability, use No. 2 ELASTICA FINISH.

For OUTSIDE WORK, Requiring extreme durability, use No. 1 ELASTICA FINISH

Sanitary Appliances

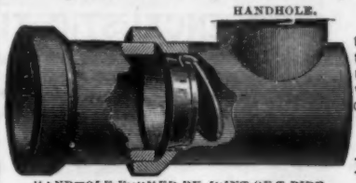
THE
MANSFIELD COMPRESSED LEAD TRAP.

SAFEST IN ACTION.
CHEAPEST IN ECONOMY.
Requires no Ventilation.

The Surest protection against Sewer Gas. Is endorsed by all Architects as being the best Trap in the market.

Manufactured only by the
BOSTON & LOCKPORT BLOCK CO.
162 Commercial St., BOSTON, MASS.
For Sale by the Plumbers' Trade Generally.

Protect yourselves against Sewer Gas and Back Water by using
The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.
Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.
Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe



HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on appucation.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an Iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

McCLELLAN
Anti-Siphon Trap Vent
Safest and Most Economical

Device for Venting **Sewer-Gas** Traps.

Can be attached to any Trap at Less than Half the Cost of back-air pipes.

APPROVED BY
ARCHITECTS, MASTER PLUMBERS AND HEALTH AUTHORITIES.

MANUFACTURED BY THE
DU BOIS MAN'F'G CO.
245 Ninth AVE., New York.
Manufacturers of
The Celebrated Du Bois Lead Trap.
For Sale by all Jobbers in Plumbers' Supplies. Send for Circular.

MADE ONLY BY
THE SMITH & EGGE MANUFACTURING CO.,
BRIDGEPORT, CONN.

The most reliable and economical article in the market for the purpose. GREAT TENSILE STRENGTH Does not corrode; does not lose its vitality by continuous use, or exposure to the elements; runs over any pulley, and gives satisfaction wherever it is used. Fixtures made of steel wire, is very simple and easily applied. Prices very low. Samples sent to any architect in the United States, free, on application. Now in use in State House, Hartford; Providence City Hall; Singer Building, Chicago; J. C. Flood's, Menlo Park, Cal.; Vanderbilt and Florence Flats, New York; Borel Building, New York; new State War and Navy Departments, and Patent Office, Washington, D. C.; *Herald* Building, Boston, and very many other fine buildings in all parts of the United States.

MANUFACTURERS OF
Fine Bronze Hardware, Bank, Office and Stoop Railings in Bronze or Brass. Antique Furniture-Trimmings. Electrical and Mechanical Bell-Hanging Burglar-Alarms.
Warerooms, 1180 BROADWAY. Factory, 157-163 WEST 29th STREET, NEW YORK, N. Y.

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE CELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH.'

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.

This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

Something New for the Stable.

Read's Patent Harness Bracket.

An Article long wanted but never before made.

Holds the whole harness, takes no more room than the ordinary hook or peg, can be used for both single and double harness. Gives the harness-case a neat appearance, as it carries the harness up uniformly in width with the saddle, beside keeping the bridle and breastplate in their proper shape. They are neatly japanned, with gilt facings. Price $18 per dozen. Are now in use in over 100 first-class private stables in and about Boston.

Each bracket lettered "J. J. Read, Boston, Mass." For sale by dealers everywhere.

Indorsed and approved by the following named gentlemen, all of whom have them in use:

Boston: R. H. White, J. Montgomery Sears, J. T. Morse, Jr., Thos. Motley. South Boston: Benjamin Dean. Cambridge: F. A. Kennedy, John Bartlett, Chas. H. Gass. Portsmouth, N. H.: Hon. Frank Jones. Milton: Col. H. S. Russell, J. Malcolm Forbes. Dedham: A. W. Nickerson. Baltimore, Md: J. D. Mallory. Newton: J. C. Potter, C. E. Billings, A. R. Mitchell. Waltham: J. H. Ellison. Readville: C. G. White. Beverly: Dr. Chas. Haddock. Swampscott; C. P. Curtis. Boston, Mass.: Waldo Adams, with the Adams Express Co. Philadelphia, Pa.: Edward N. Williams, of the Baldwin Locomotive Works.

The public are cautioned against all similar brackets, not marked with my stamp, as such brackets are infringements of patents held by me.

Also cedar-top riding-saddle bracket. Price $3.50 each. And whip-rack for English coach and straight whip combined. Price 50 cents each.

JAMES J. READ, 13 Tremont Row, Room 10.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
CUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of the Whittier Machine Co., on page iii. This firm first placed an advertisement in this journal, Oct. 14, 1876, and has kept it ever since that time before our readers. A glance at that page will show that although the widely celebrated elevators are the product with which architects everywhere are most familiar there are many other kinds of work in iron and steel in the execution of which this concern is equally expert.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

ELECTRIC TIME DIAL.

Hartman's Patent Inside Sliding Blind.

A great improvement over all other blinds, slide up and down in the window like sash, move easily, and stay where placed. No hinges, hence no swinging, sagging and tangling with curtains and window drapery. Must be *seen* to be appreciated. Excel *any other sliding blind* in the market for *economy, durability, style, beauty, convenience, etc.* Also the most perfect arrangement for Fly Screens, consisting of an additional section which slides same as the blinds; very much admired by all.

They are also made to slide entirely down to the floor, into pocket, out of sight, without any additional expense. 25 per cent. cheaper than the hinged blind, and *will last double the length of time.*

No more an experiment; tens of thousands now in use. Architects are specifying them. They always give satisfaction.

The only blind that is furnished with an *Automatic Burglar-Proof Lock, free of charge.*

Agents wanted everywhere. Send for illustrated catalogue and prices to

THE BROOKLYN BRIDGE RESTS ON NORTON'S CEMENT.

THE TRUSTEES OF THE NEW YORK AND BROOKLYN BRIDGE,
BROOKLYN, August 9, 1883.

MR. F. O. NORTON,
Dear Sir:

During the construction of the New York and Brooklyn Bridge upwards of 100,000 barrels of your cement were used. The concrete with which the caissions were filled was made with your Cement, and the entire weight of the towers rests upon it.

Your Cement has always had the preference at the same price other cements were offered for, and during part of the time in important parts of the work it was selected, even at a higher price, on account of its superiority, especially in the points of uniformity of quality and fineness.

Without hesitation I can recommend your Cement to those desiring a good and reliable article. Very truly yours,

C. C. MARTIN,
Chief Engineer and Superintendent.

F. O. NORTON,
92 Broadway, NEW YORK.

Comments of the Press on a New Book

By MERCHANT & CO.

ENTITLED:

"A TIN ROOF."

A Valuable Book.

UNDER the title "*A Tin Roof*," Messrs. Merchant & Co., Philadelphia, have published a valuable work on the subject of roofing materials. No architect can afford to be without the book, as it treats very fully on a subject with which he should be conversant. The book has been compiled by one thoroughly versed in the subject of tin roofing, and it touches on different features of the subject which have heretofore never been published, and it is to be questioned whether the information could be obtained by architects from the roofing trade. The closing paragraph of the book is as follows: "We are prepared to prove that we were the first to introduce guaranteed plates and stamp every sheet with the name of the brand and thickness; and having also done away with the imperfect or waste sheets to further protect architects (who wish to specify and property owners who want to use the best), we feel that we have a right, under these circumstances, to ask that our guaranteed brands shall not be specified along with other brands in the market, which are inferior in quality, coating, weight and assortment." Architects throughout the country will do well to secure a copy of the book, which can be done by addressing Merchant & Co., Philadelphia.—*Philadelphia Evening Call*, February 18, 1889.

Something Worth Reading.

"*A Tin Roof*" is the title of a little book just issued by Messrs. Merchant & Co., 517 Arch Street, Philadelphia. The purpose of the publication is to supply to builders, architects, and the general public some exact information as to the best methods of constructing a tin roof and as to the right materials to be used to secure satisfactory and permanent results. We especially recommend the book, which is intended for gratuitous distribution, to mill-owners. They are very apt to entrust the matter of roofing wholly to builders, and they usually know very little about the character of the tin used or the excellence or defectiveness of the job. This pamphlet will help them to protect their interests. It is very explicit, perfectly comprehensible, and we think wholly trustworthy. It is quite profusely illustrated, and the cuts indicate processes of applying tin-roofing which insure excellence.—*Philadelphia Telegraph*, February 16, 1889.

MESSRS. MERCHANT & CO., of Philadelphia, are about to issue a work on the subject of tin roofing for the benefit of architects, which they have had compiled at considerable expense and labor by one thoroughly versed in the subject of tin roofing. It touches on different features of the subject which have heretofore never been published. While this work is issued partly as an advertisement of their guaranteed plates, it will be found to contain very valuable information. It is for distribution to those who want the information, though it is not their purpose to send it out broadcast, as it is too valuable a work in itself to go into the waste basket. The book will be nicely bound, and the title will be "*A Tin Roof*." Messrs. Merchant & Co., have done all in their power to bring about the use of a better class of material, and were the first to introduce plates every sheet stamped with the brand and thickness, and as the doing away with the wasters, or imperfect sheets, has been the cause of great loss of profit to this concern, in their determination to keep faith with the architectural profession, they find that in some cases even leading architects are to-day simply using their brands as a figure-head, and are inserting in their specifications not only cheaper brands than theirs, but brands the wasters of which can be obtained and will be used. Consequently they have now taken the stand to simply ask the architect to drop their brands entirely if they are to be used with inferior goods, as they do not care to be held responsible by their clients when the roof proves inferior by reason of the use of cheaper material than they offer to the public.—From *Manufacturers' Record*, Baltimore, of February 9, 1889.

PROPOSALS.

COURT-HOUSE.
[At Savannah, Ga.]

OFFICE OF COMMISSIONERS AND EX-OFFICIO JUDGES, CHATHAM COUNTY, GEORGIA, SAVANNAH, GA., February 4, 1889.

Sealed proposals will be received at this office **until 12 o'clock M. on Monday, April 1, 1889,** for the material and workmanship required in the erection of a new court-house for Chatham County, in the city of Savannah.

Proposals will be received in lump for the whole work, and also separate bids for stonework, brick and terra-cotta work, tin and galvanized-iron work, carpenters' work, plastering, plumbing and gas-fitting, steam-heating, iron and steel work, etc.

Payments will be made to the contractors in the following manner on the certificate of the architect, to wit:

Eighty-five (85) per cent of the value of the work done, and of material delivered on the ground, will be paid monthly as the work progresses, and the balance at its completion and acceptance by the architect.

The contractor or contractors to whom this work may be awarded will be required, in pursuance of Section 493 (c) of the Code of Georgia, to give bond for the faithful performance of the contract, and to indemnify the county for any damages occasioned by a failure to perform the same within the prescribed time.

The right is reserved to reject any and all bids that may be submitted under this notice.

Proposals must be sealed and endorsed with a statement whether for the whole or a particular portion of the work.

Plans can be seen at this office and at the office of W. G. Preston, Esq., architect, No. 186 Devonshire Street, Boston, Mass., and printed specifications will be furnished on application at either office.

THE DETACHABLE EMPIRE SASH CORD FASTENER.

(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful invention for Window Sashes ever put on the market. Every window requires them.

Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the

For Hydraulic Elevators, Town Water Supply or Railway service. Special Engines for Electric-Light work. Unequalled for running Elevators, Wood-Tools, or any kind of Machinery.

Guaranteed to consume 25 to 75 per cent less gas than any other Gas Engine doing the same work.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'

English Shingle Stain.

A. B. RICH, Agent, Office, D. B. Crockett Co., 84 William St., N. Y.

FELTON, RAU & SIBLEY, Agents, Philadelphia, Pa.

H. M. HOOKER, Agent, 57 W. Randolph St., Chicago, Ill.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any "*gas oil*" or "*dead oil*" which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

DYCKERHOFF
PORTLAND CEMENT

Is superior to any other Portland Cement made. It is very finely ground, always uniform and reliable, and of such extraordinary strength that it will permit the addition of 25 per cent more sand, etc., than other well-known brands, and produce the most durable work. It is therefore the most economical to use. 8,000 barrels have been used in the foundations of the Statue of Liberty. Architects and those interested in Portland Cement will please send for my pamphlet, which will be mailed free on application. It contains valuable directions for the employment of Portland Cement, a table of results of the strength of the Dyckerhoff Cement when sand and broken stone in various proportions, together with tests and mixed with testimonials of eminent Engineers, Architects and Consumers.

TO ARCHITECTS AND CONTRACTORS:

We desire to call your attention to the Superior quality of **Plate Glass manufactured by the**

PITTSBURGH PLATE GLASS CO.

The Largest Plates of Glass in buildings in the cities of Chicago, Cleveland, Detroit, St. Paul, Syracuse, Pittsburgh, Philadelphia, Baltimore, and many New York buildings, were manufactured by our Company.

The only fuel used throughout both our works is **Natural Gas**; which, owing to its superior heating power and cleanliness, enables us to produce an article which **cannot be surpassed,** besides glass melted and annealed by our process with this gas, is far more durable and not so liable to break.

We make a specialty of three-sixteenths thickness for fine residences, also extra large sizes, wide and long plates for store fronts, beveled and obscured plates, skylight and floor glass.

With a capacity of 260,000 square feet monthly, we are prepared to execute all orders promptly, and invite correspondence.

NOTICE!
We desire to notify purchasers of Steam-Pumps that numerous cheap imitations of Worthington Pumps are being manufactured. It is usually represented that they are made by us or from our patterns, and being apparently close copies, they readily deceive those who are not familiar with our machines. By this method some of them have been introduced and as their construction is invariably of inferior quality the unsuspecting buyer is imposed upon and suffers correspondingly.
We therefore call special attention to the existence of these imitations and to the fact that our machinery is conspicuously marked with our trade name, the use of which by any other manufacturer is unauthorized and illegal.

WILL YOUR WINTER BE AS PLEASANT
as the summer you have so much enjoyed?

The Novelty Furnace

will fill your house with the same warm pleasant balmy atmosphere that has made the past season delightful.

Absolutely free from gas.
No dust in the hot-air pipes.
Servants run them successfully.

Moderate in cost. Moderate in consumption.
Peculiar construction. Great durability.

IMMENSE HEATING POWER.

The large heating-surface exposed by the peculiar arrangement, enables it to constantly afford a large volume of healthfully warmed fresh air which is perfect ventilation.

The manner in which the gases are retained and the indirect passage they are forced to make extracts their principal heat endowing the furnace with

EXTRAORDINARY ECONOMICAL QUALITIES.

Send for descriptive pamphlet.

Correspondence carefully attended.

(Established 1852.)
Fulton St., cor. William, New York.

Pure Ready-Mixed Paints

We desire to call attention of consumers to the fact that we guarantee our ready-mixed paints to be made only of pure linseed oil and the most permanent pigments. They are not "Chemical," "Rubber," "Patent," or "Fire-proof." We use no secret or patent method in manufacturing them by which benzine and water are made to serve the purpose of pure linseed-oil.

Sample cards, containing fifty desirable shades sent on application.

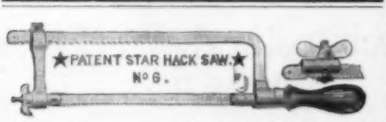
THE BRONSON BOILER
For Steam and Hot-Water Heating.
Automatic and Reliable.

With BRICK or IRON Settings, as you may prefer, The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞ We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. Reliable Agents Wanted. Send for Illustrated Catalogue and Price List.

WESTON ENGINE CO.,
Sole Manufacturers, Painted Post, N. Y.
H. J. Barron & Co., 40 Cortlandt St., New York, Sales Agents.



Both the Frames and Blades of our Star Hack Saws are now as perfect as human skill can make them. The Frame is steel, polished and Nickel plated, and will hold all blades from 3 to 12 inches, and face them in four directions. With the extra clamp, as seen in the cut, all broken blades can be used. These Saws have a file temper, and one five cent Blade will cut iron or soft steel steadily for several hours, doing more work than a dollar's worth of files.

Price of No. 6 Frame	$1 00
" " Clamp	0 10
" " Blades per doz. 55c 60c 65c 70c 85c 95c	$1 05
Inches long 6 7 8 9 10 11 12	

Frame, Blades or Clamp, sent by mail pre paid on receipt of price. Also for sale by all Hardware Dealers. All goods bearing our name are fully warranted.

PAGE STEAM HEATER
See last week's issue for particulars.
PAGE STEAM HEATING CO.,
NORWICH, CONN.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governor, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

WARREN'S "COMPOSITE" FELT,

For Roof Foundations.

A two-ply, composed of one layer of saturated Felt and one of manilla-rope paper with a layer of cement between. Combines durability and strength with lightness and pliability, and is *absolutely* impervious to moisture. *For use under slate, shingles*, etc., it is especially valuable, since as soon as the sun comes upon the roof, the cement contained in the sheathing closes tightly around the nails that have been driven through it, and form of the sheathing itself a complete waterproof covering. It is four and one-half times stronger than ordinary roofing.

Send for Samples and Circular No. 12.

IMITATION.

AN ACKNOWLEDGMENT OF SUPERIORITY.

The best evidence that the JENKINS BROS. VALVES, JENKINS STANDARD PACKING, and JENKINS DISCS have extraordinary merit, and are held in high esteem by the public, is that they are being *imitated* and *counterfeited*. The imitations resemble the original in appearance only; they lack the general excellence of the genuine. Our friends and customers will sustain us in our endeavor to manufacture the best goods, by not accepting any goods unless stamped as above. This notice has become necessary by the fraudulent use of our name, and to protect the public from being deceived—by unprincipled parties placing imitations on the market.

ONE OF OUR OLDEST ADVERTISERS.

We ask attention this week for the advertisement of the Yale & Towne Mfg. Co., on page iii. This firm first placed an advertisement in this journal, May 13, 1876, and has kept it ever since that time before our readers. A glance at that page will show that although the widely celebrated locks are the product with which architects everywhere are mos familiar, there are many other kinds of hardware and fine machine work, in metals of all kinds, in the execution of which this concern is equally famous.

PERSPECTIVE DRAWING.

The *American Architect* Drawing-Office will undertake the preparation of perspective drawings in line or color from scale drawings, or will render drawings already in outline. Address the editors.

WANTED.

FURNITURE DESIGNER. — Wanted a good furniture designer at Kimbel & Sons, New York, 7 and 9 East Twentieth St. 689

WANTED.

POSITION. — Wanted a position as draughtsman in a large Eastern city office by an architect of seven years' practice in the city of New Britain, Conn. New York preferred. For further particulars address John J. McCarthy, architect, New Britain, Conn. 694

THE DETACHABLE EMPIRE SASH CORD FASTENER.
(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful nvention for Window Sashes ever put on the market. Every window requires them.

Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the
EMPIRE PORTABLE FORGE CO., Cohoes, N. Y., U. S. A.

Established 1858.

H. W. JOHNS'
ASBESTOS PATENTED ROOFING
FIRE PROOF.

This is the perfected form of Portable Roofing manufactured by us for the past thirty years: is adapted for use on steep or flat roofs in all climates, can be easily applied by unskilled workmen, and costs only about half as much as tin. *Samples and descriptive price list free by mail.*

H. W. JOHNS' MFG. CO. 87 Maiden Lane, N. Y.

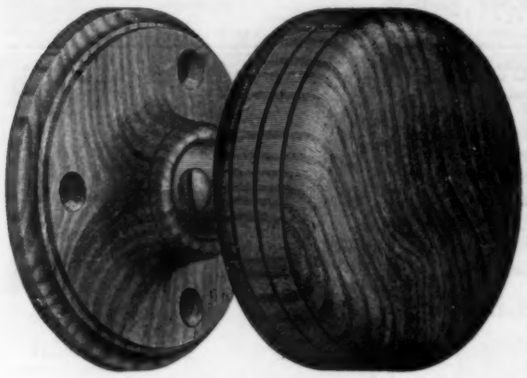
Bardsley's Patent Wood Door Knobs.



The most desirable medium priced KNOBS in the market. Handsome in appearance, beautifully and durably finished, and pleasant to the hand. Every Knob warranted not to come loose or give out in any way. Besides the regular woods which we carry in stock, we make them to match special trim in such woods as Sycamore, Hasel, Birch, Whitewood, Yellow Pine, etc,

The engraving represents No. 116 Knob, list price, $6.50 per dozen pairs. We also have Door Stops and Shutter Knobs, hand-turned and polished to match the Door Knobs, which cost but little more than the common goods.

Price List on application.

THE

TIMBY BURGLAR-PROOF

SASH-LOCK

—AND—

VENTILATOR

One Lock only required for a Window. It locks either or both sash securely in any position desired, thereby affording the means of Perfect Ventilation; also absolute security against Burglars and Sneak-Thieves.

Its simplicity, automatic action, strength, ventilating qualities and adaptability to varying thicknesses of sash or inside stops, render it more desirable than any other Sash-Lock now offered in the market.

Manufactured from the best Malleable Iron, Steel, Brass and Bronze Metal

[*Continued on page* xvi.]

Comments of the Press on a New Book
By MERCHANT & CO.
ENTITLED:
"A TIN ROOF."

A Valuable Book.

UNDER the title "*A Tin Roof*," Messrs. Merchant & Co., Philadelphia, have published a valuable work on the subject of roofing materials. No architect can afford to be without the book, as it treats very fully on a subject with which he should be conversant. The book has been compiled by one thoroughly versed in the subject of tin roofing, and it touches on different features of the subject which have heretofore never been published, and it is to be questioned whether the information could be obtained by architects from the roofing trade. The closing paragraph of the book is as follows: "We are prepared to prove that we were the first to introduce guaranteed plates and stamp every sheet with the name of the brand and thickness; and having also done away with the imperfect or waste sheets to further protect architects (who wish to specify and property owners who want to use the best), we feel that we have a right, under these circumstances, to ask that our guaranteed brands shall not be specified along with other brands in the market, which are inferior in quality, coating, weight and assortment." Architects throughout the country will do well to secure a copy of the book, which can be done by addressing Merchant & Co., Philadelphia.—*Philadelphia Evening Call*, February 18, 1889.

Something Worth Reading.

"*A Tin Roof*" is the title of a little book just issued by Messrs. Merchant & Co., 517 Arch Street, Philadelphia. The purpose of the publication is to supply to builders, architects, and the general public some exact information as to the best methods of constructing a tin roof and as to the right materials to be used to secure satisfactory and permanent results. We especially recommend the book, which is intended for gratuitous distribution, to mill-owners. They are very apt to entrust the matter of roofing wholly to builders, and they usually know very little about the character of the tin used or the excellence or defectiveness of the job. This pamphlet will help them to protect their interests. It is very explicit, perfectly comprehensible, and we think wholly trustworthy. It is quite profusely illustrated, and the cuts indicate processes of applying tin-roofing which insure excellence.—*Philadelphia Telegraph*, February 16, 1889.

MESSRS. MERCHANT & CO., of Philadelphia, are about to issue a work on the subject of tin roofing for the benefit of architects, which they have had compiled at considerable expense and labor by one thoroughly versed in the subject of tin roofing. It touches on different features of the subject which have heretofore never been published. While this work is issued partly as an advertisement of their guaranteed plates, it will be found to contain very valuable information. It is for distribution to those who want the information, though it is not their purpose to send it out broadcast, as it is too valuable a work in itself to go into the waste basket. The book will be nicely bound, and the title will be "*A Tin Roof*." Messrs. Merchant & Co., have done all in their power to bring about the use of a better class of material, and were the first to introduce plates every sheet stamped with the brand and thickness, and as the doing away with the wasters, or imperfect sheets, has been the cause of great loss of profit to this concern, in their determination to keep faith with the architectural profession, they find that in some cases even leading architects are to-day simply using their brands as a figure-head, and are inserting in their specifications not only cheaper brands than theirs, but brands the wasters of which can be obtained and will be used. Consequently they have now taken the stand to simply ask the architect to drop their brands entirely if they are to be used with inferior goods, as they do not care to be held responsible by their clients when the roof proves inferior by reason of the use of cheaper material than they offer to the public.—From *Manufacturers' Record*, Baltimore, of February 9, 1889.

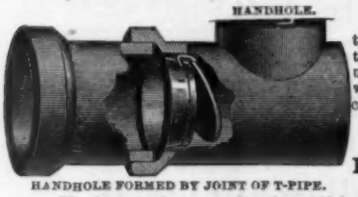
Sanitary Appliances

Protect yourselves against Sewer Gas and Back Water by using

The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.

Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.

Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe



HANDHOLE FORMED BY JOINT OF T-PIPE.

This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on application.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an Iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.

"THE CAST SINK MUST GO."

PROPOSALS.

PROPOSALS FOR DREDGING.—United States Engineer Office, Cleveland, O., February 9, 1889. Sealed proposals, in duplicate, will be received at this office until 12 o'clock M., on Saturday, the 9th day of March, 1889, and then opened, for excavating 920,000 cubic yards, more or less, of material from Maumee Bay along line of proposed straight channel for Toledo Harbor, O. Preference will be given to materials and plant of domestic production or manufacture, conditions of quality and price (import duties included) being equal. The attention of bidders is invited to Acts of Congress approved February 26, 1885, and February 23, 1887, Vol. 23, page 332, and Vol. 24, page 414, statutes at large. All information can be obtained at this office. The United States reserves the right to reject any or all proposals. L. COOPER OVERMAN, Major of Engineers. 689

FURNITURE. [At Cincinnati, O.]

Sealed proposals will be received at the office of Clerk of the Board of Education, Public Library Building, **until 12 o'clock, noon, Monday, March 11, 1889,** for school furniture, castings, etc., for the remainder of the current school year, according to specifications on file in said office.

Each bid must contain the name of every person interested therein, and must be accompanied by a guaranty in the sum of $1,000 of some disinterested person, that if the bid is accepted a contract will be entered into and the performance of it properly secured.

Bids must be upon blank forms, to be obtained in the above office.

Bids must be plainly marked "Proposals for Furniture."

The Board reserves the right to reject any or all bids.

SAMUEL WEIL, JR.,
689 Chairman Furniture Committee.

HOSPITAL. [At Cincinnati, O.]

SUPERINTENDENT'S OFFICE,
CINCINNATI HOSPITAL, February 9, 1889.

Sealed proposals will be received at this office **until 4 o'clock** P. M., **March 13, 1889,** for additions to and improvements of the hospital buildings, consisting of extensions, alterations, a new amphitheatre, addition to library, and a new gasometer.

Plans and specifications may be seen at the office of A. C. Nash, architect, 36 and 34 Carlisle Building.

The Board of Trustees reserves the right to reject any or all bids.

By order of the Board.

T. E. H. McLEAN,
689 Superintendent.

THE J. L. MOTT IRON WORKS,

For Hydraulic Elevators, Town Water Supply or Railway service. Special Engines for Electric-Light work. Unequalled for running Elevators, Wood-Tools, or any kind of Machinery.

Guaranteed to consume 25 to 75 per cent less gas than any other Gas Engine doing the same work.

Warner's Steam Water Filter.

VERY little progress has heretofore been made in the construction of Filters for purifying water for Steam Boilers on a large scale. In this direction we have accomplished what has never been done before. Warner's Filter will free water from all organic matter arising from the presence of animal or vegetable matter. It will free the water *from all lime and combinations of lime, such as constitute "hard" water.* The water passes off into the boilers as pure as if condensed from steam or vapor under the most favorable circumstance. It saves 45 per cent of fuel, as computed by French engineers. The use of this Filter will double the length of the life of a boiler.

The water passing through this Filter may be used not only for all mechanical purposes, but for medicinal purposes as well, the same as water filtered or distilled by druggists.

For Pamphlets and other information address

THE STEAM WATER FILTER CO., Limited,

26 South Third Street, Philadelphia, Pa.

DEXTER BROTHERS'

English Shingle Stain.

A. B. RICH, Agent, Office, D. B. Crockett Co., 84 William St., N. Y.

FELTON, RAU & SIBLEY, Agents, Philadelphia, Pa.

H. M. HOOKER, Agent, 57 W. Randolph St., Chicago, Ill.

OUR STAINS are made from the best English Colors and pure Linseed oil with preserving ingredients. They do not contain any *"gas oil"* or *"dead oil"* which has the smell of *Creosote*, and we guarantee that all our samples have been dipped in our original stain.

WE CLAIM superiority of color which will not wash off and will retain its brightness long after other stains have faded or turned black. Our Stain has been thoroughly tested by many of the leading Architects in this country during the past four or five years, and we have received many flattering testimonials. We will send a package of Stained Boards, by mail, to any address, on application. These small Sample Boards give but an imperfect idea, however, of the beauty of the Stain, as the effect of Stained Shingles can only be seen in a mass on the house.

ONE GALLON OF OUR STAIN will dip about 500 Shingles, or cover about 1500 shingles, when brushed on. Please note number on Sample Boards. We would advise Architects to specify as follows:

"DEXTER BROTHERS' ENGLISH SHINGLE STAIN."

DEXTER BROTHERS,

SOLE MANUFACTURERS,

55 and 57 Broad Street, - - BOSTON, MASS.

For sale by all Jobbers and Dealers in Tinners' Supplies throughout the country.

Correspondence Solicited, and Lowest Prices Guaranteed.

THE ONLY REAL

EXPANDING CONDUCTOR.

THE IRWIN & REBER

PATENT

EXPANDING WATER CONDUCTOR.

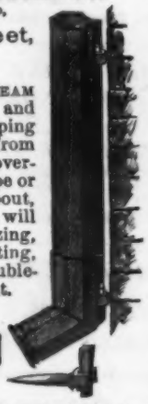
MANUFACTURED BY THE

S. S. S. Conductor Co.

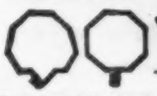
LIMITED,

163 Lacock Street,

ALLEGHENY, PA.



The Standing Seam allows of an easy and secure fastening, keeping the pipe far enough from the wall to make any overflow from the eave pipe or head, run down the spout, and not the wall; and will open, in case of freezing, so as to prevent bursting, and still remain double-locked and water-tight.



Made in 6-foot lengths, in a single sheet of

SOFT STEEL,

Either Galvanized, Kalameined or Leaded.

AGENTS FOR NEW ENGLAND STATES.

E. B. BADGER & SON.

Coppersmiths & Galvanized Iron Workers.

Nos. 63 & 65 Pitts St.,

BOSTON, MASS.

Best Conductor of all.

RITCHIE'S

Corrugated Expanding

Conductor.

Guaranteed no Infringement.

This pipe has all the advantages of other corrugated conductors in not bursting from freezing, and in addition:

It has no soldered joints.

The enlarged coupling makes the conductor of even size inside throughout.

It is galvanized, after formation, great care being taken to secure a smooth coating of zinc free from dross and impurities.

MANUFACTURED BY

LAMB & RITCHIE,

Boston Spiral Tube Works,

CAMBRIDGEPORT, MASS

AESCHLIMANN & PELLARIN,

Successors to J. Pasquali & C. Aeschlimann.

Manufacturers of Roman and Venetian

"The American Architect Scholarship."

THE

TRAVELLING-SCHOLARSHIP

ESTABLISHED BY THE

American Architect and Building News

IS open only to subscribers to the Imperial Edition of that journal (without distinction of sex or color) who may dwell in any part of the United States, under the following general conditions:

1. The applicant must be a citizen of the United States.
2. Subscription to the Imperial Edition must be prepaid *in full* direct to the publishers.
3. At the time of filing notice of intention to compete, the applicant must be between the ages of twenty and twenty-five years. It is desirable that notice should be filed with the editors before May 15, 1889.
4. The applicant must have served for at least two years in offices of members of the American Institute of Architects, or of the Western Association of Architects. A graduate's diploma granted by a technical school will be accepted in lieu of one of these years' of office-work.
5. Applicants must undergo examination in:
   - *a.* Drawing — free-hand and mechanical.
   - *b.* Architectural Design.
   - *c.* Elements of Construction.
   - *d.* History of Architecture.
   - *e.* English Composition.
   - *f.* One Foreign Language.
   - *g.* Elements of Sanitation, Heating and Ventilating.

   The exact date and place of examination will be announced later.
6. An examination fee of $5.00 for the benefit of the examiners will be required.
7. The appointee must take his departure within six weeks of receiving notice of appointment. One hundred dollars will be paid to him at the time of taking ocean passage and the balance of the scholarship in monthly instalments. of $33.33.
8. The course of travel and study while abroad will be outlined by the editors of the *American Architect.*

December 22, 1888.

ESTABLISHED 1868
THE HAYES
SKYLIGHTS

71-81 AVE. NEW YORK. BY C.C. HAYES.

"SKETCHES ABROAD."

By J. A. SCHWEINFURTH, Architect.

A PORTFOLIO of sketches of interesting and useful examples of architecture, details, etc., never before published, and for the most part never photographed, of work of peculiar interest to architects at the present time. These sketches were made during a nine months' tour of study abroad, in Italy, France, Spain, and in the South-Kensington Museum, during the year 1886. The work is as interesting to the non-professional as it is useful to the architect in his daily work in design, not only in reference to detail, but as to mass and grouping.

The author has found, away from beaten paths, interesting examples of the old *manoirs*, or French manor-houses, and *chateaux*. Among the plates are presented several of these *manoirs;* half-timbered houses with details, from Normandy and Brittany; work of the period of Francis I; towers, *chateaux;* details from the Italian and French Renaissance; Romanesque and Byzantine work of Venice and Ravenna, and the Romanesque of Auvergne; wrought-iron from Venice and from Spain, and from the South-Kensington Museum.

This work contains 30 plates, reproduced in *fac-simile* from the author's sketches in pen; pencil, and water colors, by the most approved processes, and printed on 15″ x 20″ heavy plate paper, in specially designed portfolio.

The price of the work is $15.00. Subscriptions may be sent to

TICKNOR & CO., 211 Tremont Street, Boston, Mass.

NATURAL WOOD FINISHING.

FOR FINISHING THE INTERIOR WOOD-WORK OF YOUR HOUSE USE THE ELEBRATED AND ONLY GENUINE

"BERRY BROTHERS'"

"HARD OIL FINISH."

This article has been in general use for the past fifteen years, and is acknowledged the standard for house-finishing. It preserves the natural color of the wood and increases the beauty of the grain.

As its great success has brought out imitations, be sure that our brand or label is on every package.

We will furnish samples of finished wood on application.

BERRY BROTHERS Varnish Manufacturers, Detroit, Mich.

FOR OUTSIDE DOORS AND OTHER EXPOSED WORK USE

"BERRY BROTHERS' ELASTIC OUTSIDE FINISH."

PIPE-COVERING.

ASBESTOS

This covering is made entirely of Asbestos, and can not be affected injuriously by heat or dampness, nor can it be made a harbor for vermin.

Asbestos Building-Felt, Fire-Proof Cements, &c.

THE DETACHABLE EMPIRE SASH CORD FASTENER.

(Patent Applied for.)

The simplest and best method of attaching Sash Cords to Window Sashes ever invented, and a great saving in time and patience in putting in and taking out Window Sashes.

The most useful invention for Window Sashes ever put on the market. Every window requires them.

Reasons why you should use them: It cost less than one and one-half cents per Sash; requires no nails or screws; can be put up in or taken out in less than one minute; prevents the knot from fraying out and getting between the sash and frame; does not split the sash like nails or screws; prevents the cord from running back into the weight pocket. Manufact'd by the EMPIRE PORTABLE FORGE CO., Cohoes, N. Y., U. S. A.

Heating Apparatus.

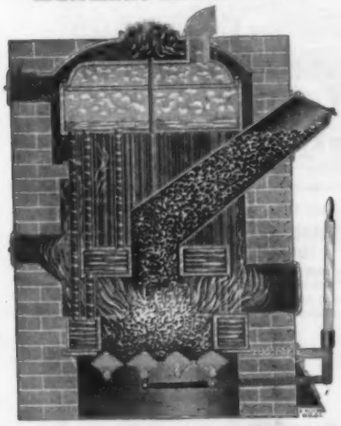
The GOODWIN GAS STOVE & METER CO.,
MANUFACTURERS OF
The Sun Dial Gas Cooking and Heating Stoves.

The most economical in use. Over 100 different kinds. Suitable for Families, Hotels, Restaurants and Public Institutions. Laundry, Hatters' and Tailors' Heaters. Hot Plates, Warming-Closets for Pantries. Hot-Water Generators, etc., etc.

1019-1018 Filbert Street, Philadelphia.

4 W. 14th St., New York.
76 Dearborn Street, Chicago.
Waldo Bros., Agts., 88 Water St., Boston, Mass.

THE BRONSON BOILER
For Steam and Hot-Water Heating. Automatic and Reliable.



With BRICK or IRON Settings, as you may prefer. The Bronson is constructed on scientific principles the fire surface being of the best boiler tubing that can be obtained. This boiler exposes more water to the direct action of the fire, either in steam or hot-water heating, than any boiler made. ☞We are making a specialty of a High Grade all-steel Boiler, which we are anxious to place by the side of anything in the world for actual results. Reliable Agents Wanted. Send for Illustrated Catalogue and Price List.

WESTON ENGINE CO.,

Modern Perspective.

A Treatise upon the Principles and Practice of Plane and Cylindrical Perspective.

AN INVALUABLE BOOK FOR ARTISTS, ARCHITECTS, DRAUGHTSMEN AND CIVIL ENGINEERS.

— BY —

WILLIAM R. WARE,

Professor of Architecture in the School of Mines, Columbia College.

1 vol. 12mo. 321 pages, with 27 plates in a Portfolio - - - - - - - - - $5.00

This is by far the most exhaustive of modern works on the subjects relating to perspective, plain and panoramic, and will be of great value to all architects and artists, and others interested in the problems of art. The scientific and pictorial aspects of these investigations are carefully and thoroughly considered, both independently and in their connection with drawing; and the propositions of the author are illustrated by plates of architectural objects and perspective plans.

"The book is written in clear English, free from unnecessary technicalities, and in a much more felicitous style than such text-books usually are. The plates require a prodigious quantity of careful work, and are correspondingly valuable."—*New York World.*

For sale by Booksellers; sent, postpaid, on receipt of price, by the Publishers,

TICKNOR & CO., PUBLISHERS, 211 TREMONT ST., BOSTON.

The exterior of this house is stained with
CABOT'S CREOSOTE STAIN
for Shingles, Fences, Clapboards Etc

These Stains are very durable and give a much more artistic effect than paint, while they are cheaper, and very easy to apply.

Our Stains contain no water and are the only exterior Stains that do not contain kerosene.

PRICES are 40, 60 and 75 cents per Gallon According to Color.
SEND for Samples on Wood, and Circulars.

THE NATIONAL AUTOMATIC GAS GOVERNOR.

33 Per Cent
SAVING IN
GAS BILLS
GUARANTEED.

Enormous gas bills result from excessive gas pressure. When gas "blows" at the burner, it is being wasted *pro rata*. The higher the pressure, the less the illumination and the larger the gas bill.

The automatic action of Governer, attached to each individual meter, permits the consumer to control his own pressure regardless of the Gas Company, and obligates him to pay for only the minimum supply of Gas required for economic service.

Secures a steady and increased illumination, resulting from regular pressure and consequent perfect combustion of the gases, thus insuring a pure and healthful atmosphere.

Prevents the disagreeable whistling, blowing and smoking of burners, and consequent injury to ceilings, paintings, or drapery.

Greatly reduces "Fire Insurance Risks" incident to "Streaming" Gas Jets and Burners, and avoids the frequent danger and expense of broken globes.

Special discounts to Architects.

INVALUABLE TO ARCHITECTS.

Safe Building.

BY LOUIS De COPPET BERG.

Series I. Square 8vo. Illustrated with numerous formulæ, diagrams and tables. . $5.00.

"The author proposes to furnish to any earnest student the opportunity to acquire, so far as books will teach, the knowledge necessary to erect *safely* any building. First comes an introductory chapter on the Strength of Materials. This chapter gives the value of, and explains briefly, the different terms used, such as stress, strain, factor-of-safety, centre of gravity, neutral axis, moment of inertia, etc. There follows a series of chapters, each dealing with some part of a building, giving practical advice and numerous calculations of strength; for instance, chapters on foundations, walls and piers, columns, beams, roof and other trusses. spires, masonry, girders, inverted and floor-arches, sidewalks, stairs, chimneys, etc."

These papers are the work of a practising architect, and not of a mere bookmaker or theorist. Mr. Berg, aiming to make his work of the greatest value to the largest number, has confined himself in his mathematical demonstrations to the use of arithmetic, algebra, and plane geometry. In short these papers are in the highest sense practical and valuable.

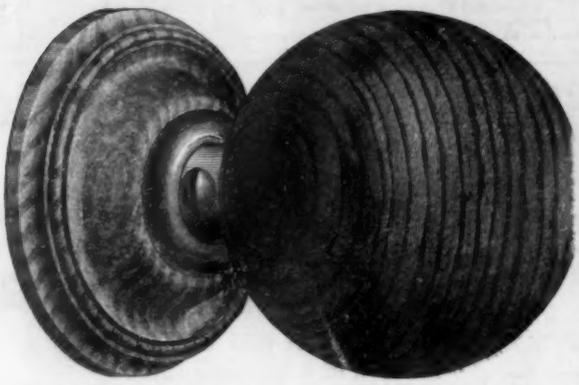
Bardsley's Patent Wood Door Knobs.



The engraving represents No. 101 Ball Knob, a style which is meeting with great favor, as it shows up the grain of the wood nicely, and makes a handsome appearance on a door. We furnish them with a bronze rose, when desired, instead of the wood rose shown in the engraving. Besides the regular woods which we carry in stock, we make the Knobs to match special trim, in such woods as Antique Oak, Red Oak, Sycamore, Hazel, Birch, Bird's Eye Maple, etc.

These goods are first-class in every respect, beautifully and durably finished, the trimmings are solid bronze, and every Knob is warranted not to come loose or give out in any way.

Price List on application.

A SUGGESTION.

ARCHITECTS AND BUILDERS

Don't specify simply old style tin when wanting the ***best that can be made.*** Have the specifications read as follows: "The Genuine Taylor 'Old Style' brand Roofing Tin, guaranteed by N. & G. Taylor Co., Philadelphia; every sheet stamped with brand, thickness, trade mark, and their name."

This Tin properly put on and taken care of will last as long as the building.

N. & G. TAYLOR CO.,

Originators of Guaranteed and Stamped Roofing Tin.

Established 1710. *PHILADELPHIA.* Eightieth Year.

INVALUABLE TO ARCHITECTS.

SAFE BUILDING.

BY LOUIS De COPPET BERG.

Series I. Square 8vo. Illustrated with numerous formulæ, diagrams and tables. Price, $5.00.

"The author proposes to furnish to any earnest student the opportunity to acquire, so far as books will teach, the knowledge necessary to erect *safely* any building. First comes an introductory chapter on the Strength of Materials. This chapter gives the value of, and explains briefly, the different terms used, such as stress, strain, factor-of-safety, centre of gravity, neutral axis, moment of inertia, etc. There follows a series of chapters, each dealing with some part of a building, giving practical advice and numerous calculations of strength; for instance, chapters on foundations, walls and piers, columns, beams, roof and other trusses, spires, masonry, girders, inverted and floor-arches, sidewalks, stairs, chimneys, etc."

These papers are the work of a practising architect, and not of a mere book-maker or theorist. Mr. Berg, aiming to make his work of the greatest value to the largest number, has confined himself in his mathematical demonstrations to the use of arithmetic, algebra, and plane geometry. In short these papers are in the highest sense practical and valuable.

Comments of the Press on a New Book

By MERCHANT & CO.

ENTITLED:

"A TIN ROOF."

A Valuable Book.

UNDER the title "*A Tin Roof*," Messrs. Merchant & Co., Philadelphia, have published a valuable work on the subject of roofing materials. No architect can afford to be without the book, as it treats very fully on a subject with which he should be conversant. The book has been compiled by one thoroughly versed in the subject of tin roofing, and it touches on different features of the subject which have heretofore never been published, and it is to be questioned whether the information could be obtained by architects from the roofing trade. The closing paragraph of the book is as follows: "We are prepared to prove that we were the first to introduce guaranteed plates and stamp every sheet with the name of the brand and thickness; and having also done away with the imperfect or waste sheets to further protect architects (who wish to specify and property owners who want to use the best), we feel that we have a right, under these circumstances, to ask that our guaranteed brands shall not be specified along with other brands in the market, which are inferior in quality, coating, weight and assortment." Architects throughout the country will do well to secure a copy of the book, which can be done by addressing Merchant & Co., Philadelphia.—*Philadelphia Evening Call*, February 18, 1889.

Something Worth Reading.

"*A Tin Roof*" is the title of a little book just issued by Messrs. Merchant & Co., 517 Arch Street, Philadelphia. The purpose of the publication is to supply to builders, architects, and the general public some exact information as to the best methods of constructing a tin roof and as to the right materials to be used to secure satisfactory and permanent results. We especially recommend the book, which is intended for gratuitous distribution, to mill-owners. They are very apt to entrust the matter of roofing wholly to builders, and they usually know very little about the character of the tin used or the excellence or defectiveness of the job. This pamphlet will help them to protect their interests. It is very explicit, perfectly comprehensible, and we think wholly trustworthy. It is quite profusely illustrated, and the cuts indicate processes of applying tin-roofing which insure excellence.—*Philadelphia Telegraph*, February 16, 1889.

MESSRS. MERCHANT & CO., of Philadelphia, are about to issue a work on the subject of tin roofing for the benefit of architects, which they have had compiled at considerable expense and labor by one thoroughly versed in the subject of tin roofing. It touches on different features of the subject which have heretofore never been published. While this work is issued partly as an advertisement of their guaranteed plates, it will be found to contain very valuable information. It is for distribution to those who want the information, though it is not their purpose to send it out broadcast, as it is too valuable a work in itself to go into the waste basket. The book will be nicely bound, and the title will be "*A Tin Roof.*" Messrs. Merchant & Co., have done all in their power to bring about the use of a better class of material, and were the first to introduce plates every sheet stamped with the brand and thickness, and as the doing away with the wasters, or imperfect sheets, has been the cause of great loss of profit to this concern, in their determination to keep faith with the architectural profession, they find that in some cases even leading architects are to-day simply using their brands as a figure-head, and are inserting in their specifications not only cheaper brands than theirs, but brands the wasters of which can be obtained and will be used. Consequently they have now taken the stand to simply ask the architect to drop their brands entirely if they are to be used with inferior goods, as they do not care to be held responsible by their clients when the roof proves inferior by reason of the use of cheaper material than they offer to the public.—From *Manufacturers' Record*, Baltimore, of February 9, 1889.

MISCELLANEOUS.

Amesbury, Mass.—The results of the severe fire of April last have entirely disappeared. The extensive and elegant factories replacing those destroyed (occupied, or about to be occupied) will be thrown open for a grand spring opening March 19, continuing throughout the week, under the auspices of the Board of Trade. In this opening every factory will participate. At this time all the latest styles will be displayed, and the large variety in quality and quantity of production will be arranged for the inspection of all who may accept a cordial invitation to attend. It is believed that every one who goes will enjoy and profit by the visit.

Friend St., Nos. 260-264, Ward 7, three-st'y brick mechanical building, flat roof, 40' x 70'; owner, Samuel Elliott; builder, A. Hathaway.

Cambridge St., No. 410, Ward 25, three-st'y frame club-house, pitch roof, 42' x 51'; owners, Allston Club.

COMPETITION.

HOTEL. [At Dunkirk, N. Y.]

DUNKIRK, N. Y., March 6, 1889.

The Young Men's Building Association, limited, invite preliminary plans for a hotel building, to be erected in the city of Dunkirk during season of 1889. Building to be of brick, and cost not to exceed $40,000. For particulars, address

690 H. C. HEQUEMBOURG, Secretary.

PROPOSALS.

March 8th, 1889. Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until 2 o'clock P. M. on the 2d day of April, 1889, for the labor and materials required in the erection and completion of the iron roof, ironwork of ceilings, stairway in tower, etc., for the United States Court-House and Post-Office building at Pittsburgh, Pa., in accordance with the specification and drawings, copies of which may be seen at this office; the office of the Superintendent; the Builders' Exchanges at Baltimore, Md., Cincinnati, O., and Detroit, Mich.; Builders' and Traders' Exchanges at Chicago, Ill., and Louisville, Ky.; Mechanics' and Traders' Exchange, New York City; Engineers' Society of Western Pennsylvania, Pittsburgh, Pa.; and the Master Builders' Exchange at Philadelphia, Pa. Each bid must be accompanied by a certified check for $500. The Supervising Architect will furnish a limited number of copies of the specification and drawings, at $3 a set, upon receipt of that sum in post-office money-order, drawn to the order of the Treasurer of the United States. WILL. A. FRERET, Supervising Architect. 690

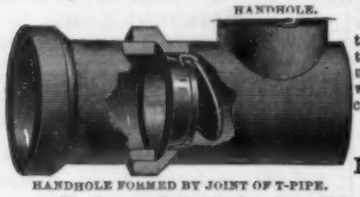
Sanitary Appliances

Protect yourselves against Sewer Gas and Back Water by using

The Palmer Pat. Sanitary Sewer-Trap or Safety-Valve.

Manufactured by THE ERIE CITY FOUNDRY, ERIE, PA.

Infinitely superior to any "Water Trap" ever made. Sizes for 3, 4, 6, 8, and 9 in. pipe



This cut represents our House-Connection Valve set in the hub end of a piece of clay pipe. By trimming off the flange of the valve, a very easy matter, it can be used in iron pipe as well. It is made of indestructable white composition metal which can not rust. Valve cannot fail to act.

Descriptive Circular sent on application.

For Sale by all Dealers in Plumbers' Supplies.

We also manufacture an Iron Street Valve in two sizes, viz: 10 in. by 15 in., and 18in. by 18 in.
